APPENDIX G	Project Variances No project variances were completed during this reporting period	G-1

LIST OF APPENDICES

APPENDIX		VOLUME NO.
A	Site Activity Maps and Tables	1
B	Water Analytical Data	2
C	Potentiometric Surface Contour Maps	3
D	Hydrographs	3
E	Water Level Measurements	3
F	Summary of Major/Significant Meetings	3
G	Project Variances	3

LIST OF ABBREVIATIONS

BNAs	Base/neutral and acid extractable priority pollutants
CPT/HP	Cone Penitrometer/Hydropunch™
ERM-West	Environmental Resources Management West, Inc.
ESA	Earth Science Associates, Inc.
DCA	Dichloroethane
DCE	Dichloroethene
EPA	Environmental Protection Agency
FS	Feasibility Study
GC	Gas chromatograph
gpm	Gallons per minute
IRP	Installation Restoration Program
IT	IT Corporation
ID	Internal Diameter
MEW	Middlefield - Ellis - Whisman
NAS	Naval Air Station
NTU	Nephelometric turbidity unit
PCBs	Polychlorinated biphenyls
ppb	Parts per billion
ppm	Parts per million
RI	Remedial Investigation
RWQCB	Regional Water Quality Control Board
SWAT	Solid Waste Assessment Test
TCA	Trichloroethane
TCE	Trichloroethene
TDS	Total dissolved solids
TIP	Total ionizables present, photovac, photoionization detector/pump
TL-#	Transect lines
TPHC	Total petroleum hydrocarbons
VOC	Volatile organic compounds

ANALYTICAL DATA

SECTION 4.0

PAGE

Site 4 Analytical Results

Table 4-3, Site 4 Analytical Results Summary.....4.1-1

Results of Water Sample Analyses Site 4, Phase 1.....4.2-1

FOOTNOTES FOR DATA TABLES

a	- No entry indicates none detected; see complete data tables for sample detection limits. Concentrations are reported as specified in the heading unless otherwise indicated under Quantitation Limits.
d	- One or more unknown compounds were detected; see complete data tables for retention time and concentrations.
j	- Indicates an estimated value. For organics, equivalent to "j" qualifier defined in EPA CLP SOW for Organic Analyses, Rev. 7/87, indicating the mass spectral data meets the identification criteria but the result is less than the sample quantitation limit and greater than zero. For inorganics, equivalent to "B" qualifier defined in EPA CLP SOW for Inorganic Analyses, Rev. 7/88, indicating the reported value is less than the Quantitation Limit and greater than or equal to the instrument detection limit.
B	- Equivalent to "B" qualifier defined and EPA CLP SOW for Organic Analyses, Rev. 7/87. The analyte is found in the associated blank and indicates possible/probable blank contamination.
E	- Indicates an estimated value; compound concentration exceeded the calibration range of the GC/MS instrument for the specific analysis. Sample could not be rerun at a higher dilution as there was potential damage to the instrument due to the sample matrix.
A	- Equivalent to "A" qualifier defined in EPA CLP SOW for Organic Analyses, Rev. 7/87. Indicates that a TIC is a suspected aldol-condenstion product which is the result of interaction between reagents required for sample preparation and compounds present in the sample matrix.
Unknown @ 9.07	- Indicates the retention time for the unknown TIC.
TIC	- Tentatively Identified Compound. Concentration is estimated assuming a 1:1 response. TICs are not target compounds and are reported only if detected in the sample.
NA	- Not Analyzed.
TRIP BLANK	- A trip blank is an HPLC/ASTM - Type 2 grade water sample. This sample is carried into the field by samplers along with actual samples, shipped to the laboratory, and analyzed exactly like all other samples. Trip blanks were analyzed for volatile organic compounds only.
DUP	- A duplicate sample is collected in parallel with its original sample. The procedure for obtaining the duplicate is identical to its original. The same container type, preservative, and sampling technic are used.
SPLIT	- A split sample is obtained at the identical time and place of the original. When collecting the split , the sample is divided equally between the sample containers of the original and its split sample.
EQUIPMENT RINSE	- After decontamination has been performed on sampling equipment and before equipment is used, a reagent grade water rinsate is collected from the piece of equipment.
FIELD BLANK	- A field blank is HPLC/ASTM - Type 2 grade water; the blank is transferred from its original container to a sample container at the sample location to expose the water to ambient contaminants that would be measured during lab analysis.
ND	- None detected, analyte not detected at or above the stated detection limit.
µg/L	- Micrograms / Liter.

Quantitation Limits are specified in the Remedial Investigation Work Plan, Naval Air Station, Moffett Field, California, Volume II: Sampling and analysis plan, March, 1988.

Results of Water Sample Analyses Site 8, Phase 1.....8.2-1

FOOTNOTES FOR DATA TABLES

a	- No entry indicates none detected; see complete data tables for sample detection limits. Concentrations are reported as specified in the heading unless otherwise indicated under Quantitation Limits.
d	- One or more unknown compounds were detected; see complete data tables for retention time and concentrations.
j	- Indicates an estimated value. For organics, equivalent to "j" qualifier defined in EPA CLP SOW for Organic Analyses, Rev. 7/87, indicating the mass spectral data meets the identification criteria but the result is less than the sample quantitation limit and greater than zero. For inorganics, equivalent to "B" qualifier defined in EPA CLP SOW for Inorganic Analyses, Rev. 7/88, indicating the reported value is less than the Quantitation Limit and greater than or equal to the instrument detection limit.
B	- Equivalent to "B" qualifier defined and EPA CLP SOW for Organic Analyses, Rev. 7/87. The analyte is found in the associated blank and indicates possible/probable blank contamination.
E	- Indicates an estimated value; compound concentration exceeded the calibration range of the GC/MS instrument for the specific analysis. Sample could not be rerun at a higher dilution as there was potential damage to the instrument due to the sample matrix.
A	- Equivalent to "A" qualifier defined in EPA CLP SOW for Organic Analyses, Rev. 7/87. Indicates that a TIC is a suspected aldol-condenstion product which is the result of interaction between reagents required for sample preparation and compounds present in the sample matrix.
Unknown @ 9.07	- Indicates the retention time for the unknown TIC.
TIC	- Tentatively Identified Compound. Concentration is estimated assuming a 1:1 response. TICs are not target compounds and are reported only if detected in the sample.
NA	- Not Analyzed.
TRIP BLANK	- A trip blank is an HPLC/ASTM - Type 2 grade water sample. This sample is carried into the field by samplers along with actual samples, shipped to the laboratory, and analyzed exactly like all other samples. Trip blanks were analyzed for volatile organic compounds only.
DUP	- A duplicate sample is collected in parallel with its original sample. The procedure for obtaining the duplicate is identical to its original. The same container type, preservative, and sampling technic are used.
SPLIT	- A split sample is obtained at the identical time and place of the original. When collecting the split , the sample is divided equally between the sample containers of the original and its split sample.
EQUIPMENT RINSE	- After decontamination has been performed on sampling equipment and before equipment is used, a reagent grade water rinsate is collected from the piece of equipment.
FIELD BLANK	- A field blank is HPLC/ASTM - Type 2 grade water; the blank is transferred from its original container to a sample container at the sample location to expose the water to ambient contaminants that would be measured during lab analysis.
ND	- None detected, analyte not detected at or above the stated detection limit.
µg/L	- Micrograms / Liter.

Quantitation Limits are specified in the Remedial Investigation Work Plan, Naval Air Station, Moffett Field, California, Volume II: Sampling and analysis plan, March, 1988.

FOOTNOTES FOR DATA TABLES

a	- No entry indicates none detected; see complete data tables for sample detection limits. Concentrations are reported as specified in the heading unless otherwise indicated under Quantitation Limits.
d	- One or more unknown compounds were detected; see complete data tables for retention time and concentrations.
j	- Indicates an estimated value. For organics, equivalent to "J" qualifier defined in EPA CLP SOW for Organic Analyses, Rev. 7/87, indicating the mass spectral data meets the identification criteria but the result is less than the sample quantitation limit and greater than zero. For inorganics, equivalent to "B" qualifier defined in EPA CLP SOW for Inorganic Analyses, Rev. 7/88, indicating the reported value is less than the Quantitation Limit and greater than or equal to the instrument detection limit.
B	- Equivalent to "B" qualifier defined and EPA CLP SOW for Organic Analyses, Rev. 7/87. The analyte is found in the associated blank and indicates possible/probable blank contamination.
E	- Indicates an estimated value; compound concentration exceeded the calibration range of the GC/MS instrument for the specific analysis. Sample could not be rerun at a higher dilution as there was potential damage to the instrument due to the sample matrix.
A	- Equivalent to "A" qualifier defined in EPA CLP SOW for Organic Analyses, Rev. 7/87. Indicates that a TIC is a suspected aldol-condenstion product which is the result of interaction between reagents required for sample preparation and compounds present in the sample matrix.
Unknown @ 9.07	- Indicates the retention time for the unknown TIC.
TIC	- Tentatively Identified Compound. Concentration is estimated assuming a 1:1 response. TICs are not target compounds and are reported only if detected in the sample.
NA	- Not Analyzed.
TRIP BLANK	- A trip blank is an HPLC/ASTM - Type 2 grade water sample. This sample is carried into the field by samplers along with actual samples, shipped to the laboratory, and analyzed exactly like all other samples. Trip blanks were analyzed for volatile organic compounds only.
DUP	- A duplicate sample is collected in parallel with its original sample. The procedure for obtaining the duplicate is identical to its original. The same container type, preservative, and sampling technic are used.
SPLIT	- A split sample is obtained at the identical time and place of the original. When collecting the split , the sample is divided equally between the sample containers of the original and its split sample.
EQUIPMENT RINSE	- After decontamination has been performed on sampling equipment and before equipment is used, a reagent grade water rinsate is collected from the piece of equipment.
FIELD BLANK	- A field blank is HPLC/ASTM - Type 2 grade water; the blank is transferred from its original container to a sample container at the sample location to expose the water to ambient contaminants that would be measured during lab analysis.
ND	- None detected, analyte not detected at or above the stated detection limit.
µg/L	- Micrograms / Liter.

Quantitation Limits are specified in the Remedial Investigation Work Plan, Naval Air Station, Moffett Field, California, Volume II: Sampling and analysis plan, March, 1988.

FOOTNOTES FOR DATA TABLES

a	- No entry indicates none detected; see complete data tables for sample detection limits. Concentrations are reported as specified in the heading unless otherwise indicated under Quantitation Limits.
d	- One or more unknown compounds were detected; see complete data tables for retention time and concentrations.
j	- Indicates an estimated value. For organics, equivalent to "j" qualifier defined in EPA CLP SOW for Organic Analyses, Rev. 7/87, indicating the mass spectral data meets the identification criteria but the result is less than the sample quantitation limit and greater than zero. For inorganics, equivalent to "B" qualifier defined in EPA CLP SOW for Inorganic Analyses, Rev. 7/88, indicating the reported value is less than the Quantitation Limit and greater than or equal to the instrument detection limit.
B	- Equivalent to "B" qualifier defined and EPA CLP SOW for Organic Analyses, Rev. 7/87. The analyte is found in the associated blank and indicates possible/probable blank contamination.
E	- Indicates an estimated value; compound concentration exceeded the calibration range of the GC/MS instrument for the specific analysis. Sample could not be rerun at a higher dilution as there was potential damage to the instrument due to the sample matrix.
A	- Equivalent to "A" qualifier defined in EPA CLP SOW for Organic Analyses, Rev. 7/87. Indicates that a TIC is a suspected aldol-condenstion product which is the result of interaction between reagents required for sample preparation and compounds present in the sample matrix.
Unknown @ 9.07	- Indicates the retention time for the unknown TIC.
TIC	- Tentatively Identified Compound. Concentration is estimated assuming a 1:1 response. TICs are not target compounds and are reported only if detected in the sample.
NA	- Not Analyzed.
TRIP BLANK	- A trip blank is an HPLC/ASTM - Type 2 grade water sample. This sample is carried into the field by samplers along with actual samples, shipped to the laboratory, and analyzed exactly like all other samples. Trip blanks were analyzed for volatile organic compounds only.
DUP	- A duplicate sample is collected in parallel with its original sample. The procedure for obtaining the duplicate is identical to its original. The same container type, preservative, and sampling technic are used.
SPLIT	- A split sample is obtained at the identical time and place of the original. When collecting the split , the sample is divided equally between the sample containers of the original and its split sample.
EQUIPMENT RINSE	- After decontamination has been performed on sampling equipment and before equipment is used, a reagent grade water rinsate is collected from the piece of equipment.
FIELD BLANK	- A field blank is HPLC/ASTM - Type 2 grade water; the blank is transferred from its original container to a sample container at the sample location to expose the water to ambient contaminants that would be measured during lab analysis.
ND	- None detected, analyte not detected at or above the stated detection limit.
µg/L	- Micrograms / Liter.

Quantitation Limits are specified in the Remedial Investigation Work Plan, Naval Air Station, Moffett Field, California, Volume II: Sampling and analysis plan, March, 1988.

FOOTNOTES FOR DATA TABLES

a	- No entry indicates none detected; see complete data tables for sample detection limits. Concentrations are reported as specified in the heading unless otherwise indicated under Quantitation Limits.
d	- One or more unknown compounds were detected; see complete data tables for retention time and concentrations.
j	- Indicates an estimated value. For organics, equivalent to "j" qualifier defined in EPA CLP SOW for Organic Analyses, Rev. 7/87, indicating the mass spectral data meets the identification criteria but the result is less than the sample quantitation limit and greater than zero. For inorganics, equivalent to "B" qualifier defined in EPA CLP SOW for Inorganic Analyses, Rev. 7/88, indicating the reported value is less than the Quantitation Limit and greater than or equal to the instrument detection limit.
B	- Equivalent to "B" qualifier defined and EPA CLP SOW for Organic Analyses, Rev. 7/87. The analyte is found in the associated blank and indicates possible/probable blank contamination.
E	- Indicates an estimated value; compound concentration exceeded the calibration range of the GC/MS instrument for the specific analysis. Sample could not be rerun at a higher dilution as there was potential damage to the instrument due to the sample matrix.
A	- Equivalent to "A" qualifier defined in EPA CLP SOW for Organic Analyses, Rev. 7/87. Indicates that a TIC is a suspected aldol-condenstion product which is the result of interaction between reagents required for sample preparation and compounds present in the sample matrix.
Unknown @ 9.07	- Indicates the retention time for the unknown TIC.
TIC	- Tentatively Identified Compound. Concentration is estimated assuming a 1:1 response. TICs are not target compounds and are reported only if detected in the sample.
NA	- Not Analyzed.
TRIP BLANK	- A trip blank is an HPLC/ASTM - Type 2 grade water sample. This sample is carried into the field by samplers along with actual samples, shipped to the laboratory, and analyzed exactly like all other samples. Trip blanks were analyzed for volatile organic compounds only.
DUP	- A duplicate sample is collected in parallel with its original sample. The procedure for obtaining the duplicate is identical to its original. The same container type, preservative, and sampling technic are used.
SPLIT	- A split sample is obtained at the identical time and place of the original. When collecting the split , the sample is divided equally between the sample containers of the original and its split sample.
EQUIPMENT RINSE	- After decontamination has been performed on sampling equipment and before equipment is used, a reagent grade water rinsate is collected from the piece of equipment.
FIELD BLANK	- A field blank is HPLC/ASTM - Type 2 grade water; the blank is transferred from its original container to a sample container at the sample location to expose the water to ambient contaminants that would be measured during lab analysis.
ND	- None detected, analyte not detected at or above the stated detection limit.
µg/L	- Micrograms / Liter.

Quantitation Limits are specified in the Remedial Investigation Work Plan, Naval Air Station, Moffett Field, California, Volume II: Sampling and analysis plan, March, 1988.

FOOTNOTES FOR DATA TABLES

a	- No entry indicates none detected; see complete data tables for sample detection limits. Concentrations are reported as specified in the heading unless otherwise indicated under Quantitation Limits.
d	- One or more unknown compounds were detected; see complete data tables for retention time and concentrations.
j	- Indicates an estimated value. For organics, equivalent to "J" qualifier defined in EPA CLP SOW for Organic Analyses, Rev. 7/87, indicating the mass spectral data meets the identification criteria but the result is less than the sample quantitation limit and greater than zero. For inorganics, equivalent to "B" qualifier defined in EPA CLP SOW for Inorganic Analyses, Rev. 7/88, indicating the reported value is less than the Quantitation Limit and greater than or equal to the instrument detection limit.
B	- Equivalent to "B" qualifier defined and EPA CLP SOW for Organic Analyses, Rev. 7/87. The analyte is found in the associated blank and indicates possible/probable blank contamination.
E	- Indicates an estimated value; compound concentration exceeded the calibration range of the GC/MS instrument for the specific analysis. Sample could not be rerun at a higher dilution as there was potential damage to the instrument due to the sample matrix.
A	- Equivalent to "A" qualifier defined in EPA CLP SOW for Organic Analyses, Rev. 7/87. Indicates that a TIC is a suspected aldol-condenstion product which is the result of interaction between reagents required for sample preparation and compounds present in the sample matrix.
Unknown @ 9.07	- Indicates the retention time for the unknown TIC.
TIC	- Tentatively Identified Compound. Concentration is estimated assuming a 1:1 response. TICs are not target compounds and are reported only if detected in the sample.
NA	- Not Analyzed.
TRIP BLANK	- A trip blank is an HPLC/ASTM - Type 2 grade water sample. This sample is carried into the field by samplers along with actual samples, shipped to the laboratory, and analyzed exactly like all other samples. Trip blanks were analyzed for volatile organic compounds only.
DUP	- A duplicate sample is collected in parallel with its original sample. The procedure for obtaining the duplicate is identical to its original. The same container type, preservative, and sampling technic are used.
SPLIT	- A split sample is obtained at the identical time and place of the original. When collecting the split , the sample is divided equally between the sample containers of the original and its split sample.
EQUIPMENT RINSE	- After decontamination has been performed on sampling equipment and before equipment is used, a reagent grade water rinsate is collected from the piece of equipment.
FIELD BLANK	- A field blank is HPLC/ASTM - Type 2 grade water; the blank is transferred from its original container to a sample container at the sample location to expose the water to ambient contaminants that would be measured during lab analysis.
ND	- None detected, analyte not detected at or above the stated detection limit.
µg/L	- Micrograms / Liter.

Quantitation Limits are specified in the Remedial Investigation Work Plan, Naval Air Station, Moffett Field, California, Volume II: Sampling and analysis plan, March, 1988.
