

This NOTICE is a follow-up request to a previous letter sent in early September 2020 requesting permission to allow the Navy to sample your private drinking water well, if you have one.

The Navy is offering to test your drinking water well, at no cost to you, for certain per- and polyfluoroalkyl substances (PFAS) that may be present in your drinking water as a result of Navy activities at the nearby NSA Cutler Fire Station. As part of this investigation, the Navy is asking area residents to allow sampling for the presence of PFAS in private drinking water wells in a designated area near NSA Cutler Fire Station. There is no legal requirement for the Navy to conduct drinking water testing; it is a voluntary measure recommended by the Navy because the water quality for our off-property neighbors is a priority. This sampling would follow COVID-19 safety protocols to protect you and our samplers.

For more information on this project, please visit the Virtual Open House webpage at <https://go.usa.gov/xfGMx> or the NSA Cutler PFAS webpage at <https://go.usa.gov/xwfdW>. To schedule testing of your drinking water, please call 833-397-3778 (833-DWREQST).
