COMPLETION REPORT FOR INTERIM REMEDIAL ACTION VOLUME 1 OF 3 NTC ORLANDO FL

8/1/1999

NAVY SHIPBUILIDNG, CONVERSION AND REPAIR

00449

07.08.17.0002

COMPLETION REPORT

INTERIM REMEDIAL ACTION
SA 17, 18, 23, 35, 37, 40, 42, and OU3 & 4
NAVAL TRAINING CENTER and McCOY ANNEX
ORLANDO, FLORIDA

VOL. 1 of 3

Prepared for:

DEPARTMENT OF THE NAVY
SOUTHERN DIVISION
NAVAL FACILITIES ENGINEERING COMMAND
CHARLESTON SC

Prepared by:

Supervisor of Shipbuilding, Conversion and Repair,
USN, (SUPSHIP) Portsmouth Va.,
Environmental Detachment Charleston, S.C.
1899 North Hobson Ave.
North Charleston, SC 29405-2106

August 18, 1999

Ser: 653
AUG 18 1999

MEMORANDUM

From: Director, Supervisor of Shipbuilding, Conversion and Repair, USN Portsmouth Va., Environmental Detachment, Charleston, SC (SPORTENVDETCHASN)
To: Southern Division Naval Facilities Engineering Command

Subj: INTERIM REMEDIAL ACTION COMPLETION REPORT FOR STUDY AREAS 17, 18, 23, 35, 37, 40, 42, and OU3 & 4

Ref: (a) Statement of Work for Project O98021
Naval Training Center and McCoy Annex, Orlando, Florida

Encl: (1) Interim Remedial Action Completion Report

1. SPORTENVDETCHASN was requested per reference (a) to proceed with the execution of Interim Remedial Action Work Plan for Study Areas 17, 18, 23, 35, 37, 40, 42, and OU3 & 4 at the Naval Training Center and McCoy Annex, Orlando, Florida. The scope of this work plan included the excavation and disposal of contaminated soil.

2. Southern Division is requested to distribute copies of this report to the Florida Department of Environmental Protection, the United States Environmental Protection Agency, Harding Lawson Associates, Inc. and TetraTech NUS, Inc. Questions concerning these plans should be addressed to A.J. Moyer at (843) 743-6777 ext. 137 or Kevin Tunstall at ext. 227.

Respectfully,

for E. R. Dearhart

copy to:
File

To: Orlando Project Team Members 8/27/99

Enclosed is Volumes II and III and changes to Volume I.

In Volume I please make the following changes:

- Insert Figure 5 into Tab F
- Replace page H1-2
- Remove Figure 2 and hand drawn sketch from Tab H
- Insert Figures 2, 3, 4, and 5 into Tab H
- Insert sampling data into Appendix H2 directly after the "Confirmation Samples" page.

Substitutions made 9/8/99 -SDM

Thanks to everyone who assisted me/us with this project.

Alan J Moyer

A. J.

1. INTRODUCTION

1.1 OBJECTIVE Southern Division Naval Facilities Engineering Command (SOUTHDIV) tasked Supervisor of Shipbuilding, Conversion and Repair, Portsmouth, Va. Environmental Detachment Charleston (DET) to provide an Interim Remedial Action (IRA) Work Plan for Study Areas (SA) 17, 18, 23, 35, 37, 40, 42, and Operable Units (OU) 3 and 4 at the Naval Training Center (NTC) and the McCoy Annex, Orlando, Florida. The objective of this IRA was to excavate and dispose of contaminated soils at these areas.

The Remedial Goal Options (RGO) for these sites are as listed in the Florida Department of Environmental Protection (FDEP) Soil Cleanup Target Levels (SCTL) dated 30 April 1998, or the Risk-Based Concentration Table, USEPA Region III, dated 01 Oct 1998 (RBC), whichever specifies the stricter criteria.

Individual site excavation boundaries and sampling requirements are consistent with the Base Realignment and Closure (BRAC) Work Plans for IRAs prepared by Harding Lawson Associates. (HLA).

All areas were backfilled with Florida-certified clean fill. See Appendix A2 for sampling documentation of the backfill.

Waste was characterized on each individual site based on process knowledge obtained from the Clean Contractors investigative sampling. Additional waste characterization analysis was performed by the DET as needed to verify the solid waste did not exceed the maximum concentration for the toxicity characteristic and to satisfy additional disposal/treatment requirements requested by the Treatment Storage Disposal Facility (TSDF) receiving the waste.

Separate Completion Reports are provided in Tabs A thru I of this document for each study area.

STUDY AREA 17

1. INTRODUCTION

1.1 STUDY AREA 17

SA 17 is located in the east-central portion of the McCoy Annex (Figure 1). The SA includes several buildings and a motor pool area. The motor pool area was used for vehicle and materials/storage (Figure 2).

1.2 SA 17 INTERIM REMEDIAL ACTION

SOUTHDIV tasked the DET to perform an IRA for this site. The objective of the IRA was to excavate and dispose of soil contaminated with Polynuclear Aromatic Hydrocarbon (PAHs). The excavation was to continue until the sampling program indicated with reasonable confidence that the concentrations of contaminants at the site were less than non-residential limits specified by FDEP SCG, dated 30 April 1998 or USEPA Region III, dated 01 October 1998, whichever specifies the stricter criteria.

1.2.1 SA 17 Interim Remedial Action Execution Summary

The execution of this IRA consisted of excavating an area approximately 300′ x 100′ to a depth of 2′ (Figure 3). Soil removed from the site was characterized as non-hazardous and was sent to a treatment facility for incineration. Confirmation samples were collected from the sidewalls upon completion of the excavation and tested for PAHs. The results of these samples were all less than the RGOs.

2.0 INTERIM REMEDIAL ACTION EXCECUTION

2.1 ACTIONS PERFORMED BY THE INTERIM REMEDIAL ACTION WORK PLAN

Actions performed are listed below

- Collection of waste characterization samples
- Installation of approximately 240′ of silt fencing for erosion control
- Excavation and disposal of an area approximately 300′ x 100′ and 2′ in depth
- Collection of confirmatory samples along each sidewall for analysis of PAHs
- Restoration of site by backfilling, grading to surrounding area, and hydroseeding

2.2 OBSERVATIONS NOTES

2.2.1 Soil Conditions

From ground surface to 6 inches below was run of crush. From 6 inches below ground surface to the bottom of the excavation the soil was dark silty sand.

3.0 INTERIM REMEDIAL ACTION OUTCOME

3.1 SITE CONDITIONS FOLLOWING COMPLETION OF WORK

Following completion of work, the DET had removed 4,374 tons of PAH contaminated soil. The site was backfilled, graded to surrounding area and hydroseeded. Site photographs are included in Appendix A1.

4.0 SAMPLING

4.1 CONFIRMATION SAMPLING

Upon completion of work a confirmation sample was taken approximately every 50′ on each sidewall and tested for PAHs (Figure 3). See appendix A2 for sampling documentation.

4.2 WASTE CHARACTERIZATION SAMPLING

Thirteen waste characterization (samples 17S001 thru 17S010, SA17S030, 99SPORT0173-27 & 28) were taken and analyzed for RCRA 8 metals, VOC 8021, and FLPRO. See appendix A2 for sampling documentation.

5.0 WASTE GENERATION

5.1 Non-Hazardous Waste

A total of 4,374 tons of non-hazardous PAH contaminated soil was disposed of to a permitted treatment, storage and disposal facility. Waste Manifests are in Appendix A3.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed
in accordance with General Engineering Laboratories
standard operating procedures. Please direct
any questions to your Project Manager, Elise Hanson at 843-556-8171.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed in accordance with General Engineering Laboratories standard operating procedures. Please direct any questions to your Project Manager, Elise Hanson at 843-556-8171.

M 2	EPA 3550

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed
in accordance with General Engineering Laboratories
standard operating procedures. Please direct
any questions to your Project Manager, Elise Hanson at 843-556-8171.

M 1	EPA 8270C
M 2	EPA 3550

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed
in accordance with General Engineering Laboratories
standard operating procedures. Please direct
any questions to your Project Manager, Elise Hanson at 843-556-8171.

otes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed in accordance with General Engineering Laboratories standard operating procedures. Please direct any questions to your Project Manager, Elise Hanson at 843-556-8171.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed in accordance with General Engineering Laboratories standard operating procedures. Please direct any questions to your Project Manager, Elise Hanson at 843-556-8171.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
I indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

STUDY AREA 18

1. INTRODUCTION

1.1 STUDY AREA 18

SA 18 is located in the central portion of the McCoy Annex (Figure 1). The SA includes several buildings and a paved storage area. The paved storage area was used for the storage of gas cylinders, paints, appliances and recreational vehicles.

1.2 SA 18 INTERIM REMEDIAL ACTION

SOUTHDIV tasked the DET to perform an IRA for this site. The objective of the IRA was to excavate and dispose of soil contaminated with PAHs. The excavation was to continue until the sampling program indicated with reasonable confidence that the concentrations of contaminants at the site were less than non-residential limits specified by FDEP SCG, dated 30 April 1998 or USEPA Region III, dated 01 October 1998, whichever specifies the stricter criteria.

1.2.1 SA 18 Interim Remedial Action Execution Summary

The execution of this IRA consisted of excavating an area approximately 20′ x 20′ to a depth of 2′ at HLA sample location 18S008 (Figure 2). Soil removed from the site was characterized as non-hazardous and was sent to a treatment facility for incineration. A Confirmation sample was collected from each sidewall upon completion of the excavation and tested for PAHs. The results of these samples were all less than the RGOs.

2.0 INTERIM REMEDIAL ACTION EXCECUTION

2.1 ACTIONS PERFORMED BY THE INTERIM REMEDIAL ACTION WORK PLAN

Actions performed are listed below

- Collection of a waste characterization sample
- Removal of approximately 20´x 2´ of asphalt from the western side of excavation
- Excavation and disposal of an area approximately 20´ x 20´ and 2´ in depth
- Collection of confirmatory samples from each sidewall for analysis of PAHs
- Restoration of site by backfilling, grading to surrounding area, and hydroseeding

2.2 OBSERVATIONS NOTES

2.2.1 Soil Conditions

From ground surface to the bottom of the excavation the soil was dark silty sand.

3.0 INTERIM REMEDIAL ACTION OUTCOME

3.1 SITE CONDITIONS FOLLOWING COMPLETION OF WORK

Following completion of work, the DET had removed 30 tons of PAH contaminated soil. The site was backfilled, graded to surrounding area and hydroseeded. Site photographs are included in Appendix B1.

4.0 SAMPLING

4.1 CONFIRMATION SAMPLING

Upon completion of work a confirmation sample was taken on each sidewall and tested for PAHs (Figure 3). See appendix B2 for sampling documentation.

4.2 WASTE CHARACTERIZATION SAMPLING

Waste characterization sample SA-18008 was taken and analyzed for TCLP pesticides. See appendix B2 for sampling documentation.

5.0 WASTE GENERATION

5.1 Non-Hazardous Waste A total of 30 tons of non-hazardous PAH contaminated soil was disposed of to a permitted treatment, storage and disposal facility. Waste Manifests are in appendix B3.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed in accordance with General Engineering Laboratories standard operating procedures. Please direct any questions to your Project Manager, Elise Hanson at 843-556-8171.

STUDY AREA 23

1. INTRODUCTION

1.1 STUDY AREA 23

SA 23 is located in the northeast corner of the McCoy Annex (Figure 1). The SA includes a former swimming pool and pool house which were demolished in the 1980's. A seven foot high, raised earthen area covered with grass now exists on the site. A twelve inch diameter metal drain pipe extends from the base of the earthen area to the adjacent drainage ditch east of the mound (Figure 2).

1.2 SA 23 INTERIM REMEDIAL ACTION

SOUTHDIV tasked the DET to perform an IRA for this site. The objective of the IRA was to excavate and dispose of soil contaminated with PAHs.

1.2.1 SA 23 Interim Remedial Action Execution Summary

The execution of this IRA consisted of excavating an area approximately 5´ x 5´ to a depth of 2´ at HLA sample location 23S005 (Figure 3). Soil removed from the site was characterized as non-hazardous and was sent to a treatment facility for incineration.

2.0 INTERIM REMEDIAL ACTION EXCECUTION

2.1 ACTIONS PERFORMED BY THE INTERIM REMEDIAL ACTION WORK PLAN

Actions performed are listed below

- Collection of a waste characterization sample
- Excavation and disposal of an area approximately 5′ x 5′ to a depth of 6 inches
- Sealed off drainage pipe by plugging/filling end with concrete

2.2 OBSERVATIONS NOTES

2.2.1 Soil Conditions

From ground surface to the bottom of the excavation the soil was dark silty sand.

2.3 PLAN MODIFICATIONS AND JUSTIFICATION

The interim remedial action work plan specified the removal of soil to a depth of 2′ at sample point 23S005. However, upon the start of excavation it was discovered that a concrete splash block (6′ x 5′ x 6 inches thick) existed. The Orlando Partnering Team (OPT) instructed the DET to excavate and dispose of the soil atop the splash block.

3.0 INTERIM REMEDIAL ACTION OUTCOME

3.1 SITE CONDITIONS FOLLOWING COMPLETION OF WORK

Following completion of work, the DET had removed 1 ton of PAH contaminated soil. The drainage pipe was plugged and the ditch was graded to surrounding area. Site photographs are included in Appendix C1.

4.0 SAMPLING

4.1 CONFIRMATION SAMPLING

Confirmation sampling was not required to be taken.

4.2 WASTE CHARACTERIZATION SAMPLING

Waste characterization sample S23005 was taken and analyzed for TCLP metals. See appendix C2 for sampling documentation.

5.0 WASTE GENERATION

5.1 Non-Hazardous Waste

One ton of non-hazardous PAH contaminated soil was disposed of to a permitted treatment, storage and disposal facility. Waste Manifests are in appendix C3.

SA 35 ESSR

STUDY AREA 35

1. INTRODUCTION

1.1 STUDY AREA 35

SA 35 is located on the Main base, Naval Training Center, Orlando (Figure 1). Most of the site consists of a large paved parking area and Buildings 2078 and 2079. Building 2078 is a former aircraft hangar used since 1968 for vehicle maintenance and Building 2079 was used to store tires, batteries, and hazardous materials (Figure 2). See Figures 3, 4, and 5 for the locations of excavation areas "A" thru "T" in SA 35.

1.2 SA 35 INTERIM REMEDIAL ACTION

SOUTHDIV tasked the DET to perform an IRA for excavation areas "A" thru "T". The objective of the IRA was to excavate and dispose of soil contaminated with Total Recoverable Petroleum Hydrocarbons (TRPH) and/or arsenic. The excavation was to continue until the sampling program indicated with reasonable confidence that the concentrations of contaminants at the site were less than residential limits specified by FDEP SCG, dated 30 April 1998 or USEPA Region III, dated 01 October 1998, whichever specifies the stricter criteria.

1.2.1 SA 35 Interim Remedial Action Execution Summary

The execution of this IRA is discussed in the following sections:

1.2.1.1 SA 35 Area A

The execution of this IRA consisted of excavating an area approximately 9′ x 25′ to a depth of 2′ at HLA sample point 35S005 (Figure 3). Soil removed from the site was characterized as non-hazardous and was sent to a treatment facility for incineration. Confirmation samples were collected from the sidewalls upon completion of the excavation and tested for TRPH and arsenic. The results of these samples were all less than the RGOs except for the sample along the side of Building 2079 (sample SA35SA11) as shown in Figure 6. Sample SA35SA11 had a result of 6.4

parts per million (ppm) of arsenic. The OPT instructed the DET not to excavate under Building 2079.

1.2.1.2 SA 35 Area B

The execution of this IRA consisted of the removal of asphalt and the excavation of an area approximately 10′ x 35′ to a depth of 2′ at old monitoring well OLD-35-2 (Figure 3). Soil removed from the site was characterized as non-hazardous and sent to a treatment facility for incineration. Confirmation samples were collected from the sidewalls upon completion of the excavation and tested for TRPH and arsenic. The results of these samples were all less than the RGOs.

1.2.1.3 SA 35 Area C

The execution of this IRA consisted of the extraction of a hydraulic lift, removal of asphalt, and the excavation of an area approximately 20′ x 31′ to a depth of 9′ located north of Building 2078 (Figure 3). Soil removed from the site was characterized as non-hazardous and was sent to a treatment facility for incineration. Confirmation samples were collected from the sidewalls at a depth of 2′ and 8′upon completion of the excavation and tested for TRPH. The results of these samples were all less than the RGOs.

1.2.1.4 SA 35 Area D

The execution of this IRA consisted of the extraction of a hydraulic lift, removal of concrete, and the excavation of an area approximately 23′ x 30′ to a depth of 9′ located on the east side of the interior of Building 2078 (Figure 4). Soil removed from the site was characterized as non-hazardous and was sent to a treatment facility for incineration. Confirmation samples were collected from the sidewalls at a depth of 2′ and 8′upon completion of the excavation and tested for TRPH. The results of these samples were all less than the RGOs.

1.2.1.5 SA 35 Area E

The execution of this IRA consisted of the extraction of three hydraulic lifts, removal of concrete, and the excavation of an area approximately 30′ x 48′ to a depth of 9′ located on the west side of the interior of Building 2078 (Figure 4). Soil removed from the site was characterized as non-hazardous and was sent to a treatment facility for incineration. Confirmation samples were collected from the sidewalls at a depth of 2′ and 8′upon completion of the excavation and tested for TRPH and arsenic. The results of these samples were all less than the RGOs.

1.2.1.6 SA 35 Area F

Cancelled see section 2.3.

1.2.1.7 SA 35 Area G

The execution of this IRA consisted of the removal of asphalt and excavating an area approximately 5′ x 5′ to a depth of 2′ at monitoring well OLD-35-01 (Figure 5). Soil removed from the site was characterized as non-hazardous and was sent to a treatment facility for incineration. Confirmation samples were collected from the sidewalls upon completion of the excavation and tested for arsenic. The results of these samples were all less than the RGOs.

1.2.1.8 SA 35 Area H

The execution of this IRA consisted of the removal of asphalt and excavating an area approximately 10′ x 15′ to a depth of 2′ at sample point 35S007 (Figure 5). Soil removed from the site was characterized as non-hazardous and was sent to a treatment facility for incineration. Confirmation samples were collected from the sidewalls upon completion of the excavation and tested for arsenic. The results of these samples were all less than the RGOs.

1.2.1.9 SA 35 Area I

The execution of this IRA consisted of the removal of asphalt and excavating an area approximately 10′ x 15′ to a depth of 2′ at sample point 35S008 (figure 5). Soil removed from the site was characterized as non-hazardous and was sent to a treatment facility for incineration. Confirmation samples were collected from the sidewalls upon completion of the excavation and tested for arsenic. The results of these samples were all less than the RGOs.

2.0 INTERIM REMEDIAL ACTION EXCECUTION

2.1 ACTIONS PERFORMED BY THE INTERIM REMEDIAL ACTION WORK PLAN

Actions performed are listed below

- Collection of waste characterization samples
- Removal and disposal of asphalt and concrete
- Extraction and removal of hydraulic lifts
- Excavation and disposal of approximately 1,159 tons of soil
- Collection of confirmatory samples along each sidewall for analysis of TRPH and/or arsenic
- Restoration of sites by backfilling, grading to surrounding area, and seeding

2.2 OBSERVATIONS NOTES

2.2.1 Soil Conditions

From ground surface to the bottom of the excavation the soil was dark silty sand.

2.3 PLAN MODIFICATIONS AND JUSTIFICATION

- Informed the OPT that sample SA35SA11 located along the north side of Building 2079 had a result of 6.4 parts per million of arsenic. The OPT instructed the DET not to excavate under Building 2079.

- The OPT instructed the DET not to excavate SA 35 area "F" on April 27, 1999.

3.0 INTERIM REMEDIAL ACTION OUTCOME

3.1 SITE CONDITIONS FOLLOWING COMPLETION OF WORK

Following completion of work, the DET had removed 1,159 tons of TRPH and/or arsenic contaminated soil. The site was backfilled, graded to surrounding area and seeded. Site photographs are included in Appendix D1.

4.0 SAMPLING

4.1 CONFIRMATION SAMPLING Confirmation sampling was performed as follows.

4.1.1 SA 35 Area A

Upon completion of work a confirmation sample was collected on each sidewall and tested for TRPH and arsenic (Figure 6). See appendix D2 for sampling documentation.

4.1.2 SA 35 Area B

Upon completion of work a confirmation sample was collected on each sidewall and tested for TRPH and arsenic (Figure 7). See appendix D2 for sampling documentation.

4.1.3 SA 35 Area C

Upon completion of work confirmation samples were collected from each sidewall at a depth of 2′ and 8′ and tested for TRPH (Figure 8). See appendix D2 for sampling documentation.

4.1.4 SA 35 Area D

Upon completion of work confirmation samples were collected from each sidewall at a depth of 2′ and 8′ and tested for TRPH (Figure 9). See appendix D2 for sampling documentation.

4.1.5 SA 35 Area E

Upon completion of work confirmation samples were collected from each sidewall at a depth of 2′ and 8′ and tested for TRPH and arsenic (Figure 10). See appendix D2 for sampling documentation.

4.1.6 SA 35 Area F

Cancelled see section 2.3.

4.1.7 SA 35 Area G

Upon completion of work a confirmation sample was taken on each sidewall and tested for and arsenic (Figure 11). See appendix D2 for sampling documentation.

4.1.8 SA 35 Area H Upon completion of work a confirmation sample was taken on each sidewall and tested for and arsenic (Figure 12). See appendix D2 for sampling documentation.

4.1.9 SA 35 Area I Upon completion of work a confirmation sample was taken on each sidewall and tested for and arsenic (Figure 13). See appendix D2 for sampling documentation.

4.2 WASTE CHARACTERIZATION SAMPLING Three waste characterization (samples SA35009, SA35013, & SA35015) samples were taken and analyzed for TCLP metals and one waste characterization (sample SPROT0153-1) was taken and analyzed for TCLP lead. See appendix D2 for sampling documentation.

5.0 WASTE GENERATION

5.1 Non-Hazardous Waste

A total of 1,159 tons of non-hazardous TRPH and/or arsenic soil was disposed of to a permitted treatment, storage and disposal facility. Waste Manifests are in appendix D3.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed
in accordance with General Engineering Laboratories
standard operating procedures. Please direct
any questions to your Project Manager, Elise Hanson at 843-556-8171.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

STUDY AREA 37

1. INTRODUCTION

1.1 STUDY AREA 37

SA 37 is located on the Main Base, Naval Training Center, Orlando (Figure 1). Building 2414 is a storage facility associated with the Bachelor Officers' Quarters. Several pesticides were detected in the surface soil sample north of Building 2414 (figure 2).

1.2 SA 37 INTERIM REMEDIAL ACTION

SOUTHDIV tasked the DET to perform an IRA for this site. The objective of the IRA was to excavate and dispose of soil contaminated with pesticides. The excavation was to continue until the sampling program indicated with reasonable confidence that the concentrations of contaminants at the site were less than residential limits specified by FDEP SCG, dated 30 April 1998 or USEPA Region III, dated 01 October 1998, whichever specifies the stricter criteria.

1.2.1 SA 37 Interim Remedial Action Execution Summary

The execution of this IRA consisted of excavating an area approximately 20′ x 25′ to a depth of 2′ (Figure 3). Soil removed from the site was characterized as hazardous and was sent to a permitted Treatment, Storage, and Disposal Facility (TSDF). A Confirmation sample was collected from each sidewall and excavation bottom, testing for pesticides. The results of these samples were all less than the RGOs.

2.0 INTERIM REMEDIAL ACTION EXCECUTION

2.1 ACTIONS PERFORMED BY THE INTERIM REMEDIAL ACTION WORK PLAN

Actions performed are listed below

- Excavation and disposal of an area approximately 20′ x 25′ to a depth of 2′
- Collection of confirmatory samples from each sidewall and excavation bottom for analysis of pesticides
- Restoration of site by backfilling, grading to surrounding area, and seeding

2.2 OBSERVATIONS NOTES

2.2.1 Soil Conditions

From ground surface to the bottom of the excavation the soil was dark silty sand.

3.0 INTERIM REMEDIAL ACTION OUTCOME

3.1 SITE CONDITIONS FOLLOWING COMPLETION OF WORK

Following completion of work, the DET had removed 44 tons of pesticide contaminated soil. The site was backfilled, graded to surrounding area and seeded. Site photographs are included in Appendix E1.

4.0 SAMPLING

4.1 CONFIRMATION SAMPLING

Upon completion of work a confirmation sample was taken on each sidewall and excavation bottom, testing for pesticides (Figure 4). See appendix E2 for sampling documentation.

5.0 WASTE GENERATION

5.1 Hazardous Waste

A total of 44 tons of hazardous pesticide contaminated soil was disposed of to a permitted treatment, storage and disposal facility. Waste Manifests are in appendix E3.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed in accordance with General Engineering Laboratories standard operating procedures. Please direct any questions to your Project Manager, Elise Hanson at 843-556-8171.

STUDY AREA 40

1. INTRODUCTION

1.1 STUDY AREA 40

SA 40 is located on the Main Base, Naval Training Center, Orlando (Figure 1). It consists of a open field between Maguire Boulevard and Nautilus Street (Figure 2).

1.2 SA 40 INTERIM REMEDIAL ACTION

SOUTHDIV tasked the DET to perform an IRA for this site. The objective of the IRA was to excavate and dispose of soil contaminated with PAHs and arsenic. The excavation was to continue until the sampling program indicated with reasonable confidence that the concentrations of contaminants at the site were less than the residential limits specified by FDEP SCG, dated 30 April 1998 or USEPA Region III, dated 01 October 1998, whichever specifies the stricter criteria.

1.2.1 SA 40 Interim Remedial Action Execution Summary

The execution of this IRA consisted of excavating an irregular shaped area approximately 250′ x 300′ to a depth of 2′ (Figure 3) and a area 10′ x 10′ to a depth of 2′ at sample location 40S028 (Figure 4). Soil removed from the site was characterized as non-hazardous and was sent to a permitted Subtitle D landfill. Confirmation samples were collected from each sidewall upon completion of the large excavation and tested for PAHs and arsenic. The results of these samples were either less than the RGOs or were less than three times the RGOs. Upon completion of excavation of sample location 40S028, a confirmation sample was taken from each sidewall and tested for arsenic. The results of these samples were all less than the RGOs.

2.0 INTERIM REMEDIAL ACTION EXCECUTION

2.1 ACTIONS PERFORMED BY THE INTERIM REMEDIAL ACTION WORK PLAN

Actions performed are listed below

- Collection of a waste characterization samples
- Removal of fencing
- Installation of 800 feet of silt fencing
- Excavation and disposal of approximately 7,916 tons of soil
- Collection of confirmatory samples from each sidewall for analysis of PAHs and/or arsenic
- Restoration of site by backfilling, grading to surrounding area, and hydroseeding

2.2 OBSERVATIONS NOTES

2.2.1 Soil Conditions

From ground surface to the bottom of the excavation the soil was white sugar sand.

2.3 PLAN MODIFICATIONS AND JUSTIFICATION

- Original scope of work intended the soils from SA 40 to be reused at Operable Unit (OU) 2 at the McCoy Annex. Upon the start of excavation the DET unearthed some debris. The DET trenched approximately 40 openings on a 50' grid throughout excavation area to allow for visual inspections. The OPT was informed and conducted a site visit. The OPT informed the DET that the soils from SA 40 were not suitable for reuse at OU2 and that the soils should be disposed of. All soils from SA 40 were disposed of to a permitted Subtitle D landfill.

- The OPT instructed the DET to excavate areas with any visual debris remaining on any sidewall and to provide a drawing of the debris area. The excavated debris area is shown in Figure 5.

3.0 INTERIM REMEDIAL ACTION OUTCOME

3.1 SITE CONDITIONS FOLLOWING COMPLETION OF WORK

Following completion of work, the DET had removed 7,916 tons of PAH/arsenic contaminated soil. The site was backfilled, graded to surrounding area and hydroseeded. Site photographs are included in Appendix F1.

4.0 SAMPLING

4.1 CONFIRMATION SAMPLING

Upon completion of work in the large area, confirmation samples were taken on each sidewall and tested for PAHs and arsenic (Figure 3). Upon completion of work at sample location 40S028, a confirmation sample was taken on each sidewall and tested for arsenic (Figure 4). See appendix F2 for sampling documentation.

4.2 WASTE CHARACTERIZATION SAMPLING

Waste characterization samples (samples SA40S025 thru 31 were taken and analyzed for TCLP metals and samples SA40S36 thru 49 were taken and analyzed for VOC 8021). Hydraulic oil removed from lift pits was analyzed for PCBs. See appendix F2 for sampling documentation.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

STUDY AREA 42

1. INTRODUCTION

1.1 STUDY AREA 42

SA 42 is located south of Iwo Jima Street and west Leahy Avenue on the Main Base, Naval Training Center, Orlando (Figure 1). The SA includes several buildings their associated grounds. PAH's were detected in north of Building 2056 and east of Building 2055 (figure 2).

1.2 SA 42 INTERIM REMEDIAL ACTION

SOUTHDIV tasked the DET to perform an IRA for this site. The objective of the IRA was to excavate and dispose of soil contaminated with PAHs. The excavation was to continue until the sampling program indicated with reasonable confidence that the concentrations of contaminants at the site were less than residential limits specified by FDEP SCG, dated 30 April 1998 or USEPA Region III, dated 01 October 1998, whichever specifies the stricter criteria.

1.2.1 SA 42 Interim Remedial Action Execution Summary

The execution of this IRA consisted of excavating an area approximately 12′ x 10′ to a depth of 1′ at sample location 42S001 (Figure 3) and an area approximately 10′ x 10′ to a depth of 1′ at sample location 42S002 (Figure 4). Soil removed from the site was characterized as non-hazardous and was sent to a treatment facility for incineration. A Confirmation sample was collected from each sidewall upon completion of the excavation and tested for PAHs. The results of these samples were all less than the RGOs except for the sample 2′ north of Building 2056 (sample 99SPORT0161-7) as shown in Figure 3. The OPT was informed that sample 99SPORT0161-7 had a result of 0.456 parts per million of Benzo(a)pyrene. The OPT instructed the DET to excavate up to Building 2056 and to take an additional informational sample. The DET excavated an additional 2′ x 10′ to a depth of 1′and collected sample 99SPORT0191-1 as shown in Figure 3. The results of this sample were less than the RGOs.

2.0 INTERIM REMEDIAL ACTION EXCECUTION

2.1 ACTIONS PERFORMED BY THE INTERIM REMEDIAL ACTION WORK PLAN

Actions performed are listed below.

- Collection of waste characterization samples
- Excavation and disposal of an area approximately 10′ x 10′ x 1′ and an area 12′ x 10′ x 1′
- Collection of confirmatory samples from each sidewall for analysis of PAHs
- Restoration of site by backfilling, grading to surrounding area, and seeding

2.2 OBSERVATIONS NOTES

2.2.1 Soil Conditions

From ground surface to the bottom of the excavation the soil was dark silty sand.

2.3 PLAN MODIFICATIONS AND JUSTIFICATION

Informed the OPT that sample SA35SA11 located along the north side of Building 2079 had a result of 6.4 parts per million of arsenic. The OPT instructed the DET not to excavate under Building 2079. Informed the OPT that sample 99SPORT0161-7 had a result of 0.456 parts per million of Benzo(a)pyrene. The OPT instructed the DET to excavate up to Building 2056 and to take an additional informational sample. The DET excavated an additional 2′ x 10′ to a depth of 1′. Sample 99SPORT0191-1 is provided as the informational sample (Appendix G2).

3.0 INTERIM REMEDIAL ACTION OUTCOME

3.1 SITE CONDITIONS FOLLOWING COMPLETION OF WORK

Following completion of work, the DET had removed 11 tons of PAH contaminated soil. The site was backfilled, graded to surrounding area and seeded. Site photographs are included in Appendix G1.

4.0 SAMPLING

4.1 CONFIRMATION SAMPLING

Upon completion of work a confirmation sample was taken on each sidewall and tested for PAHs (Figures 3 & 4). See appendix G2 for sampling documentation.

4.2 WASTE CHARACTERIZATION SAMPLING

Waste characterization samples SA-42001 & SA-42002 were taken and analyzed for TCLP metals. See appendix G2 for sampling documentation.

5.0 WASTE GENERATION

5.1 Non-Hazardous Waste

A total of 11 tons of non-hazardous PAH contaminated soil was disposed of to a permitted treatment, storage and disposal facility. Waste Manifests are in appendix G3.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed in accordance with General Engineering Laboratories standard operating procedures. Please direct any questions to your Project Manager, Elise Hanson at 843-556-8171.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed in accordance with General Engineering Laboratories standard operating procedures. Please direct any questions to your Project Manager, Elise Hanson at 843-556-8171.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed in accordance with General Engineering Laboratories standard operating procedures. Please direct any questions to your Project Manager, Elise Hanson at 843-556-8171.

OPERABLE UNIT 3

1. INTRODUCTION

1.1 OPERABLE UNIT 3

Operable Unit (OU) 3 is located on the Main Base, Naval Training Center, Orlando (Figure 1). OU 3 consists of SA 8 and SA 9. SA 8 was the location of the greenskeeper's storage area, which consists of Building 2134, several smaller storage sheds, and numerous concrete pads (Figure 1). Information for SA 9 can be found in Section 6.

STUDY AREA 8

1.2 OU 3 SA 8 INTERIM REMEDIAL ACTION

SOUTHDIV tasked the DET to perform an IRA for this site. The objective of the IRA was to excavate and dispose of soil contaminated with pesticides and/or arsenic. The excavation was to continue until the sampling program indicated with reasonable confidence that the concentrations of contaminants at the site were less than residential limits specified by FDEP SCG, dated 30 April 1998 or USEPA Region III, dated 01 October 1998, whichever specifies the stricter criteria.

1.2.1 OU 3 SA 8 Interim Remedial Action Execution Summary

The execution of this IRA is discussed in the following sections:

1.2.1.1 OU3 SA 8 Sample Point 08S044

The execution of this IRA consisted of excavating an area approximately 5′ x 8′ to a depth of 2′ (Figure 2). Soil removed from the site was characterized as hazardous and was sent to a permitted Treatment, Storage, and Disposal Facility (TSDF). A Confirmation sample was collected from each sidewall testing for pesticides. The results of these samples were all less than the RGOs.

1.2.1.2 OU3 SA 8 Sample Point 08S031

The execution of this IRA consisted of excavating an area approximately 16′ x 31′ to a depth of 2′ (Figure 3). Soil removed from the site was characterized as hazardous and was sent to a permitted Treatment, Storage, and Disposal Facility (TSDF). A Confirmation sample was collected from each sidewall testing for pesticides. The results of these samples were all less than the RGOs.

1.2.1.3 OU3 SA 8 Arsenic Areas

The execution of this IRA consisted of excavating an area approximately 150′ x 290′ to a depth of 2′ (Figure 4). Soil removed from the site was characterized as non-hazardous and was sent to a Subtitle D landfill. Confirmation samples were collected from each sidewall testing for arsenic. The results of these samples were all less than the RGOs or were less than three times the RGOs.

2.0 INTERIM REMEDIAL ACTION EXCECUTION

2.1 ACTIONS PERFORMED BY THE INTERIM REMEDIAL ACTION WORK PLAN

Actions performed are listed below.

- Collection of waste characterization samples
- Installation of approximately 400′ of silt fencing for erosion control
- Removal and disposal of 50 square feet of non-friable transite shingles
- Demolition and disposal of Building 2143
- Removal and disposal of concrete, asphalt, trees/shrubs/ and fencing
- Excavation and disposal of approximately 2,886 tons of non-hazardous waste
- Excavation and disposal of approximately 63 tons of hazardous waste
- Collection of confirmatory samples along each sidewall for analysis of pesticides and/or arsenic
- Restoration of site by backfilling, grading to surrounding area, and hydroseeding

2.2 OBSERVATIONS NOTES

2.2.1 Soil Conditions

From ground surface to the bottom of the excavation the soil was dark silty sand.

2.3 PLAN MODIFICATIONS AND JUSTIFICATION

- The OPT added three 5′ x 5′ x 2′ areas, an 25′ x 40′ x 2′ area, and a 50′ x 50′ x 2′ area to the original scope of work to be conducted at the site for arsenic contamination.

3.0 INTERIM REMEDIAL ACTION OUTCOME

3.1 SITE CONDITIONS FOLLOWING COMPLETION OF WORK

Following completion of work, the DET had removed 63 tons of pesticide contaminated soil and 2,886 tons of arsenic contaminated soil. The site was backfilled, graded to surrounding area and hydroseeded. Site photographs are included in Appendix H1.

4.0 SAMPLING

4.1 CONFIRMATION SAMPLING

Upon completion of work a confirmation sample was taken on each sidewall testing for arsenic and/or pesticides (Figures 2, 3, & 4). See appendix H2 for sampling documentation.

4.2 WASTE CHARACTERIZATION SAMPLING

Waste characterization samples SA8001, 2, and 3 were taken and analyzed for TCLP metals and TCLP pesticides and sample 99SPORT0140-1 was taken and analyzed for TCLP metals.

5.0 WASTE GENERATION

5.1 Hazardous Waste

A total of 63 tons of hazardous pesticide contaminated soil was disposed of to a permitted treatment, storage and disposal facility. Waste Manifests are in appendix H3.

5.2 Non-Hazardous Waste

A total of 2,886 tons of non-hazardous arsenic contaminated soil was disposed of to a permitted treatment, storage and disposal facility. Waste Manifests are in appendix H3.

STUDY AREA 9

6.1 OPERABLE UNIT 3

Operable Unit (OU) 3 is located on the Main Base, Naval Training Center, Orlando (Figure 5). OU 3 consists of SA 8 and SA 9. SA 9 was the location of a pesticide and herbicide storage building used by the Air Force and Navy between the 1950's to 1972 (figure 1). Information for SA 8 can be found in Section 1.

6.2 OU 3 SA 9 INTERIM REMEDIAL ACTION

SOUTHDIV tasked the DET to perform an IRA for this site. The objective of the IRA was to excavate and dispose of soil contaminated with pesticides. The excavation was to continue until the sampling program indicated with reasonable confidence that the concentrations of contaminants at the site were less than residential limits specified by FDEP SCG, dated 30 April 1998 or USEPA Region III, dated 01 October 1998, whichever specifies the stricter criteria.

6.2.1 OU 3 SA 9 Interim Remedial Action Execution Summary

The execution of this IRA consisted of excavating an area approximately 128′ x 3′ to a depth of 2′ (Figure 6). Soil removed from the site was characterized as hazardous and was sent to a permitted Treatment, Storage, and Disposal Facility (TSDF). A Confirmation sample was collected from each sidewall testing for pesticides. The results of these samples were all less than the RGOs.

7.0 INTERIM REMEDIAL ACTION EXCECUTION

7.1 ACTIONS PERFORMED BY THE INTERIM REMEDIAL ACTION WORK PLAN

Actions performed are listed below

- Installation of approximately 75′ of silt fencing for erosion control
- Removal and disposal of trees and shrubs
- Excavation and disposal of an area approximately 128′ x 3′ to a depth of 2′
- Collection of confirmatory samples along each sidewall for analysis of pesticides and/or arsenic
- Restoration of site by backfilling, grading to surrounding area, and hydroseeding

7.2 OBSERVATIONS NOTES

7.2.1 Soil Conditions

From ground surface to the bottom of the excavation the soil was dark silty sand.

7.3 PLAN MODIFICATIONS AND JUSTIFICATION

- The OPT instructed the DET not to excavate sample point 09S009 for arsenic contamination.

8.0 INTERIM REMEDIAL ACTION OUTCOME

8.1 SITE CONDITIONS FOLLOWING COMPLETION OF WORK

Following completion of work, the DET had removed 32 tons of pesticide contaminated soil. The site was backfilled, graded to surrounding area and hydroseeded. Site photographs are included in Appendix H1.

9.0 SAMPLING

9.1 CONFIRMATION SAMPLING

Upon completion of work a confirmation sample was taken on each sidewall testing for arsenic and/or pesticides (Figure 6). See appendix H2 for sampling documentation.

10.0 WASTE GENERATION

10.1 Hazardous Waste

A total of 32 tons of hazardous pesticide contaminated soil was disposed of to a permitted treatment, storage and disposal facility. Waste Manifests are in appendix H3.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

Matrix	: Soil
Date Collected	: 05/09/99
Date Received	: 05/10/99
Priority	: Rush
Collector	: Client

Parameter	Qualifier	Result	DL	RL	Units	DF	Analyst	Date	Time	Batch	M
Metals Analysis											
Arsenic		507	450	495	ug/kg	2.0	MBL	05/11/99	1654	148766	1
The following prep procedures were performed:											
TRACE							AJM	05/10/99	1800	148766	2

M = Method	Method-Description
M 1	EPA 6010B
M 2	EPA 3050

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed in accordance with General Engineering Laboratories standard operating procedures. Please direct any questions to your Project Manager, Elise Hanson at 843-556-8171.

The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed
in accordance with General Engineering Laboratories
standard operating procedures. Please direct
any questions to your Project Manager, Elise Hanson at 843-556-8171.

Contact: Mr. Bill Hiers
Project Description: SUPSHIP-Portsmouth Detachment

cc: NPWC00197 Report Date: May 14, 1999

Sample ID	: 99SPORT0175-9
Lab ID	: 9905315-09
Matrix	: Soil
Date Collected	: 05/10/99
Date Received	: 05/11/99
Priority	: Rush
Collector	: Client

Parameter	Qualifier	Result	DL	RL	Units	DF	Analyst	Date	Time	Batch	M
Metals Analysis											
Arsenic	U	ND	438	481	ug/kg	2.0	MBL	05/12/99	1139	148886	
The following prep procedures were performed:											
TRACE							FGD	05/11/99	2000	148886	2

M = Method	Method-Description
M 1	EPA 6010B
M 2	EPA 3050

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed
in accordance with General Engineering Laboratories
standard operating procedures. Please direct
any questions to your Project Manager, Elise Hanson at 843-556-8171.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed
in accordance with General Engineering Laboratories
standard operating procedures. Please direct

Sample ID : 99 SPORT0140-1

M = Method	Method-Description

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed in accordance with General Engineering Laboratories standard operating procedures. Please direct any questions to your Project Manager, Elise Hanson at 843-556-8171.

OPERABLE UNIT 4

1. INTRODUCTION

1.1 OPERABLE UNIT 4

OU4 is located near Building 1100 off of Port Hueneme Avenue on the Main Base, Naval Training Center, Orlando (Figure 1). OU4 consists of various sample points in this area. Arsenic and PAH's were detected at these sample points (Figure 1).

1.2 OU 4 INTERIM REMEDIAL ACTION

SOUTHDIV tasked the DET to perform an IRA for this site. The objective of the IRA was to excavate and dispose of soil contaminated with arsenic or PAH's. The excavation was to continue until the sampling program indicated with reasonable confidence that the concentrations of contaminants at the site were less than non-residential limits specified by FDEP SCG, dated 30 April 1998 or USEPA Region III, dated 01 October 1998, whichever specifies the stricter criteria.

1.2.1 OU 4 Interim Remedial Action Execution Summary

The execution of this IRA consisted of excavating an area approximately 10′ x 10′ to a depth of 2′ at sample locations U4S006 and U4S015 and an area approximately 10′ x 10′ to a depth of 2′ at sample location U4S011 (Figure 1). Soil removed from the site was characterized as non-hazardous and was sent to a Subtitle D landfill. Confirmation samples were collected from each sidewall testing for arsenic from sample point U4S011 (Figure 2) and for PAHs from sample points U4S0015 (Figure 3) and U4S006 (Figure 4). The results of these samples were all less than the RGOs.

2.0 INTERIM REMEDIAL ACTION EXCECUTION

2.1 ACTIONS PERFORMED BY THE INTERIM REMEDIAL ACTION WORK PLAN

Actions performed are listed below.

- Excavation and disposal of three areas approximately 10′ x 10′ x 2
- Collection of confirmatory samples from each sidewall for analysis of arsenic or PAHs
- Restoration of site by backfilling, grading to surrounding area, and seeding

2.2 OBSERVATIONS NOTES

2.2.1 Soil Conditions

From ground surface to the bottom of the excavation the soil was dark silty sand.

3.0 INTERIM REMEDIAL ACTION OUTCOME

3.1 SITE CONDITIONS FOLLOWING COMPLETION OF WORK

Following completion of work, the DET had removed 32 tons of arsenic or PAH contaminated soil. The site was backfilled, graded to surrounding area and seeded. Site photographs are included in Appendix I1.

4.0 SAMPLING

4.1 CONFIRMATION SAMPLING

Upon completion of work a confirmation sample was collected from each sidewall testing for arsenic from sample point U4S011 (Figure 2) and testing for PAHs from sample points U4S015 (Figure 3) and U4S006 (Figure 4). See appendix I2 for sampling documentation

5.0 WASTE GENERATION

5.1 Non-Hazardous Waste

A total of 31 tons of non-hazardous PAH contaminated soil was disposed of to a permitted treatment, storage and disposal facility. Waste Manifests are in appendix I3.

TRACE							AJM	05/12/99	1730	148913	2

M = Method	Method-Description
M 1	EPA 6010B
M 2	EPA 3050

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed in accordance with General Engineering Laboratories standard operating procedures. Please direct any questions to your Project Manager, Elise Hanson at 843-556-8171.

Notes:
The qualifiers in this report are defined as follows:
ND indicates that the analyte was not detected at a concentration greater than the detection limit.
J indicates presence of analyte at a concentration less than the reporting limit (RL) and greater than the detection limit (DL).
U indicates that the analyte was not detected at a concentration greater than the detection limit.
* indicates that a quality control analyte recovery is outside of specified acceptance criteria.

This data report has been prepared and reviewed in accordance with General Engineering Laboratories standard operating procedures. Please direct any questions to your Project Manager, Elise Hanson at 843-556-8171.
