Groundwater Sample Results,<br>Level 2 Laboratory Report, Level 4 Laboratory Report, Electronic Data Deliverable, Data Validation Report, Sample Location Report, SDG 2000314<br>MCAS<br>Tustin, CA<br>April 2021

## February 29, 2020

## Vista Work Order No. 2000314

Ms. Kimberly Shiroodi
KMEA
2423 Hoover Avenue
National City, CA 91950
Dear Ms. Shiroodi,
Enclosed are the results for the sample set received at Vista Analytical Laboratory on February 13, 2020 under your Project Name 'MCAS El Toro and Tustin, PFAS'.

Vista Analytical Laboratory is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at mmaier@vista-analytical.com.

Thank you for choosing Vista as part of your analytical support team.

Sincerely,

Martha Maier<br>Laboratory Director

## Vista Work Order No. 2000314

Case Narrative

## Sample Condition on Receipt:

Thirteen groundwater samples and two blank water samples were received in good condition and within the method temperature requirements. The samples were received and stored securely in accordance with Vista standard operating procedures and EPA methodology.

## Analytical Notes:

## PFAS Isotope Dilution Method

The samples were extracted and analyzed for a selected list of PFAS using the PFAS Isotope Dilution Method (Modified EPA Method 537). The results for PFHxS, PFOA, PFOS, MeFOSAA, and EtFOSAA include both linear and branched isomers. Results for all other analytes include the linear isomers only.

## Holding Times

The samples were extracted and analyzed within the method hold times.

## Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above $1 / 2$ the LOQ concentrations. The OPR recoveries were within the method acceptance criteria.

As requested, an MS/MSD was performed on sample "I006MW03SR-20200212". The MS recovery of PFHxS was greater than $131 \%$. The MSD recoveries and/or RPDs were out of the acceptance criteria for PFHxA, PFHpA, and PFHxS.

The labeled standard recoveries outside the acceptance criteria are listed in the table below.

QC Anomalies

| LabNumber | SampleName | Analysis | Analyte | Flag |
| :--- | :--- | :--- | :--- | :---: |
| $2000314-11$ | IS72MW15S-20200212 | PFAS Isotope Dilution Method | 13C2-PFTeDA | H |

$\mathrm{H}=$ Recovery was outside laboratory acceptance criteria.

## DATA QUALIFIERS \& ABBREVIATIONS

| B | This compound was also detected in the method blank |
| :---: | :---: |
| Conc. | Concentration |
| CRS | Cleanup Recovery Standard |
| D | Dilution |
| DL | Detection limit |
| E | The associated compound concentration exceeded the calibration range of the instrument |
| H | Recovery and/or RPD was outside laboratory acceptance limits |
| I | Chemical Interference |
| IS | Internal Standard |
| J | The amount detected is below the Reporting Limit/LOQ |
| LOD | Limit of Detection |
| LOQ | Limit of Quantitation |
| M | Estimated Maximum Possible Concentration (CA Region 2 projects only) |
| NA | Not applicable |
| ND | Not Detected |
| OPR | Ongoing Precision and Recovery sample |
| P | The reported concentration may include contribution from chlorinated diphenyl ether(s). |
| Q | The ion transition ratio is outside of the acceptance criteria. |
| RL | Reporting Limit |
| TEQ | Toxic Equivalency |
| U | Not Detected (specific projects only) |
| * | See Cover Letter |

Unless otherwise noted, solid sample results are reported in dry weight. Tissue samples are reported in wet weight.

## February 29, 2020

## Vista Work Order No. 2000314

Ms. Kimberly Shiroodi
KMEA
2423 Hoover Avenue
National City, CA 91950
Dear Ms. Shiroodi,
Enclosed are the results for the sample set received at Vista Analytical Laboratory on February 13, 2020 under your Project Name 'MCAS El Toro and Tustin, PFAS'.

Vista Analytical Laboratory is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at mmaier@vista-analytical.com.

Thank you for choosing Vista as part of your analytical support team.

Sincerely,

Martha Maier<br>Laboratory Director

## Vista Work Order No. 2000314

Case Narrative

## Sample Condition on Receipt:

Thirteen groundwater samples and two blank water samples were received in good condition and within the method temperature requirements. The samples were received and stored securely in accordance with Vista standard operating procedures and EPA methodology.

## Analytical Notes:

## PFAS Isotope Dilution Method

The samples were extracted and analyzed for a selected list of PFAS using the PFAS Isotope Dilution Method (Modified EPA Method 537). The results for PFHxS, PFOA, PFOS, MeFOSAA, and EtFOSAA include both linear and branched isomers. Results for all other analytes include the linear isomers only.

## Holding Times

The samples were extracted and analyzed within the method hold times.

## Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above $1 / 2$ the LOQ concentrations. The OPR recoveries were within the method acceptance criteria.

As requested, an MS/MSD was performed on sample "I006MW03SR-20200212". The MS recovery of PFHxS was greater than $131 \%$. The MSD recoveries and/or RPDs were out of the acceptance criteria for PFHxA, PFHpA, and PFHxS.

The labeled standard recoveries outside the acceptance criteria are listed in the table below.

QC Anomalies

| LabNumber | SampleName | Analysis | Analyte | Flag |
| :--- | :--- | :--- | :--- | :---: |
| $2000314-11$ | IS72MW15S-20200212 | PFAS Isotope Dilution Method | 13C2-PFTeDA | H |

$\mathrm{H}=$ Recovery was outside laboratory acceptance criteria.

## DATA QUALIFIERS \& ABBREVIATIONS

| B | This compound was also detected in the method blank |
| :---: | :---: |
| Conc. | Concentration |
| CRS | Cleanup Recovery Standard |
| D | Dilution |
| DL | Detection limit |
| E | The associated compound concentration exceeded the calibration range of the instrument |
| H | Recovery and/or RPD was outside laboratory acceptance limits |
| I | Chemical Interference |
| IS | Internal Standard |
| J | The amount detected is below the Reporting Limit/LOQ |
| LOD | Limit of Detection |
| LOQ | Limit of Quantitation |
| M | Estimated Maximum Possible Concentration (CA Region 2 projects only) |
| NA | Not applicable |
| ND | Not Detected |
| OPR | Ongoing Precision and Recovery sample |
| P | The reported concentration may include contribution from chlorinated diphenyl ether(s). |
| Q | The ion transition ratio is outside of the acceptance criteria. |
| RL | Reporting Limit |
| TEQ | Toxic Equivalency |
| U | Not Detected (specific projects only) |
| * | See Cover Letter |

Unless otherwise noted, solid sample results are reported in dry weight. Tissue samples are reported in wet weight.

Store at room temperature away from light and moisture.
See storage and expiration date.

\section*{Certification}

Cambridge Isotope Laboratories, Inc. guarantees that this material meets or exceeds the specifications stated. Absolute identity as well as chemical and isotopic purities are assured by the use of unambiguous synthetic routes and multiple chemical analyses whenever possible. Results are representative of QC testing at time of release from Quality Control unless otherwise stated. CIL Certificates of Analysis are occasionally updated with new data following recertification. We recommend checking the website for the latest version.

Volumetric measurements were made with Class A glassware. Gravimetry is traceable to the NIST through calibrated balances and certified, calibrated, standard weights. The calibrations are traceable to the NIST under Test No. 822/270236-04. The calibrations also meet specifications outlined in ISO 9001, ISO/IEC 17025, ANSI/NSCL Z540-1-1994, NCR Document 10CFR50 Appendix B, and applicable subdocuments.

This COA references the bulk catalog number before packaging. The COA also applies to the CIL finished good catalog number. Some possible packaging sizes and their corresponding suffix are \(-1.2,-1,-0.5,-10\), or -0.1 .

\section*{INTENDED USE:}

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UVIMSIMS, x-ray crystallography, and meiting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS andior LC/MSIMS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\[
x_{i}, x_{2}, \ldots x_{n} \text { on which it depends is: } \quad u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where \(x\) is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

\section*{DOCUMENTATION/DATA ATTACHED:}

Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS/MS Data (Selected MRM Transitions)

\section*{ADDITIONAL INFORMATION:}
- See page 2 for further details.
- The native \(4: 2 \mathrm{FTS}\) contains \(4.22 \%\) of \({ }^{34} \mathrm{~S}\) (due to natural isotopic abundance) therefore both native 4:2FTS and M2-4:2FTS will produce signals in the \(\mathrm{m} / \mathrm{z} 329\) to \(\mathrm{m} / \mathrm{z} 309\) channel during SRM analysis. We recommend using the \(\mathrm{m} / \mathrm{z} 329\) to \(\mathrm{m} / \mathrm{z} 81\) transition to monitor for M2-4:2FTS during quantitative analysis as it will be free of any native contribution (see Figure 2).

\section*{DOCUMENTATION/ DATA ATTACHED:}

Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS/MS Data (Selected MRM Transitions)

\section*{ADDITIONAL INFORMATION:}
- See page 2 for further details.
- The native \(6: 2\) FTS contains \(4.22 \%\) of \({ }^{34} S\) (due to natural isotopic abundance) therefore both native 6:2FTS and M2-6:2FTS will produce signals in the \(\mathrm{m} / \mathrm{z} 429\) to \(\mathrm{m} / \mathrm{z} 409\) channel during SRM analysis. We recommend using the \(\mathrm{m} / \mathrm{z} 429\) to \(\mathrm{m} / \mathrm{z} 81\) transition to monitor for M2-6:2FTS during quantitative analysis as it will be free of any native contribution (see Figure 2).

\section*{INTENDED USE：}

The products prepared by Wellington Laboratories Inc．are for laboratory use only．This certified reference material（CRM）was designed to be used as a standard for the identification and／or quantification of the specific chemical compound it contains．

\section*{HANDLING：}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals．Due care should be exercised to prevent unnecessary human contact or ingestion．All procedures should be carried out in a well－functioning fume hood and suitable gloves，eye protection，and clothing should be worn at all times．Waste should be disposed of according to national and regional regulations．Safety Data Sheets（SDSs）are available upon request．

\section*{SYNTHESIS／CHARACTERIZATION：}

Our products are synthesized using single－product unambiguous routes whenever possible．They are then characterized，and their structures and purities confirmed，using a combination of the most relevant techniques，such as NMR，GC／MS，LC／MS／MS， SFC／UVIMS／MS，x－ray crystallography，and melting point．Isotopic purities of mass－labelled compounds are also confirmed using HRGC／HRMS and／or LC／MS／MS．

\section*{HOMOGENEITY：}

Prior to solution preparation，crystalline material is tested for homogeneity using a variety of techniques（as stated above）and its solubility in a given diluent is taken into consideration．Duplicate solutions of a new product are prepared from the same crystalline lot and，after the addition of an appropriate internal standard，they are compared by GC／MS，LC／MS／MS，and／or SFC／UV／MS／MS． The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD．New solution lots of existing products are compared to older lots in the same manner，which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers．In order to maintain the integrity of the assigned values），and associated uncertainty，the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment．

\section*{UNCERTAINTY：}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation：

The combined relative standard uncertainty，\(u_{c}(y)\) ，of a value \(y\) and the uncertainty of the independent parameters
\(x_{4}, x_{2^{*}} \ldots x_{n}\) on which it depends is：
\[
u_{t}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter．
The individual uncertainties taken into account include those associated with weights（calibration of the balance）and volumes （calibration of the volumetric glassware）．An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\)（calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ）is stated on the Certificate of Analysis for all of our products．

\section*{TRACEABILITY：}

All reference standard solutions are traceable to specific crystalline lots．The microbalances used for solution preparation are regularly calibrated by an external ISO／IEC 17025 accredited laboratory．In addition，their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO／IEC 17025 accredited laboratory．All volumetric glassware used is calibrated，of Class A tolerance，and traceable to an ISO／IEC 17025 accredited laboratory．For certain products，traceability to international interlaboratory studies has also been established．

\section*{EXPIRY DATE／PERIOD OF VALIDITY：}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration，until the specified expiry date，in the unopened ampoule．Monitoring for any degradation or change in concentration of the listed analyte（s）is performed on a routine basis．

\section*{LIMITED WARRANTY：}

At the time of shipment，all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications．

\section*{QUALITY MANAGEMENT}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAl Global， ISO／IEC 17025 by the Canadian Association for Laboratory Accreditation Inc．（CALA；A 1226），and ISO 17034 by ANSI－ASQ National Accreditation Board（ANAB；AR－1523）．

\section*{INTENDED USE:}

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HAZARDS:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Where possible, all of our products are synthesized using single-product unambiguous routes. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, \(x\)-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\(x_{1}, x_{2}, \ldots x_{n}\) on which it depends is:
\[
u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly tested by an external ISO/IEC 17025 accredited calibration company, In addition, their calibration is verified prior to each weighing using calibrated NIST and/or NRC traceable external weights. All volumetric glassware used is calibrated, of Class A tolerance, and has been tested according to the appropriate ASTM procedures, which are ultimately traceable to NIST. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO GUIDE 34 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

\section*{INTENDED USE:}

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be < \(5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{e}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\(x_{1}, x_{z}, \ldots x_{n}\) on which it depends is:
\[
u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where \(x\) is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/EC 17025 accredited laboratory. All volumetnc glassware used is calibrated, of Class A tolerance, and traceable to an ISOIEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAl Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoning for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

\section*{INTENDED USE:}

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, \(x\)-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{s}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\[
x_{1}, x_{2}, \ldots x_{n} \text { on which it depends is: } \quad u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where \(x\) is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/EC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISOIEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

The relative response factors of the analyte of interest in each solution are required to be <5\% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\[
x_{1}, x_{2}, \ldots x_{n} \text { on which it depends is: } \quad u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where \(x\) is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISOIEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISOIEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISOIEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

\section*{INTENDED USE:}

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x -ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{e}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\[
x_{1}, x_{2}, \ldots x_{n} \text { on which it depends is: } \quad u_{i}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric giassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISOIEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

\end{tabular}

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are avallable upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystaline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{e}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\(x_{1}, x_{2}, \ldots x_{n}\) on which it depends is:
\[
u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/EC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISOIEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISOREC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

\section*{INTENDED USE：}

The products prepared by Wellington Laboratories Inc．are for laboratory use only．This certified reference material（CRM）was designed to be used as a standard for the identification and／or quantification of the specific chemical compound it contains．

HANDLING：
This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals．Due care should be exercised to prevent unnecessary human contact or ingestion．All procedures should be carried out in a well－functioning fume hood and suitable gloves，eye protection，and clothing should be worn at all times．Waste should be disposed of according to national and regional regulations．Safety Data Sheets（SDSs）are available upon request．

\section*{SYNTHESIS／CHARACTERIZATION：}

Our products are synthesized using single－product unambiguous routes whenever possible．They are then characterized，and their structures and purities confirmed，using a combination of the most relevant techniques，such as NMR，GC／MS，LC／MS／MS， SFC／UV／MS／MS，x－ray crystallography，and melting point．Isotopic purities of mass－labelled compounds are also confirmed using HRGC／HRMS and／or LC／MS／MS．

\section*{HOMOGENEITY：}

Prior to solution preparation，crystalline material is tested for homogeneity using a variety of techniques（as stated above）and its solubility in a given diluent is taken into consideration．Duplicate solutions of a new product are prepared from the same crystalline lot and，after the addition of an appropriate internal standard，they are compared by GC／MS，LC／MS／MS，and／or SFC／UV／MS／MS． The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD．New solution lots of existing products are compared to older lots in the same manner，which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers．In order to maintain the integrity of the assigned value（s），and associated uncertainty，the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment．

\section*{UNCERTAINTY：}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation：

The combined relative standard uncertainty，\(u_{c}(y)\) ，of a value \(y\) and the uncertainty of the independent parameters
\[
x_{1}, x_{2}, \ldots x_{n} \text { on which it depends is: } \quad u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where \(x\) is expressed as a relative standard uncertainty of the individual parameter．
The individual uncertaintes taken into account include those associated with weights（calibration of the balance）and volumes （calibration of the volumetric glassware）．An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\)（calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ）is stated on the Certificate of Analysis for all of our products．

\section*{TRACEABILITY：}

All reference standard solutions are traceable to specific crystalline lots．The microbalances used for solution preparation are regularly calibrated by an external ISOIEC 17025 accredited laboratory．In addition，their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO／IEC 17025 accredited laboratory．All volumetric glassware used is calibrated，of Class A tolerance，and traceable to an ISO／IEC 17025 accredited laboratory．For certain products，traceability to international interlaboratory studies has also been established．

\section*{EXPIRY DATE／PERIOD OF VALIDITY：}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration，until the specified expiry date，in the unopened ampoule．Monitoring for any degradation or change in concentration of the listed analyte（s）is performed on a routine basis．

\section*{LIMITED WARRANTY：}

At the time of shipment，all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications．

\section*{QUALITY MANAGEMENT：}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global， ISO／ECC 17025 by the Canadian Association for Laboratory Accreditation Inc．（CALA；A 1226），and ISO 17034 by ANSI－ASQ National Accreditation Board（ANAB；AR－1523）．

\section*{ADDITIONAL INFORMATION:}
- See page 2 for further details.
- Contains 4 mole eq. of NaOH to prevent conversion of the carboxylic acid to the methyl ester.

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Certified By:

Date: \(\qquad\)
(mmidayyy)

\section*{INTENDED USE:}

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyse of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned values), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{0}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\[
x_{i}, x_{2}, \ldots x_{n} \text { on which it depends is: } \quad u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISOIEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE /PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAl Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\[
x_{r}, x_{2}, \ldots x_{n} \text { on which it depends is: } \quad u_{i}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an extemal ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISOIEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

\section*{INTENDED USE:}

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystaliography, and melting point. Isotopic punties of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\(x_{1}, x_{2}, \ldots x_{n}\) on which it depends is:
\[
u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an extemal ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAl Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

Desolvation Gas Flow \((\mathrm{l} / \mathrm{hr})=1000\)

Flow: \(\quad 300 \mu / / m i n\)

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care shouid be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MSMS, SFCIUV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UN/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\(x_{1}, x_{2}, \ldots x_{n}\) on which it depends is:
\[
u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where \(x\) is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISOIEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISOIEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Origoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

Al the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of iSO 9001 by SAl Global, ISOIEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

3 min before returning to initial conditions in 0.75 min .
Time: 12 min
Flow: \(\quad 300 \mu / / m i n\)

Source: Electrospray (negative)
Capillary Voltage (kV) \(=2.50\)
Cone Voltage \((\mathrm{V})=10.00\)
Desolvation Temperature \(\left({ }^{\circ} \mathrm{C}\right)=500\)
Desolvation Gas Flow (l/hr) \(=1000\)

\section*{INTENDED USE:}

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HANDLING:}

This product should oniy be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \% \mathrm{RSD}\). New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\(x_{1}, x_{2}, \ldots x_{n}\) on which it depends is:
\[
u_{\varepsilon}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISOIEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISOIEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISOIEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE/PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISOIEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and 15017034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

**For additional information or assistance concerning this or any other products from Wellington Laboratories Inc., please visit our website at wwwoll-labs.com or contact us directly at infocowell-labs.com**

\section*{INTENDED USE:}

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compounds it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFCIUV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\(x_{i}, x_{2}, \ldots x_{n}\) on which it depends is: \(\quad u_{v}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}\)
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

\title{
br-PFHxSK \\ Potassium Perfluorohexanesulfonate Solution/Mixture of Linear and Branched Isomers
}

\section*{PRODUCT CODE:}

LOT NUMBER:
CONCENTRATION:

SOLVENT(S):
DATE PREPARED: (nnadury)
LAST TESTED: (mmudim)
EXPIRY DATE: (nmddumm)
RECOMMENDED STORAGE:
br-PFHxSK
brPFHxSK1018
\(50.0 \pm 2.5 \mu \mathrm{~g} / \mathrm{ml}\) (total potassium salt)
\(45.5 \pm 2.3 \mu \mathrm{~g} / \mathrm{ml}\) (total PFHxS anion)
Methanol
10/01/2018
10/02/2018
10/02/2023
Store ampoule in a cool, dark place

\section*{DESCRIPTION:}

The chemical purity has been determined to be \(\geq 98 \%\) perfluorohexanesulfonate linear and branched isomers. The full name, structure and percent composition for each of the identified isomeric components are given in Table A.

\section*{DOCUMENTATION/ DATA ATTACHED:}

Table A: Isomeric Components and Percent Composition by \({ }^{19}\) F-NMR
Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS Data (SIR)
Figure 3: LC/MS/MS Data (Selected MRM Transitions)

\section*{ADDITIONAL INFORMATION:}
- See page 2 for further details.
- Contains \(\sim 0.3 \%\) of perfluoro-n-hexanoic acid and \(\sim 0.15 \%\) of perfluoro- 1 -pentanesulfonate.
- CAS\#: 3871-99-6 (for linear isomer; potassium salt).

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Certified By:

Date: 06/17/2019 (mmddyyy)

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compounds it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic punties of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\(x_{1}, x_{2}, \ldots x_{n}\) on which it depends is:
\[
u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integnity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\[
x_{1}, x_{2}, \ldots x_{n} \text { on which it depends is: } \quad u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAl Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

\section*{INTENDED USE:}

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techriques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be <5\% RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or irjection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\[
x_{1}, x_{2}, \ldots x_{n} \text { on which it depends is: } \quad u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{IRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISOIEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compounds it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste shoutd be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS /CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS; SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value( s ), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\[
x_{1}, x_{2}, \ldots x_{n} \text { on which it depends is: } \quad u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an extemal ISOIEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in matenal and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of 1509001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

Certified By:

Date: 08/29/2019 (mndddywn)

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compounds it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystaline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products, as well as mixtures and calibration solutions, are compared to older lots in a similar manner. This further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\[
x_{i}, x_{2}, \ldots x_{n} \text { on which it depends is: } \quad u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly callbrated by an external ISOIEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISOIEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

Refrigerate ampoule

\section*{DESCRIPTION:}

The chemical purity has been determined to be \(\geq 98 \% \mathrm{~N}\)-ethylperfluorooctanesulfonamidoacetic acid (linear and branched isomers). The full name, structure and percent composition for each of the identified isomeric components are given in Table A.

\section*{DOCUMENTATION/ DATA ATTACHED:}

Table A: Isomeric Components and Percent Composition by \({ }^{19} \mathrm{~F}\)-NMR
Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS Data (SIR)
Figure 3: LC/MS/MS Data (Selected MRM Transitions)

\section*{ADDITIONAL INFORMATION:}
- See page 2 for further details.
- Contains 4 mole eq. of NaOH to prevent conversion of the acetic acid moiety to its respective methyl ester.

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{a}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\[
x_{i}, x_{2}, \ldots x_{n} \text { on which it depends is: } \quad u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where \(x\) is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{IRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/EC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISOIEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

\section*{INTENDED USE:}

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS/CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UVIMS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. \section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISOIEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using callbrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISOIEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

\section*{INTENDED USE:}

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate intemal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{q}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\[
x_{i}, x_{2^{\prime}} \ldots x_{n} \text { on which it depends is: } \quad u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISOAEC 17025 accredited laboratory. For certain products, traceability to international interfaboratory studies has also been established.

EXPIRY DATE / PERIOD OF VALIDITY:
Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global ISOIIEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\[
x_{i}, x_{2}, \ldots x_{n} \text { on which it depends is: } \quad u_{i}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{t}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly tested by an external ISO/IEC 17025 accredited calibration company. In addition, their calibration is verified prior to each weighing using calibrated NIST and/or NRC traceable external weights. All volumetric glassware used is calibrated, of Class A tolerance, and has been tested according to the appropriate ASTM procedures, which are ultimately traceable to NIST. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISOIEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO GUIDE 34 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

\section*{INTENDED USE:}

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\(x_{1}, x_{2}, \ldots x_{n}\) on which it depends is:
\[
u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{t}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline iots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISOIEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

Start: 60\% (80:20 MeOH:ACN) / 40\% \(\mathrm{H}_{2} \mathrm{O}\)
(both with \(10 \mathrm{mM} \mathrm{NH}_{4} \mathrm{OAc}\) buffer)
Ramp to \(90 \%\) organic over 7 min and hold for 3 min before returning to initial conditions in 0.75 min . Time: 12 min

Flow:
\(300 \mu / / m i n\)

\section*{INTENDED USE:}

The products prepared by Wellington Laboratories Inc. are for laboratory use only. This certified reference material (CRM) was designed to be used as a standard for the identification and/or quantification of the specific chemical compound it contains.

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UVIMS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are also confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\(x_{1}, x_{2}, \ldots x_{n}\) on which it depends is:
\[
u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where \(x\) is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISOIEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/FEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

\section*{HANDLING:}

This product should only be used by qualified personnel familiar with its potential hazards and trained in the handling of hazardous chemicals. Due care should be exercised to prevent unnecessary human contact or ingestion. All procedures should be carried out in a well-functioning fume hood and suitable gloves, eye protection, and clothing should be worn at all times. Waste should be disposed of according to national and regional regulations. Safety Data Sheets (SDSs) are available upon request.

\section*{SYNTHESIS / CHARACTERIZATION:}

Our products are synthesized using single-product unambiguous routes whenever possible. They are then characterized, and their structures and purities confirmed, using a combination of the most relevant techniques, such as NMR, GC/MS, LC/MS/MS, SFC/UV/MS/MS, x-ray crystallography, and melting point. Isotopic purities of mass-labelled compounds are aiso confirmed using HRGC/HRMS and/or LC/MS/MS.

\section*{HOMOGENEITY:}

Prior to solution preparation, crystalline material is tested for homogeneity using a variety of techniques (as stated above) and its solubility in a given diluent is taken into consideration. Duplicate solutions of a new product are prepared from the same crystalline lot and, after the addition of an appropriate internal standard, they are compared by GC/MS, LC/MS/MS, and/or SFC/UV/MS/MS. The relative response factors of the analyte of interest in each solution are required to be \(<5 \%\) RSD. New solution lots of existing products are compared to older lots in the same manner, which further confirms the homogeneity of the crystalline material as well as the stability and homogeneity of the solutions in the storage containers. In order to maintain the integrity of the assigned value(s), and associated uncertainty, the dilution or injection of a subsample of this product should be performed using calibrated measuring equipment.

\section*{UNCERTAINTY:}

The maximum combined relative standard uncertainty of our reference standard solutions is calculated using the following equation:

The combined relative standard uncertainty, \(u_{c}(y)\), of a value \(y\) and the uncertainty of the independent parameters
\[
x_{i}, x_{2}, \ldots x_{n} \text { on which it depends is: } \quad u_{c}\left(y\left(x_{1}, x_{2}, \ldots x_{n}\right)\right)=\sqrt{\sum_{i=1}^{n} u\left(y, x_{i}\right)^{2}}
\]
where x is expressed as a relative standard uncertainty of the individual parameter.
The individual uncertainties taken into account include those associated with weights (calibration of the balance) and volumes (calibration of the volumetric glassware). An expanded maximum combined percent relative uncertainty of \(\pm 5 \%\) (calculated with a coverage factor of 2 and a level of confidence of \(95 \%\) ) is stated on the Certificate of Analysis for all of our products.

\section*{TRACEABILITY:}

All reference standard solutions are traceable to specific crystalline lots. The microbalances used for solution preparation are regularly calibrated by an external ISO/IEC 17025 accredited laboratory. In addition, their calibration is verified prior to each weighing using calibrated external weights traceable to an ISO/IEC 17025 accredited laboratory. All volumetric glassware used is calibrated, of Class A tolerance, and traceable to an ISO/IEC 17025 accredited laboratory. For certain products, traceability to international interlaboratory studies has also been established.

\section*{EXPIRY DATE / PERIOD OF VALIDITY:}

Ongoing stability studies of this product have demonstrated stability in its composition and concentration, until the specified expiry date, in the unopened ampoule. Monitoring for any degradation or change in concentration of the listed analyte(s) is performed on a routine basis.

\section*{LIMITED WARRANTY:}

At the time of shipment, all products are warranted to be free of defects in material and workmanship and to conform to the stated technical and purity specifications.

\section*{QUALITY MANAGEMENT:}

This product was produced using a Quality Management System registered to the latest versions of ISO 9001 by SAI Global, ISO/IEC 17025 by the Canadian Association for Laboratory Accreditation Inc. (CALA; A 1226), and ISO 17034 by ANSI-ASQ National Accreditation Board (ANAB; AR-1523).

**For additional information or assistance concerning this or any other products from Wellington Laboratories Inc., please visit our website at www.well-labs.com or contact us directly at info@well-labs.com**

\section*{PRODUCT CODE: COMPOUND:}

MPFHxS
Sodium perfluoro-1-hexane \(\left[{ }^{18} \mathrm{O}_{2}\right]\) sulfonate

LOT NUMBER: MPFHxS0119

\section*{STRUCTURE:}

\section*{DOCUMENTATION/ DATA ATTACHED:}

Figure 1: LC/MS Data (TIC and Mass Spectrum)
Figure 2: LC/MS/MS Data (Selected MRM Transitions)

\section*{ADDITIONAL INFORMATION:}
- See page 2 for further details.
- The response factor for MPFHxS \(\left(\mathrm{C}_{6} \mathrm{~F}_{13} \mathrm{~S}^{18} \mathrm{O}_{2}{ }^{18} \mathrm{O}\right)\) has been observed to be up to \(10 \%\) lower than for PFHxS \(\left(\mathrm{C}_{6} \mathrm{~F}_{13} \mathrm{~S}^{16} \mathrm{O}_{3}\right)\) when both compounds are injected together. This difference may vary between instruments.
- Contains \(\sim 0.6 \%\) of sodium perfluoro- 1 -octane \(\left[{ }^{[8} \mathrm{O}_{2}\right]\) sulfonate \(\left({ }^{18} \mathrm{O}_{2}\right.\)-PFOS \()\) and \(\sim 0.2 \%\) of sodium perfluoro-1-heptane \(\left[{ }^{18} \mathrm{O}_{2}\right.\) ]sulfonate ( \({ }^{88} \mathrm{O}_{2}-\mathrm{PFHpS}\) ).
- Due to the isotopic purity of the starting material ( \({ }^{18} \mathrm{O}_{2}>94 \%\) ), MPFHxS contains \(\sim 0.3 \%\) of PFHxS. This value agrees with the theoretical percent relative abundance that is expected based on the stated isotopic purity.

FOR LABORATORY USE ONLY: NOT FOR HUMAN OR DRUG USE

Wood Environment \& Infrastructure Solutions, Inc.
March 20, 2020
7376 SW Durham Road
Portland, OR 97224
Attn: Ms. Kimberly Shiroodi
Kimberly.Shiroodi@woodplc.com
SUBJECT: MCAS El Toro \& Tustin PFAs, Data Validation
Dear Ms. Shiroodi,
Enclosed are the final validation reports for the fraction listed below. These SDGs were received on March 11, 2020. Attachment 1 is a summary of the samples that were reviewed for analysis.

\section*{LDC Project \#47508:}

\section*{SDG \#}

2000314,2000321,2000330
2000356,2000372,2000390

\section*{Fraction}

Perfluoroalkyl \& Polyfluoroalkyl Substances

The data validation was performed under Stage 4 guidelines. The analyses were validated using the following documents, as applicable to each method:
- Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances in Groundwater in Carve -Outs 2, 5, 6 \& 9 and Groundwater and Surface Water Near Operable Unit 3, Former Marine Corps Air Station Tustin, Tustin, California, with Addendum \#02 to Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances Sampling for Groundwater Remedial Action at Operable Unit 3, Installation Restoration Program Site 1, February 2020
- U.S. Department of Defense Quality Systems Manual for Environmental Laboratories, Version 5.3, 2019
- DoD General Validation Guidelines, February 2018

Please feel free to contact us if you have any questions.
Sincerely,

\section*{Pei Geng}

Pgeng@lab-data.com
Project Manager/Senior Chemist

\section*{Introduction}

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances in Groundwater in Carve-Outs 2, 5, 6, and 9 and Groundwater and Surface Water Near Operable Unit 3, Former Marine Corps Air Station Tustin, Tustin, California, with Addendum \#02 to Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances Sampling for Groundwater Remedial Action at Operable Unit 3, Installation Restoration Program Site 1 (February 2020), the U.S. Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3 (2019), and the DoD General Validation Guidelines (February 2018). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:
Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) by Environmental Protection Agency (EPA) Method 537 Modified and LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

All sample results were subjected to Stage 4 data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:
J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to nonconformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

\section*{I. Sample Receipt and Technical Holding Times}

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

\section*{II. LC/MS Instrument Performance Check}

Instrument performance was checked and the requirements were met.

\section*{III. Initial Calibration and Initial Calibration Verification}

Initial calibration was performed as required by the methods.
The percent relative standard deviations (\%RSD) were less than or equal to \(20.0 \%\) for all compounds.

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination \(\left(r^{2}\right)\) were greater than or equal to 0.990 .

For each calibration standard, all compounds were within \(70-130 \%\) of their true value.
The signal to noise \((\mathrm{S} / \mathrm{N})\) ratio was within validation criteria for all compounds.
Retention time windows were established as required by the methods.
The percent differences (\%D) of the initial calibration verification (ICV) standard were less than or equal to \(30.0 \%\) for all compounds.

\section*{IV. Continuing Calibration and Instrument Sensitivity Check}

Continuing calibration was performed at required frequencies.
The percent differences (\%D) were less than or equal to \(30.0 \%\) for all compounds.
The signal to noise \((S / N)\) ratio was within validation criteria for all compounds.
The percent differences (\%D) of the instrument sensitivity check (ISC) were less than or equal to \(30.0 \%\) for all compounds.

Retention times of all compounds in the calibration standards were within the established retention time windows.

\section*{V. Laboratory Blanks}

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

\section*{VI. Field Blanks}

Sample EB01-20200212 was identified as an equipment blank. No contaminants were found.

Sample SB01-20200212 was identified as a source blank. No contaminants were found.

\section*{VII. Matrix Spike/Matrix Spike Duplicates}

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. For I006MW03SR-20200212MS/MSD, no data were qualified for perfluorohexane sulfonic acid (PFHxS) percent recoveries (\%R) and Perfluorohexanoic acid (PFHxA) and Perfluoroheptanoic acid (PFHpA) relative percent differences (RPD) outside the QC limits since the parent sample results were greater than 4 X the spike concentration. All other relative percent differences (RPD) were within QC limits.

\section*{VIII. Laboratory Control Samples}

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (\%R) were within QC limits.

\section*{IX. Field Duplicates}

Samples I006MW05SR-20200212 and DUP01-20200212, samples I005MW01SR20200212 and DUP05-20200212, and samples 222MW02S-20200212 and DUP0320200212 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:
\begin{tabular}{|c|c|c|c|c|c|c|}
\hline \multirow[b]{2}{*}{Compound} & \multicolumn{2}{|l|}{Concentration (ug/L)} & \multirow[b]{2}{*}{\[

\end{tabular}} & \begin{tabular}{c} 
RPD \\
Difference \\
(Limits)
\end{tabular} & Flag
\end{tabular} A or P \(\mid\)

\section*{X. Labeled Compounds}

All percent recoveries (\%R) for labeled compounds used to quantitate target compounds were within QC limits with the following exceptions:
\begin{tabular}{|c|c|c|c|c|c||}
\hline Sample & \begin{tabular}{c} 
Labeled \\
Compound
\end{tabular} & \%R (Limits) & \begin{tabular}{c} 
Affected \\
Compound
\end{tabular} & Flag & A or \(\mathbf{P}\) \\
\hline \hline IS72MW15S-20200212 & 13C2-PFTeDA & 34.4 (50-150) & Perfluorotetradecanoic acid (PFTeDA) & NA & - \\
\hline
\end{tabular}

\section*{XI. Compound Quantitation}

All compound quantitations met validation criteria.

\section*{XII. Target Compound Identifications}

All target compound identifications met validation criteria with the following exceptions:
\begin{tabular}{||l|l|c|c|c||}
\hline \multicolumn{1}{|c|}{\begin{tabular}{c|c|c|c||} 
Sample & & Compound & \begin{tabular}{c} 
lon Abundance Ratio \\
(Limits)
\end{tabular} \\
\hline BMW07S-20200212 & Perfluorodecanoic acid (PFDA) & \(50.940(4.8175-14.4525)\) & J (all detects)
\end{tabular} A} \\
\hline DUP03-20200212 & Perfluorooctanesulfonic acid (PFOS) & \(3.412(1.12-3.36)\) & J (all detects) & A \\
\hline A000MW42S-20200212 & Perfluorooctanesulfonic acid (PFOS) & \(9.108(1.12-3.36)\) & J (all detects) & A \\
\hline DUP05-20200212 & Perfluorodecanoic acid (PFDA) & \(14.922(4.8175-14.4525)\) & J (all detects) & A \\
\hline
\end{tabular}

\section*{XIII. System Performance}

The system performance was acceptable.

\section*{XIV. Overall Assessment of Data}

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to ion abundance ratio, data were qualified as estimated in four samples.
The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable.

\section*{Introduction}

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances in Groundwater in Carve-Outs 2, 5, 6, and 9 and Groundwater and Surface Water Near Operable Unit 3, Former Marine Corps Air Station Tustin, Tustin, California, with Addendum \#02 to Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances Sampling for Groundwater Remedial Action at Operable Unit 3, Installation Restoration Program Site 1 (February 2020), the U.S. Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3 (2019), and the DoD General Validation Guidelines (February 2018). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:
Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) by Environmental Protection Agency (EPA) Method 537 Modified and LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

All sample results were subjected to Stage 4 data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:
J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to nonconformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

\section*{I. Sample Receipt and Technical Holding Times}

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

\section*{II. LC/MS Instrument Performance Check}

Instrument performance was checked and the requirements were met.

\section*{III. Initial Calibration and Initial Calibration Verification}

Initial calibration was performed as required by the methods.
The percent relative standard deviations (\%RSD) were less than or equal to \(20.0 \%\) for all compounds.

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination ( \(\mathrm{r}^{2}\) ) were greater than or equal to 0.990 .

For each calibration standard, all compounds were within \(70-130 \%\) of their true value.
The signal to noise \((\mathrm{S} / \mathrm{N})\) ratio was within validation criteria for all compounds.
Retention time windows were established as required by the methods.
The percent differences (\%D) of the initial calibration verification (ICV) standard were less than or equal to \(30.0 \%\) for all compounds.

\section*{IV. Continuing Calibration and Instrument Sensitivity Check}

Continuing calibration was performed at required frequencies.
The percent differences (\%D) were less than or equal to \(30.0 \%\) for all compounds.
The signal to noise \((\mathrm{S} / \mathrm{N})\) ratio was within validation criteria for all compounds.
The percent differences (\%D) of the instrument sensitivity check (ISC) were less than or equal to \(30.0 \%\) for all compounds.

Retention times of all compounds in the calibration standards were within the established retention time windows.

\section*{V. Laboratory Blanks}

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

\section*{VI. Field Blanks}

Sample EB02-20200213 was identified as an equipment blank. No contaminants were found.

Sample SB01-20200212 (from SDG 2000314) was identified as a source blank. No contaminants were found.

\section*{VII. Matrix Spike/Matrix Spike Duplicates}

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. For IS72MW17S-20200213MS/MSD, no data were qualified for perfluorohexanoic acid (PFHxA), perfluorohexanesulfonic acid (PFHxS), and perfluorooctanoic acid (PFOA) percent recoveries (\%R) and perfluorooctanoic acid (PFOA), relative percent differences (RPD) outside the QC limits since the parent sample results were greater than 4 X the spike concentration. All other relative percent differences (RPD) were within QC limits.

\section*{VIII. Laboratory Control Samples}

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (\%R) were within QC limits.

\section*{IX. Field Duplicates}

Samples 1012MW15S-20200213 and DUP02-20200213 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:
\begin{tabular}{|c|c|c|c|c|c|c|}

\hline
\end{tabular}

\section*{X. Labeled Compounds}

All percent recoveries (\%R) for labeled compounds used to quantitate target compounds were within QC limits.

\section*{XI. Compound Quantitation}

All compound quantitations met validation criteria.

\section*{XII. Target Compound Identifications}

All target compound identifications met validation criteria with the following exceptions:
\begin{tabular}{|c|c|c|c|c||}
\hline \hline Sample & Compound & \begin{tabular}{c} 
lon Abundance Ratio \\
(Limits)
\end{tabular} & Flag & A or P \\
\hline \hline 1013WMW02SR-20200213 & Perfluorooctanesulfonic acid (PFOS) & \(4.901(1.304-3.912)\) & J (all detects) & A \\
\hline
\end{tabular}

\section*{XIII. System Performance}

The system performance was acceptable.

\section*{XIV. Overall Assessment of Data}

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to ion abundance ratio, data were qualified as estimated in one sample.
The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable.

\section*{Introduction}

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances in Groundwater in Carve-Outs 2, 5, 6, and 9 and Groundwater and Surface Water Near Operable Unit 3, Former Marine Corps Air Station Tustin, Tustin, California, with Addendum \#02 to Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances Sampling for Groundwater Remedial Action at Operable Unit 3, Installation Restoration Program Site 1 (February 2020), the U.S. Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3 (2019), and the DoD General Validation Guidelines (February 2018). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:
Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) by Environmental Protection Agency (EPA) Method 537 Modified and LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

All sample results were subjected to Stage 4 data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:
J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to nonconformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

\section*{I. Sample Receipt and Technical Holding Times}

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

\section*{II. LC/MS Instrument Performance Check}

Instrument performance was checked and the requirements were met.

\section*{III. Initial Calibration and Initial Calibration Verification}

Initial calibration was performed as required by the methods.
The percent relative standard deviations (\%RSD) were less than or equal to \(20.0 \%\) for all compounds.

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination \(\left(r^{2}\right)\) were greater than or equal to 0.990 .

For each calibration standard, all compounds were within \(70-130 \%\) of their true value.
The signal to noise ( \(\mathrm{S} / \mathrm{N}\) ) ratio was within validation criteria for all compounds.
Retention time windows were established as required by the methods.
The percent differences (\%D) of the initial calibration verification (ICV) standard were less than or equal to \(30.0 \%\) for all compounds.

\section*{IV. Continuing Calibration and Instrument Sensitivity Check}

Continuing calibration was performed at required frequencies.
The percent differences (\%D) were less than or equal to \(30.0 \%\) for all compounds.
The signal to noise \((S / N)\) ratio was within validation criteria for all compounds.
The percent differences (\%D) of the instrument sensitivity check (ISC) were less than or equal to \(30.0 \%\) for all compounds.

Retention times of all compounds in the calibration standards were within the established retention time windows.

\section*{V. Laboratory Blanks}

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

\section*{VI. Field Blanks}

Sample EB03-20200214 was identified as an equipment blank. No contaminants were found.

Sample SB01-20200212 (from SDG 2000314) was identified as a source blank. No contaminants were found.

\section*{VII. Matrix Spike/Matrix Spike Duplicates}

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. For IO03MW14S-20200214MS/MSD, no data were qualified for perfluorobutanesulfonic acid (PFBS), perfluorohexanoic acid (PFHxA), perfluoroheptanoic acid (PFHpA), and perfluorooctanoic acid (PFOA) percent outside the QC limits since the parent sample results were greater than 4 X the spike concentration.

Relative percent differences (RPD) were within QC limits with the following exceptions:
\begin{tabular}{||c|c|c|c|c||}
\hline \begin{tabular}{c} 
Spike ID \\
(Associated Samples)
\end{tabular} & Compound & \begin{tabular}{c} 
RPD \\
(Limits)
\end{tabular} & Flag & A or \(\mathbf{P}\) \\
\hline \hline \begin{tabular}{l} 
IO03MW14S-20200214MS/MSD \\
\((1003 M W 14 S-20200214)\)
\end{tabular} & MeFOSAA & \(32.5(\leq 30)\) & NA & - \\
\hline
\end{tabular}

For I003MW14S-20200214MS/MSD, no data were qualified for perfluorobutanesulfonic acid (PFBS), perfluorohexanoic acid (PFHxA), perfluoroheptanoic acid (PFHpA), and perfluorooctanoic acid (PFOA) relative percent differences (RPD) outside the QC limits since the parent sample results were greater than 4 X the spike concentration.

\section*{VIII. Laboratory Control Samples}

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (\%R) were within QC limits.

\section*{IX. Field Duplicates}

Samples IO03MW12S-20200214 and DUP04-20200214 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:
\begin{tabular}{|c|c|c|c|c|c|c|}
\hline \multirow[b]{2}{*}{Compound} & \multicolumn{2}{|l|}{Concentration (ug/L)} & \multirow[b]{2}{*}{\[
\begin{gathered}
\text { RPD } \\
\text { (Limits) } \\
\hline
\end{gathered}
\]} & \multirow[b]{2}{*}{Difference (Limits)} & \multirow[b]{2}{*}{Flag} & \multirow[b]{2}{*}{A or P} \\
\hline & I003MW12S-20200214 & DUP04-20200214 & & & & \\
\hline Perfluorobutanesulfonic acid (PFBS) & 0.0346 & 0.0349 & \(1(\leq 30)\) & - & - & - \\
\hline Perfluorohexanoic acid (PFHxA) & 0.164 & 0.155 & \(6(\leq 30)\) & - & - & - \\
\hline
\end{tabular}
\begin{tabular}{|c|c|c|c|c|c|c|}
\hline \multirow[b]{2}{*}{Compound} & \multicolumn{2}{|l|}{Concentration (ug/L)} & \multirow[b]{2}{*}{\[
\begin{gathered}
\text { RPD } \\
\text { (Limits) } \\
\hline
\end{gathered}
\]} & \multirow[b]{2}{*}{Difference (Limits)} & \multirow[b]{2}{*}{Flag} & \multirow[b]{2}{*}{A or P} \\
\hline & 1003MW12S-20200214 & DUP04-20200214 & & & & \\
\hline Perfluoroheptanoic acid (PFHpA) & 0.0538 & 0.0547 & \(2(\leq 30)\) & - & - & - \\
\hline Perfluorohexanesulfonic acid (PFHxS) & 0.190 & 0.166 & \(13(\leq 30)\) & - & - & - \\
\hline Perfluorooctanoic acid (PFOA) & 0.402 & 0.403 & \(0(\leq 30)\) & - & - & - \\
\hline Perfluorooctanesulfonic acid (PFOS) & 0.0519 & 0.0574 & \(10(\leq 30)\) & - & - & - \\
\hline
\end{tabular}

\section*{X. Labeled Compounds}

All percent recoveries (\%R) for labeled compounds used to quantitate target compounds were within QC limits with the following exceptions:
\begin{tabular}{||c|c|c|c|c|c||}
\hline Sample & \begin{tabular}{c} 
Labeled \\
Compound
\end{tabular} & \%R (Limits) & \begin{tabular}{c} 
Affected \\
Compound
\end{tabular} & Flag & A or P \\
\hline \hline DUP04-20200214 & 13C2-PFTeDA & \(39.9(50-150)\) & Perfluorotetradecanoic acid (PFTeDA) & NA & - \\
\hline
\end{tabular}

\section*{XI. Compound Quantitation}

All compound quantitations met validation criteria.

\section*{XII. Target Compound Identifications}

All target compound identifications met validation criteria.

\section*{XIII. System Performance}

The system performance was acceptable.

\section*{XIV. Overall Assessment of Data}

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

The quality control criteria reviewed were met and are considered acceptable.

\section*{VALIDATION FINDINGS WORKSHEET} Continuing Calibration Results Verification

METHOD: LC/MS PFAS (EPA Method 537M)
The percent difference (\%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

\section*{\% Difference \(=100\) * (ave. RRF - RRF)/ave. RRF} \(R R F=\left(A_{x}\right)\left(C_{i s}\right) /\left(A_{i s}\right)\left(C_{x}\right)\)

Where: ave. \(\mathrm{RRF}=\) initial calibration average RRF
RRF = continuing calibration RRF
\(A_{x}=\) Area of compound,
\(C_{x}=\) Concentration of compound \(\quad A_{i s}=\) Area of assocd internal standard
\(\mathrm{C}_{\mathrm{is}}=\) Concentration of internal standard

Comments: Refer to Continuing Calibration findings worksheet for list of qualifications and associated samples when reported results do not agree within \(10.0 \%\) of the recalculated results

VALIDATION FINDINGS WORKSHEET Matrix Spike/Matrix Spike Duplicates Results Verification

\section*{METHOD: LC/MS PFAS (EPA Method 537M)}

The percent recoveries (\%R) and Relative Percent Difference (RPD) of the matrix spike and matrix spike duplicate were recalculated for the compounds identified below using the following calculation:

Comments: Refer to Matrix Spike/Matrix Spike Duplicates findings worksheet for list of qualifications and associated samples when reported results do not agree within \(10.0 \%\) of the recalculated results.

METHOD: LC/MS PFAS (EPA Method 537M)
The percent recoveries (\%R) and Relative Percent Difference (RPD) of the laboratory control sample and laboratory control sample duplicate were recalculated for the compounds identified below using the following calculation:

\section*{Introduction}

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances in Groundwater in Carve-Outs 2, 5, 6, and 9 and Groundwater and Surface Water Near Operable Unit 3, Former Marine Corps Air Station Tustin, Tustin, California, with Addendum \#02 to Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances Sampling for Groundwater Remedial Action at Operable Unit 3, Installation Restoration Program Site 1 (February 2020), the U.S. Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3 (2019), and the DoD General Validation Guidelines (February 2018). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:
Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) by Environmental Protection Agency (EPA) Method 537 Modified and LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

All sample results were subjected to Stage 4 data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:
J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to nonconformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

\section*{I. Sample Receipt and Technical Holding Times}

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

\section*{II. LC/MS Instrument Performance Check}

Instrument performance was checked and the requirements were met.

\section*{III. Initial Calibration and Initial Calibration Verification}

Initial calibration was performed as required by the methods.
The percent relative standard deviations (\%RSD) were less than or equal to \(20.0 \%\) for all compounds.

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination ( \(r^{2}\) ) were greater than or equal to 0.990 .

For each calibration standard, all compounds were within \(70-130 \%\) of their true value.
The signal to noise ( \(\mathrm{S} / \mathrm{N}\) ) ratio was within validation criteria for all compounds.
Retention time windows were established as required by the methods.
The percent differences (\%D) of the initial calibration verification (ICV) standard were less than or equal to \(30.0 \%\) for all compounds.

\section*{IV. Continuing Calibration and Instrument Sensitivity Check}

Continuing calibration was performed at required frequencies.
The percent differences (\%D) were less than or equal to \(30.0 \%\) for all compounds.
The signal to noise \((\mathrm{S} / \mathrm{N})\) ratio was within validation criteria for all compounds.
The percent differences (\%D) of the instrument sensitivity check (ISC) were less than or equal to \(30.0 \%\) for all compounds.

Retention times of all compounds in the calibration standards were within the established retention time windows.

\section*{V. Laboratory Blanks}

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

\section*{VI. Field Blanks}

Sample EB04-20200219 was identified as an equipment blank. No contaminants were found.

Sample SB01-20200212 (from SDG 2000314) was identified as a source blank. No contaminants were found.

\section*{VII. Matrix Spike/Matrix Spike Duplicates}

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

\section*{VIII. Laboratory Control Samples}

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (\%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

\section*{IX. Field Duplicates}

No field duplicates were identified in this SDG.

\section*{X. Labeled Compounds}

All percent recoveries (\%R) for labeled compounds used to quantitate target compounds were within QC limits.

\section*{XI. Compound Quantitation}

All compound quantitations met validation criteria.

\section*{XII. Target Compound Identifications}

All target compound identifications met validation criteria with the following exceptions:
\begin{tabular}{|c|c|c|c|c|}
\hline Sample & Compound & Ion Abundance Ratio (Limits) & Flag & A or P \\
\hline IS720W06D-20200219 & Perfluorononanoic acid (PFNA) & 14.064 (2.6685-8.0055) & \(J\) (all detects) & A \\
\hline TW08S-20200219 & \begin{tabular}{l}

Perfluorooctanesulfonic acid (PFOS)
\end{tabular} & \[
\begin{gathered}
8.031(2.6685-8.005) \\
3.631(1.027-3.081)
\end{gathered}
\] & \begin{tabular}{l}
\(J\) (all detects) \\
\(J\) (all detects)
\end{tabular} & A \\
\hline TW09S-20200219 & Perfluorononanoic acid (PFNA) & 8.314 (2.6685-8.0055) & \(J\) (all detects) & A \\
\hline
\end{tabular}

\section*{XIII. System Performance}

The system performance was acceptable.

\section*{XIV. Overall Assessment of Data}

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to ion abundance ratio, data were qualified as estimated in three samples.
The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable.

\section*{Introduction}

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances in Groundwater in Carve-Outs 2, 5, 6, and 9 and Groundwater and Surface Water Near Operable Unit 3, Former Marine Corps Air Station Tustin, Tustin, California, with Addendum \#02 to Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances Sampling for Groundwater Remedial Action at Operable Unit 3, Installation Restoration Program Site 1 (February 2020), the U.S. Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3 (2019), and the DoD General Validation Guidelines (February 2018). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:
Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) by Environmental Protection Agency (EPA) Method 537 Modified and LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

All sample results were subjected to Stage 4 data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:
J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to nonconformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

\section*{I. Sample Receipt and Technical Holding Times}

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

\section*{II. LC/MS Instrument Performance Check}

Instrument performance was checked and the requirements were met.

\section*{III. Initial Calibration and Initial Calibration Verification}

Initial calibration was performed as required by the methods.
The percent relative standard deviations (\%RSD) were less than or equal to \(20.0 \%\) for all compounds.

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination \(\left(r^{2}\right)\) were greater than or equal to 0.990 .

For each calibration standard, all compounds were within \(70-130 \%\) of their true value.
The signal to noise ( \(\mathrm{S} / \mathrm{N}\) ) ratio was within validation criteria for all compounds.
Retention time windows were established as required by the methods.
The percent differences (\%D) of the initial calibration verification (ICV) standard were less than or equal to \(30.0 \%\) for all compounds.

\section*{IV. Continuing Calibration and Instrument Sensitivity Check}

Continuing calibration was performed at required frequencies.
The percent differences (\%D) were less than or equal to \(30.0 \%\) for all compounds.
The signal to noise \((S / N)\) ratio was within validation criteria for all compounds.
The percent differences (\%D) of the instrument sensitivity check (ISC) were less than or equal to \(30.0 \%\) for all compounds.

Retention times of all compounds in the calibration standards were within the established retention time windows.

\section*{V. Laboratory Blanks}

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

\section*{VI. Field Blanks}

Sample EB04-20200219 was identified as an equipment blank. No contaminants were found.

Sample SB01-20200212 (from SDG 2000314) was identified as a source blank. No contaminants were found.

\section*{VII. Matrix Spike/Matrix Spike Duplicates}

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

\section*{VIII. Laboratory Control Samples}

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (\%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

\section*{IX. Field Duplicates}

No field duplicates were identified in this SDG.

\section*{X. Labeled Compounds}

All percent recoveries (\%R) for labeled compounds used to quantitate target compounds were within QC limits.

\section*{XI. Compound Quantitation}

All compound quantitations met validation criteria.

\section*{XII. Target Compound Identifications}

All target compound identifications met validation criteria with the following exceptions:
\begin{tabular}{||l|l|c|c|c||}
\hline \multicolumn{1}{|c|}{ Sample } & \multicolumn{1}{|c|}{\begin{tabular}{c} 
Compound
\end{tabular}} & \begin{tabular}{c} 
lon Abundance Ratio \\
(Limits)
\end{tabular} & Flag & A or P \\
\hline \hline TW05S-20200220 & Perfluorononanoic acid (PFNA) & \(9.388(2.6685-8.0055)\) & J (all detects) & A \\
\hline TW21S-20200220 & Perfluorononanoic acid (PFNA) & \(16.165(3.6265-10.8795)\) & J (all detects) & A \\
\hline TW20S-20200220 & Perfluorohexanoic acid (PFHXA) & \(125.926(10.3835-31.1505)\) & J (all detects) & A \\
\hline TW18S-20200220 & Perfluoroheptanoic acid (PFHpA) & \(27.375(8.382-25.146)\) & J (all detects) & A \\
\hline
\end{tabular}

\section*{XIII. System Performance}

The system performance was acceptable.

\section*{XIV. Overall Assessment of Data}

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to ion abundance ratio, data were qualified as estimated in four samples.
The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable.

METHOD: LC/MS PFAS (EPA Method 537M)
The percent difference (\%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:
\% Difference \(=100^{*}\) (ave. RRF - RRF)/ave. RRF \(R R F=\left(A_{x}\right)\left(C_{i k}\right) /\left(A_{i s}\right)\left(C_{x}\right)\)

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
\(A_{x}=\) Area of compound,\(\quad A_{i s}=\) Area of associated internal standard
\(\mathrm{C}_{\mathrm{x}}=\) Concentration of compound,\(\quad \mathrm{C}_{\mathrm{is}}=\) Concentration of internal standard

Comments: Refer to Continuing Calibration findings worksheet for list of qualifications and associated samples when reported results do not agree within \(10.0 \%\) of the recalculated results

VALIDATION FINDINGS WORKSHEET
Laboratory Control Sample/Laboratory Control Sample Duplicates Results Verification

METHOD: LC/MS PFAS (EPA Method 537M)
The percent recoveries (\%R) and Relative Percent Difference (RPD) of the laboratory control sample and laboratory control sample duplicate were recalculated for the compounds identified below using the following calculation:
```

% Recovery = 100 * (SC/SA Where: SSC = Spike concentration
SA = Spike added
$R P D=1 \operatorname{LCSC}-\left.\operatorname{LCSDC}\right|^{*} 2 /(L C S C+L C S D C) \quad$ LCSC $=$ Laboratory control sample concentration LCSDC = Laboratory control sample duplicate concentration LCSILCSD samples: BOBO $\because 3-B S^{\prime} /$ BSO

\section*{Introduction}

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances in Groundwater in Carve-Outs 2, 5, 6, and 9 and Groundwater and Surface Water Near Operable Unit 3, Former Marine Corps Air Station Tustin, Tustin, California, with Addendum \#02 to Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances Sampling for Groundwater Remedial Action at Operable Unit 3, Installation Restoration Program Site 1 (February 2020), the U.S. Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3 (2019), and the DoD General Validation Guidelines (February 2018). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:
Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) by Environmental Protection Agency (EPA) Method 537 Modified and LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

All sample results were subjected to Stage 4 data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:
J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to nonconformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

\section*{I. Sample Receipt and Technical Holding Times}

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

\section*{II. LC/MS Instrument Performance Check}

Instrument performance was checked and the requirements were met.

\section*{III. Initial Calibration and Initial Calibration Verification}

Initial calibration was performed as required by the methods.
The percent relative standard deviations (\%RSD) were less than or equal to \(20.0 \%\) for all compounds.

In the case where the laboratory used a calibration curve to evaluate the compounds, all coefficients of determination \(\left(\mathrm{r}^{2}\right)\) were greater than or equal to 0.990 .

For each calibration standard, all compounds were within 70-130\% of their true value.
The signal to noise ( \(\mathrm{S} / \mathrm{N}\) ) ratio was within validation criteria for all compounds.
Retention time windows were established as required by the methods.
The percent differences (\%D) of the initial calibration verification (ICV) standard were less than or equal to \(30.0 \%\) for all compounds.

\section*{IV. Continuing Calibration and Instrument Sensitivity Check}

Continuing calibration was performed at required frequencies.
The percent differences (\%D) were less than or equal to \(30.0 \%\) for all compounds.
The signal to noise ( \(\mathrm{S} / \mathrm{N}\) ) ratio was within validation criteria for all compounds.
The percent differences (\%D) of the instrument sensitivity check (ISC) were less than or equal to \(30.0 \%\) for all compounds.

Retention times of all compounds in the calibration standards were within the established retention time windows.

\section*{V. Laboratory Blanks}

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

\section*{VI. Field Blanks}

Sample EB06-20200221 was identified as an equipment blank. No contaminants were found.

Sample SB01-20200212 (from SDG 2000314) was identified as a source blank. No contaminants were found.

\section*{VII. Matrix Spike/Matrix Spike Duplicates}

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

\section*{VIII. Laboratory Control Samples}

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the method. Percent recoveries (\%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

\section*{IX. Field Duplicates}

No field duplicates were identified in this SDG.

\section*{X. Labeled Compounds}

All percent recoveries (\%R) for labeled compounds used to quantitate target compounds were within QC limits.

\section*{XI. Compound Quantitation}

All compound quantitations met validation criteria.

\section*{XII. Target Compound Identifications}

All target compound identifications met validation criteria with the following exceptions:
\begin{tabular}{||c|c|c|c|c||}
\hline Sample & Compound & \begin{tabular}{c} 
Ion Abundance Ratio \\
(Limits)
\end{tabular} & Flag & A or P \\
\hline \hline TW14S-20200221 & Perfluorononanoic acid (PFNA) & \(8.665(2.6685-8.0055)\) & J (all detects) & A \\
\hline TW15S-20200221 & Perfluorononanoic acid (PFNA) & \(8.257(2.6685-8.0055)\) & J (all detects) & A \\
\hline
\end{tabular}

\section*{XIII. System Performance}

The system performance was acceptable.

\section*{XIV. Overall Assessment of Data}

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to ion abundance ratio, data were qualified as estimated in two samples.
The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable.

Comments: Refer to Continuing Calibration findings worksheet for list of qualifications and associated samples when reported results do not agree within \(10.0 \%\) of the recalculated results 2nd Reviewer: JV

METHOD: LC/MS PFAS (EPA Method 537M)
The percent recoveries (\%R) and Relative Percent Difference (RPD) of the laboratory control sample and laboratory control sample duplicate were recalculated for the compounds identified below using the following calculation:

Comments: Refer to Laboratory Control Sample/Laboratory Control Sample Duplicates findings worksheet for list of qualifications and associated samples when reported results do not agree within \(10.0 \%\) of the recalculated results.

\section*{VALIDATION FINDINGS WORKSHEET \\ Sample Calculation Verification}

\section*{METHOD: LC/MS PFOS/PFOAs (EPA Method 537M)}

Were all reported results recalculated and verified for all level IV samples?
Were all recalculated results for detected target compounds agree within \(10.0 \%\) of the reported results?

Concentration \(=\frac{\left(\mathrm{A}_{2}\right)\left(\mathrm{I}_{s}\right)\left(\mathrm{V}_{4}\right)(\mathrm{DF})(2.0)}{} \quad\) Example:
\(\left(\mathrm{A}_{\mathrm{is}}\right)(\mathrm{RRF})\left(\mathrm{V}_{0}\right)\left(\mathrm{V}_{\mathrm{i}}\right)(\% \mathrm{~S})\)
\(A_{x} \quad=\quad\) Area of the characteristic ion (EICP) for the compound to be measured
\(A_{\text {is }} \quad=\quad\) Area of the characteristic ion (EICP) for the specific internal standard
\(\mathrm{I}_{\mathrm{s}} \quad=\quad\) Amount of internal standard added in nanograms (hg)
\(V_{0} \quad=\quad\) Volume or weight of sample extract in milliliters \((\mathrm{ml})\) or grams (g)
\(V_{1} \quad=\quad\) Volume of extract injected in microliters (ul)
\(V_{t}=\) Volume of the concentrated extract in microliters (ul)
Df \(=\) Dilution Factor.
\(\%\) S = Percent solids, applicable to soil and solid matrices only.
\(2.0=\) Factor of 2 to account for GPC cleanup

Sane e. 2 FAt \(\times A\)
Conc. \(=\frac{\frac{1.51 e 4 \times 12.5}{1.33) e 4}-9.0585 \%, 1, x,}{(0.8 * 166)(\$ 52, x}\)
\(=0.0639 \mu \mu_{c}\)
