## Vista Work Order No. 2001409

Ms. Kimberly Shiroodi
KMEA
2423 Hoover Avenue
National City, CA 91950
Dear Ms. Shiroodi,
Enclosed are the results for the sample set received at Vista Analytical Laboratory on July 03, 2020 under your Project Name 'MCAS El Toro and Tustin, PFAS'.

Vista Analytical Laboratory is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at mmaier@vista-analytical.com.

Thank you for choosing Vista as part of your analytical support team.

Sincerely,

Martha Maier<br>Laboratory Director

## Vista Work Order No. 2001409

## Case Narrative

## Sample Condition on Receipt:

Two blank water samples and twelve groundwater samples were received in good condition and within the method temperature requirements. The samples were received and stored securely in accordance with Vista standard operating procedures and EPA methodology.

## Analytical Notes:

## PFAS Isotope Dilution/LC-MSMS Method Compliant with Table B-15 of QSM 5.3 (Aqueous)

The following samples contained particulate and were centrifuged prior to extraction:

| $\underline{\text { Laboratory ID }}$ |  | Sample Name |
| :--- | :--- | :--- |
| $2001409-04$ |  | 222MW09D-20200701 |
| $2001409-05$ |  | DUP02-20200701 |
| $2001409-06$ |  | IS72MW17D-20200701 |
| $2001409-07$ |  | DUP03-20200701 |
| $2001409-13$ |  | TW07D-20200702 |
| $2001409-14$ |  | TW05D-20200702 |

The samples were extracted and analyzed for a selected list of PFAS using Isotope Dilution and LC-MS/MS compliant with Table B-15 of QSM 5.3. The results for PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Results for all other analytes include the linear isomers only.

## Holding Times

The samples were extracted and analyzed within the hold times.

## Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above $1 / 2$ the LOQ. The OPR recoveries were within the method acceptance criteria.

As requested, an MS/MSD were performed on samples "IS72MW16DR-20200701" and "I003MW01D-20200701". The MS/MSD recoveries and RPDs for sample "IS72MW16DR-20200701" were within the method acceptance criteria. The MS/MSD recovieres and/ or RPDs for sample "I003MW01D-20200701" were outside of the acceptance criteria for PFBS, PFHxA, PFHpA, PFHxS, PFOA, PFNA, and PFOS.

The labeled standard recoveries outside the acceptance criteria are flagged with an "H" qualifier.

## Vista Work Order No. 2001409

Ms. Kimberly Shiroodi
KMEA
2423 Hoover Avenue
National City, CA 91950
Dear Ms. Shiroodi,
Enclosed are the results for the sample set received at Vista Analytical Laboratory on July 03, 2020 under your Project Name 'MCAS El Toro and Tustin, PFAS'.

Vista Analytical Laboratory is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at mmaier@vista-analytical.com.

Thank you for choosing Vista as part of your analytical support team.

Sincerely,

Martha Maier<br>Laboratory Director

## Vista Work Order No. 2001409

## Case Narrative

## Sample Condition on Receipt:

Two blank water samples and twelve groundwater samples were received in good condition and within the method temperature requirements. The samples were received and stored securely in accordance with Vista standard operating procedures and EPA methodology.

## Analytical Notes:

## PFAS Isotope Dilution/LC-MSMS Method Compliant with Table B-15 of QSM 5.3 (Aqueous)

The following samples contained particulate and were centrifuged prior to extraction:

| $\underline{\text { Laboratory ID }}$ |  | Sample Name |
| :--- | :--- | :--- |
| $2001409-04$ |  | 222MW09D-20200701 |
| $2001409-05$ |  | DUP02-20200701 |
| $2001409-06$ |  | IS72MW17D-20200701 |
| $2001409-07$ |  | DUP03-20200701 |
| $2001409-13$ |  | TW07D-20200702 |
| $2001409-14$ |  | TW05D-20200702 |

The samples were extracted and analyzed for a selected list of PFAS using Isotope Dilution and LC-MS/MS compliant with Table B-15 of QSM 5.3. The results for PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Results for all other analytes include the linear isomers only.

## Holding Times

The samples were extracted and analyzed within the hold times.

## Quality Control

The Initial Calibration and Continuing Calibration Verifications met the method acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above $1 / 2$ the LOQ. The OPR recoveries were within the method acceptance criteria.

As requested, an MS/MSD were performed on samples "IS72MW16DR-20200701" and "I003MW01D-20200701". The MS/MSD recoveries and RPDs for sample "IS72MW16DR-20200701" were within the method acceptance criteria. The MS/MSD recovieres and/ or RPDs for sample "I003MW01D-20200701" were outside of the acceptance criteria for PFBS, PFHxA, PFHpA, PFHxS, PFOA, PFNA, and PFOS.

The labeled standard recoveries outside the acceptance criteria are flagged with an "H" qualifier.

## DATA QUALIFIERS \& ABBREVIATIONS

| B | This compound was also detected in the method blank |
| :---: | :---: |
| Conc. | Concentration |
| CRS | Cleanup Recovery Standard |
| D | Dilution |
| DL | Detection limit |
| E | The associated compound concentration exceeded the calibration range of the instrument |
| H | Recovery and/or RPD was outside laboratory acceptance limits |
| I | Chemical Interference |
| IS | Internal Standard |
| J | The amount detected is below the Reporting Limit/LOQ |
| LOD | Limit of Detection |
| LOQ | Limit of Quantitation |
| M | Estimated Maximum Possible Concentration (CA Region 2 projects only) |
| NA | Not applicable |
| ND | Not Detected |
| OPR | Ongoing Precision and Recovery sample |
| P | The reported concentration may include contribution from chlorinated diphenyl ether(s). |
| Q | The ion transition ratio is outside of the acceptance criteria. |
| RL | Reporting Limit |
| TEQ | Toxic Equivalency |
| U | Not Detected (specific projects only) |
| * | See Cover Letter |

Unless otherwise noted, solid sample results are reported in dry weight. Tissue samples are reported in wet weight.

Wood Environment \& Infrastructure Solutions, Inc.
September 3, 2020
7376 SW Durham Road
Portland, OR 97224
Attn: Ms. Kimberly Shiroodi
Kimberly.Shiroodi@woodplc.com
SUBJECT: Revised MCAS EI Toro \& Tustin PFAs, Data Validation

Dear Ms. Shiroodi,
Enclosed are the revised validation reports for the fraction listed below. These SDGs were received on August $4^{\text {th }}$ and $19^{\text {th }}, 2020$. Attachment 1 is a summary of the samples that were reviewed for each analysis.

## LDC Project \#48792_RV2:

## SDG \#

2001357, 2001409, 2001417
2001436, 2001444, 2001472

## Fraction

Perfluoroalkyl \& Polyfluoroalkyl Substances

The data validation was performed under Stage 4 guidelines. The analyses were validated using the following documents, as applicable to each method:

- Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances in Groundwater in Carve-Outs 2,5,6 and 9 and Groundwater and Surface Water Near Operable Unit 3, Former Marine Corps Air Station Tustin, Tustin, California with Addendum \#02 to Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances Sampling for Groundwater Remedial Action at Operable Unit 3, Installation Restoration Program Site 1; February 2020
- U.S. Department of Defense Quality Systems Manual for Environmental Laboratories, Version 5.3, 2019
- DoD General Validation Guidelines, February 2018

Please feel free to contact us if you have any questions.
Sincerely,

Pei Geng
Pgeng@lab-data.com
Project Manager/Senior Chemist

# Laboratory Data Consultants, Inc. Data Validation Report 

| Project/Site Name: | MCAS El Toro and Tustin PFAS |
| :--- | :--- |
| LDC Report Date: | August 25,2020 |
| Parameters: | Perfluoroalkyl \& Polyfluoroalkyl Substances |
| Validation Level: | Stage 4 |
| Laboratory: | Vista Analytical Laboratory |

Sample Delivery Group (SDG): 2001357

| Sample Identification | Laboratory Sample <br> Identification | Matrix | Collection <br> Date |
| :--- | :--- | :--- | :---: |
| IO06MW06S-20200624 | $2001357-03$ | Water | $06 / 24 / 20$ |
| DUP01-20200624 | $2001357-04$ | Water | $06 / 24 / 20$ |

## Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances in Groundwater in Carve-Outs 2, 5, 6, and 9 and Groundwater and Surface Water Near Operable Unit 3, Former Marine Corps Air Station Tustin, Tustin, California, with Addendum \#02 to Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances Sampling for Groundwater Remedial Action at Operable Unit 3, Installation Restoration Program Site 1 (February 2020), the U.S. Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3 (2019), and the DoD General Validation Guidelines (February 2018). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:
Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) by Environmental Protection Agency (EPA) Method 537 Modified and LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

All sample results were subjected to Stage 4 data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:
$\mathrm{J} \quad$ (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to nonconformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

## I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

## II. LC/MS Instrument Performance Check

Instrument performance was checked and the requirements were met.

## III. Initial Calibration and Initial Calibration Verification

Initial calibration was performed as required by the methods.
A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination $\left(r^{2}\right)$ was greater than or equal to 0.990 .

For each calibration standard, all compounds were within 70-130\% of their true value.
The signal to noise $(\mathrm{S} / \mathrm{N})$ ratio was within validation criteria for all compounds.
Retention time windows were established as required by the methods.
The percent differences (\%D) of the initial calibration verification (ICV) standard were less than or equal to $30.0 \%$ for all compounds.

## IV. Continuing Calibration and Instrument Sensitivity Check

Continuing calibration was performed at required frequencies.
The percent differences (\%D) were less than or equal to $30.0 \%$ for all compounds.
The signal to noise $(\mathrm{S} / \mathrm{N})$ ratio was within validation criteria for all compounds.
The percent differences (\%D) of the instrument sensitivity check (ISC) were less than or equal to $30.0 \%$ for all compounds.

Retention times of all compounds in the calibration standards were within the established retention time windows.

## V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

## VI. Field Blanks

Sample EB01-20200624 was identified as an equipment blank. No contaminants were found.

Sample SB01-20200624 was identified as a source blank. No contaminants were found.

## VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

## VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (\%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

## IX. Field Duplicates

Samples I006MW06S-20200624 and DUP01-20200624 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

| Compound | Concentration (ug/L) |  | $\begin{gathered} \text { RPD } \\ \text { (Limits) } \\ \hline \end{gathered}$ | Difference (Limits) | Flag | A or P |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 222MW09D-20200701 | DUP02-20200701 |  |  |  |  |
| PFBS | 0.0819 | 0.0824 | 1 ( $\leq 30$ ) | - | - | - |
| PFHxA | 0.6050 | 0.5880 | 3 ( $\leq 30$ ) | - | - | - |
| PFHpA | 0.3370 | 0.339 | $1(\leq 30)$ | - | - | - |
| PFHxS | 0.5150 | 0.5350 | $4(\leq 30)$ | - | - | - |
| PFOA | 0.2680 | 0.3150 | 16 ( $\leq 30$ ) | - | - | - |
| PFNA | 0.0044 | 0.0049 | - | 0.00049 ( 50.00394 ) | - | - |
| PFOS | 0.0906 | 0.1060 | 16 ( $\leq 30$ ) | - | - | - |

## X. Labeled Compounds

All percent recoveries (\%R) for labeled compounds used to quantitate target compounds were within QC limits.

## XI. Compound Quantitation

All compound quantitations met validation criteria.

## XII. Target Compound Identifications

All target compound identifications met validation criteria.

## XIII. System Performance

The system performance was acceptable.

## XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

The quality control criteria reviewed were met and are considered acceptable.

## METHOD: LC/MS Perfluoroalkyl \& Polyfluoroalkyl Substances (EPA Method 537M/QSM 5.3 Table B-15)

The samples listed below were reviewed for each of the following validation areas. Validation findings are noted in attached validation findings worksheets.

| Note: | $A=$ Acceptable | $N D=$ No compounds detected | $D=$ Duplicate | SB=Source blank |
| :--- | :--- | :--- | :--- | :--- |
|  | $N=$ Not provided/applicable | $R=$ Rinsate | TB $=$ Trip blank | OTHER: |
|  | $S W=$ See worksheet | PB $=$ Field blank | BB $=$ Equipment blank |  |

Page: 1 of 2 Reviewer: 2nd Reviewer: $\qquad$

Method: LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

| Validation Area | Yes | No | NA | Findings/Comments |
| :---: | :---: | :---: | :---: | :---: |
| 1. Technical holding times |  |  |  |  |
| Were all technical holding times met? | , |  |  |  |
| Were cooler temperature criteria met? | $\checkmark$ |  |  |  |
| II. LCIMS Instrument performance check |  |  |  |  |
| Were the instrument performance reviewed and found to be within the validation criteria? |  |  |  |  |
| III. Initial calibration and Initial calibration verification |  |  |  |  |
| Did the laboratory perform a 5-point calibration prior to sample analysis? |  |  |  |  |
| Were all percent relative standard deviations (\%RSD) $\leq 20 \%$ ? |  |  |  |  |
| Was a curve fit used for evaluation? If yes, did the initial calibration meet the coefficient of determination ( $\mathrm{r}^{2}$ ) criteria of $\geq 0.990$ ? |  |  |  |  |
| Were all analytes within $70-130 \%$ or percent differences (\%D) $\leq 30 \%$ of their true value for each calibration standard? |  |  |  |  |
| Was the signal to noise ( $S / N$ ) ratio for all compounds within the validation criteria? |  |  |  |  |
| Were the retention time windows properly established? |  |  |  |  |
| Was an initial calibration verification (ICV) standard analyzed after each initial calibration for each instrument? | $1$ |  |  |  |
| Were all ICV percent differences (\%D) of the initial calibration verification $\leq 30 \%$ ? |  |  |  |  |
| IV. Continuing calibration and Instrument sensitivity check |  |  |  |  |
| Was a continuing calibration analyzed prior to sample analysis, after every 10 samples and at the end of the analytical sequence? |  |  |  |  |
| Were all percent differences (\%D) of the continuing calibration $\leq 30 \%$ ? |  |  |  |  |
| Were all the retention times within the acceptance windows? |  |  |  |  |
| Was the signal to noise ( $\mathrm{S} / \mathrm{N}$ ) ratio for all compounds within the validation criteria? |  |  |  |  |
| Were all percent differences (\%D) of the Instrument Sensitivity Check $\leq 30 \%$ ? |  |  |  |  |
| V. Laboratory Blanks |  |  |  |  |
| Was a laboratory blank associated with every sample in this SDG? |  |  |  |  |
| Was a laboratory blank analyzed for each matrix and concentration? |  |  |  |  |
| Was there contamination in the laboratory blanks? |  |  |  |  |
| Vl. Field blanks |  |  |  |  |
| Were field blanks identified in this SDG? |  |  |  |  |
| Were target compounds detected in the field blanks? |  | / |  |  |

Method: LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3
The percent difference (\%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:
\% Difference $=100^{*}($ aveRRF - RRF $) /$ aveRRF
$R R F=(A x)($ Cis $) /($ Ais $)(C x)$

Where:
aveRRF = initial calib average RRF $\mathrm{Cx}=$ Concentration of compound,
RRF = continuing calib RRF
Ax = Area of compound

Ais = Area of associated internal standard
Cis = Concentration of internal standard

Method: LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

The percent recoveries (\%R) and relative percent differences (RPD) of the laboratory control sample and laboratory control duplicate were recalculated for the compounds identified below using the following calculation:

SSC = (Area spike) (Conc IS) / (Area IS) (average RRF spike)
\%Recovery $=100$ * SSC/SA Where:

| SSC = Spiked concentration | LCS = Laboratory control spike recovery |
| :--- | :--- |
| SA = Spike added | LCSD = Laboratory control spike duplicate recovery |

RPD = | LCS - LCSD | * 2/(LCS + LCSD)

## VALIDATION FINDINGS WORKSHEET

Sample Results Verification

Method: LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3
Compound results for all Level IV samples reported with a positive detect were recalculated and verified using the following equation:

```
Concentration = (Ax) (Cis) (Vt) (DF)
(Ais) (RRF) (Vo)
Where:
    Ax = Area or height of the peak for the compound to be measured
    Ais = Area or height of the peak for the internal standard
    Cis = Concentration of the internal standard
    DF = Dilution factor
    Vt = Volume of extract in milliters (mL)
    RRF = Average relative response factor
    Vo = Volume of sample in liters (L)
```

## Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances in Groundwater in Carve-Outs 2, 5, 6, and 9 and Groundwater and Surface Water Near Operable Unit 3, Former Marine Corps Air Station Tustin, Tustin, California, with Addendum \#02 to Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances Sampling for Groundwater Remedial Action at Operable Unit 3, Installation Restoration Program Site 1 (February 2020), the U.S. Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3 (2019), and the DoD General Validation Guidelines (February 2018). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:
Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) by Environmental Protection Agency (EPA) Method 537 Modified and LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

All sample results were subjected to Stage 4 data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:
J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to nonconformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as $P$ (protocol) or $A$ (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

## I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

## II. LC/MS Instrument Performance Check

Instrument performance was checked and the requirements were met.

## III. Initial Calibration and Initial Calibration Verification

Initial calibration was performed as required by the methods.
A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination ( $\mathrm{r}^{2}$ ) was greater than or equal to 0.990 .

For each calibration standard, all compounds were within 70-130\% of their true value.
The signal to noise $(\mathrm{S} / \mathrm{N})$ ratio was within validation criteria for all compounds.
Retention time windows were established as required by the methods.
The percent differences (\%D) of the initial calibration verification (ICV) standard were less than or equal to $30.0 \%$ for all compounds.

## IV. Continuing Calibration and Instrument Sensitivity Check

Continuing calibration was performed at required frequencies.
The percent differences (\%D) were less than or equal to $30.0 \%$ for all compounds.
The signal to noise $(\mathrm{S} / \mathrm{N})$ ratio was within validation criteria for all compounds.
The percent differences (\%D) of the instrument sensitivity check (ISC) were less than or equal to $30.0 \%$ for all compounds.

Retention times of all compounds in the calibration standards were within the established retention time windows.

## V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

## VI. Field Blanks

Samples EB02-20200701 and EB03-20200702 were identified as equipment blanks. No contaminants were found.

## VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) sample analysis was performed on an associated project sample. Percent recoveries (\%R) were within QC limits with the following exceptions:

| Spike ID <br> (Associated Samples) | Compound | MS (\%R) <br> (Limits) | MSD (\%R) <br> (Limits) | Flag | A or P |
| :---: | :---: | :---: | :---: | :---: | :---: |
| (003MW01D-20200701MS/MSD <br> (1003MW01D-20200701) | PFNA | $133(69-130)$ | - | J (all detects) | A |

For I003MW01D-20200701MS/MSD, no data were qualified for PFBS and PFHpA percent recoveries (\%R) outside the QC limits since the parent sample results were greater than $4 X$ the spike concentration.

PFHxA, PFHxS, PFOA, and PFOS percent recoveries (\%R) and PFHxA, PFHxS, and PFOS relative percent differences (RPD) were not within the QC limits for I003MW01D20200701MS/MSD. No data were qualified for MS/MSD samples analyzed greater than or equal to a 5 X dilution.

Relative percent differences (RPD) were within QC limits.

## VIII. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the methods. Percent recoveries (\%R) were within QC limits.

## IX. Field Duplicates

Samples 222MW09D-20200701 and DUP02-20200701, samples IS72MW17D20200701 and DUP03-20200701, and samples I003MW02D-20200701 and DUP0420200701 were identified as field duplicates. No results were detected in any of the samples with the following exceptions:

| Compound | Concentration (ug/L) |  | $\begin{gathered} \text { RPD } \\ \text { (Limits) } \end{gathered}$ | Difference (Limits) | Flag | A or $P$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 222MW09D-20200701 | DUP02-20200701 |  |  |  |  |

| Compound | Concentration (ug/L) |  | RPD (Limits) | Difference (Limits) | Flag | A or P |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | IS72MW17D-20200701 | DUP03-20200701 |  |  |  |  |
| PFBS | 0.0262 | 0.0285 | $8(\leq 30)$ | - | - | - |
| PFHXA | 0.185 | 0.189 | $2(\leq 30)$ | - | - | - |
| PFHpA | 0.0980 | 0.0945 | $4(\leq 30)$ | - | - | - |
| PFHxS | 0.0788 | 0.0737 | $7(\leq 30)$ | - | - | - |
| PFOA | 0.781 | 0.755 | $3(\leq 30)$ | - | - | - |
| PFNA | 0.00477 | 0.00546 | - | $0.00069(\leq 0.00409)$ | - | - |
| PFOS | 0.0432 | 0.0418 | $3(\leq 30)$ | - | - | - |

| Compound | Concentration (ug/L) |  | $\begin{gathered} \text { RPD } \\ \text { (Limits) } \\ \hline \end{gathered}$ | Difference (Limits) | Flag | A or P |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1003MW02D-20200701 | DUP04-20200701 |  |  |  |  |
| PFBS | 0.364 | 0.397 | $9(\leq 30)$ | - | - | - |
| PFHxA | 2.59 | 2.57 | $1(\leq 30)$ | - | - | - |
| PFHpA | 0.537 | 0.529 | 2 ( 530 ) | - | - | - |
| PFHxS | 2.49 | 2.59 | $4(\leq 30)$ | - | - | - |
| PFOA | 11.1 | 11.0 | $1(\leq 30)$ | - | - | - |
| PFNA | 0.00392 | 0.00425 | - | 0.00033 ( $\leq 0.00400$ ) | - | - |
| PFOS | 0.879 | 0.972 | $10(\leq 30)$ | - | - | - |

## X. Labeled Compounds

All percent recoveries (\%R) for labeled compounds used to quantitate target compounds were within QC limits with the following exceptions:

| Sample | Labeled <br> Compound | \%R (Limits) | Affected <br> Compound | Flag | A or P |
| :--- | :--- | :---: | :--- | :--- | :---: |
| TW07D-20200702 | 13C2-PFDoA |  |  |  |  |
| 13C2-PFTeDA | $46.2(50-150)$ <br> $12.6(50-150)$ | PFDoA <br> PFTrDA <br> 11CI-PF30UdS <br> PFTeDA | NA | - |  |
| TW05D-20200702 | 13C2-PFTeDA | $28.0(50-150)$ | PFTeDA | NA | - |

## XI. Compound Quantitation

All compound quantitations met validation criteria.

## XII. Target Compound Identifications

All target compound identifications met validation criteria with the following exceptions:

| Sample | Compound | lon Abundance Ratio <br> (Limits) | Flag | A or P |
| :--- | :---: | :---: | :---: | :---: |
| 222MW09D-20200701 | PFOS | $3.506(1.003-3.008)$ | J (all detects) | P |
| DUP02-20200701 | PFOS | $3.255(1.003-3.008)$ | J (all detects) | P |

## XIII. System Performance

The system performance was acceptable.

## XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to MS/MSD \%R and ion abundance ratio, data were qualified as estimated in three samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable.

## Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances in Groundwater in Carve-Outs 2, 5, 6, and 9 and Groundwater and Surface Water Near Operable Unit 3, Former Marine Corps Air Station Tustin, Tustin, California, with Addendum \#02 to Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances Sampling for Groundwater Remedial Action at Operable Unit 3, Installation Restoration Program Site 1 (February 2020), the U.S. Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3 (2019), and the DoD General Validation Guidelines (February 2018). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:
Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) by Environmental Protection Agency (EPA) Method 537 Modified and LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

All sample results were subjected to Stage 4 data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:
J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to nonconformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

## I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

## II. LC/MS Instrument Performance Check

Instrument performance was checked and the requirements were met.

## III. Initial Calibration and Initial Calibration Verification

Initial calibration was performed as required by the methods.
A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination ( $r^{2}$ ) was greater than or equal to 0.990 .

For each calibration standard, all compounds were within 70-130\% of their true value.
The signal to noise $(\mathrm{S} / \mathrm{N})$ ratio was within validation criteria for all compounds.
Retention time windows were established as required by the methods.
The percent differences (\%D) of the initial calibration verification (ICV) standard were less than or equal to $30.0 \%$ for all compounds.

## IV. Continuing Calibration and Instrument Sensitivity Check

Continuing calibration was performed at required frequencies.
The percent differences (\%D) were less than or equal to $30.0 \%$ for all compounds.
The signal to noise $(\mathrm{S} / \mathrm{N})$ ratio was within validation criteria for all compounds.
The percent differences (\%D) of the instrument sensitivity check (ISC) were less than or equal to $30.0 \%$ for all compounds.

Retention times of all compounds in the calibration standards were within the established retention time windows.

## V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

## VI. Field Blanks

Sample EB04-20200706 was identified as an equipment blank. No contaminants were found.

## VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

## VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (\%R) were within QC limits.

Relative percent differences (RPD) were within QC limits with the following exceptions:

| LCS ID <br> (Associated Samples) | Compound | RPD <br> (Limits) | Flag | A or P |
| :---: | :---: | :---: | :---: | :---: |
| BOG0039-BS1/BSD1 <br> (All samples in SDG 2001417) | PFTeDA | $35.7(\leq 30)$ | NA |  |

## IX. Field Duplicates

No field duplicates were identified in this SDG.

## X. Labeled Compounds

All percent recoveries (\%R) for labeled compounds used to quantitate target compounds were within QC limits with the following exceptions:

| Sample | Labeled <br> Compound | \%R (Limits) | Affected <br> Compound | Flag | A or P |
| :--- | :--- | :---: | :--- | :--- | :--- |
| TW06D-20200706 | 13C2-PFTeDA | $27.0(50-150)$ | PFTeDA | NA | - |
| TW25D-20200706 | d5-EtFOSAA |  |  |  |  |
| 13C2-PFDoA |  |  |  |  |  |
| 13C2-PFTeDA | $46.4(50-150)$ <br> $42.7(50-150)$ <br> $17.3(50-150)$ | EtFOSAA <br> PFDoA <br> PFTrDA <br> 11 Cl-PF30UdS <br> PFTeDA | NA | - |  |
| TW26D-20200706 | 13C2-PFTeDA | $24.3(50-150)$ | PFTeDA | NA | - |

## XI. Compound Quantitation

All compound quantitations met validation criteria.

## XII. Target Compound Identifications

All target compound identifications met validation criteria.

## XIII. System Performance

The system performance was acceptable.

## XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

The quality control criteria reviewed were met and are considered acceptable.

## VALIDATION FINDINGS WORKSHEET <br> Sample Results Verification

$\qquad$

Method: LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3
Compound results for all Level IV samples reported with a positive detect were recalculated and verified using the following equation:

$$
\text { Concentration }=\frac{(\mathrm{Ax})(\mathrm{Cis})(\mathrm{Vt})(\mathrm{DF})}{(\mathrm{Ais})(\mathrm{RRF})(\mathrm{Vo})}
$$

Where:
$A x=$ Area or height of the peak for the compound to be measured
Ais = Area or height of the peak for the internal standard
Cis = Concentration of the internal standard
DF = Dilution factor
$\mathrm{Vt}=$ Volume of extract in milliters ( mL )
$R R F=$ Average relative response factor
Vo $=$ Volume of sample in liters (L)

## Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances in Groundwater in Carve-Outs 2, 5, 6, and 9 and Groundwater and Surface Water Near Operable Unit 3, Former Marine Corps Air Station Tustin, Tustin, California, with Addendum \#02 to Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances Sampling for Groundwater Remedial Action at Operable Unit 3, Installation Restoration Program Site 1 (February 2020), the U.S. Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3 (2019), and the DoD General Validation Guidelines (February 2018). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:
Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) by Environmental Protection Agency (EPA) Method 537 Modified and LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

All sample results were subjected to Stage 4 data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:
J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to nonconformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

X The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

## I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

## II. LC/MS Instrument Performance Check

Instrument performance was checked and the requirements were met.

## III. Initial Calibration and Initial Calibration Verification

Initial calibration was performed as required by the methods.
A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination $\left(r^{2}\right)$ was greater than or equal to 0.990 .

For each calibration standard, all compounds were within 70-130\% of their true value.
The signal to noise $(\mathrm{S} / \mathrm{N})$ ratio was within validation criteria for all compounds.
Retention time windows were established as required by the methods.
The percent differences (\%D) of the initial calibration verification (ICV) standard were less than or equal to $30.0 \%$ for all compounds.

## IV. Continuing Calibration and Instrument Sensitivity Check

Continuing calibration was performed at required frequencies.
The percent differences (\%D) were less than or equal to $30.0 \%$ for all compounds.
The signal to noise (S/N) ratio was within validation criteria for all compounds.
The percent differences (\%D) of the instrument sensitivity check (ISC) were less than or equal to $30.0 \%$ for all compounds.

Retention times of all compounds in the calibration standards were within the established retention time windows.

## V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

## VI. Field Blanks

Samples EB05-20200707 and EB06-20200708 were identified as equipment blanks. No contaminants were found.

## VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

## VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (\%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

## IX. Field Duplicates

No field duplicates were identified in this SDG.

## X. Labeled Compounds

All percent recoveries (\%R) for labeled compounds used to quantitate target compounds were within QC limits with the following exceptions:

| Sample | Labeled Compound | \%R (Limits) | Affected Compound | Flag | A or P |
| :---: | :---: | :---: | :---: | :---: | :---: |

## XI. Compound Quantitation

All compound quantitations met validation criteria.

## XII. Target Compound Identifications

All target compound identifications met validation criteria.

## XIII. System Performance

The system performance was acceptable.

## XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to labeled compound $\%$ R, data were qualified for recommended exclusion in four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable.

Method: LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3
The percent difference (\%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:
\% Difference $=100$ * (aveRRF - RRF $) /$ aveRRF
RRF $=($ Ax $)($ Cis $) /($ (Ais $)(C x)$

Where:
aveRRF $=$ initial calib average $R R F \quad C x=$ Concentration of compound,
RRF = continuing calib RRF
Ax = Area of compound

Ais = Area of associated internal standard
Cis = Concentration of internal standard

Method: LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3
The percent recoveries (\%R) and relative percent differences (RPD) of the laboratory control sample and laboratory control duplicate were recalculated for the compounds identified below using the following calculation:

SSC = (Area spike) (Conc IS) / (Area IS) (average RRF spike)

| \%Recovery $=100 *$ SSC/SA | Where: |  |
| :--- | :--- | :--- |
|  | SSC = Spiked concentration | LCS = Laboratory control spike recovery |
|  | SA $=$ Spike added | LCSD $=$ Laboratory control spike duplicate recovery |

## VALIDATION FINDINGS WORKSHEET

Sample Results Verification $\qquad$

Method: LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3
Compound results for all Level IV samples reported with a positive detect were recalculated and verified using the following equation:

```
Concentration=(Ax)(Cis) (Vt) (DF)
(Ais) (RRF) (Vo)
```

Where:
Ax = Area or height of the peak for the compound to be measured
Ais = Area or height of the peak for the internal standard
Cis = Concentration of the internal standard
DF = Dilution factor
$\mathrm{Vt}=$ Volume of extract in milliters (mL)
RRF = Average relative response factor
Vo $=$ Volume of sample in liters (L)

## Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances in Groundwater in Carve-Outs 2, 5, 6, and 9 and Groundwater and Surface Water Near Operable Unit 3, Former Marine Corps Air Station Tustin, Tustin, California, with Addendum \#02 to Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances Sampling for Groundwater Remedial Action at Operable Unit 3, Installation Restoration Program Site 1 (February 2020), the U.S. Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3 (2019), and the DoD General Validation Guidelines (February 2018). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:
Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) by Environmental Protection Agency (EPA) Method 537 Modified and LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

All sample results were subjected to Stage 4 data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:
J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to nonconformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

X The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

## I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

## II. LC/MS Instrument Performance Check

Instrument performance was checked and the requirements were met.

## III. Initial Calibration and Initial Calibration Verification

Initial calibration was performed as required by the methods.
A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination $\left(r^{2}\right)$ was greater than or equal to 0.990 .

For each calibration standard, all compounds were within $70-130 \%$ of their true value.
The signal to noise $(\mathrm{S} / \mathrm{N})$ ratio was within validation criteria for all compounds.
Retention time windows were established as required by the methods.
The percent differences (\%D) of the initial calibration verification (ICV) standard were less than or equal to $30.0 \%$ for all compounds.

## IV. Continuing Calibration and Instrument Sensitivity Check

Continuing calibration was performed at required frequencies.
The percent differences (\%D) were less than or equal to $30.0 \%$ for all compounds.
The signal to noise $(\mathrm{S} / \mathrm{N})$ ratio was within validation criteria for all compounds.
The percent differences (\%D) of the instrument sensitivity check (ISC) were less than or equal to $30.0 \%$ for all compounds.

Retention times of all compounds in the calibration standards were within the established retention time windows.

## V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

## VI. Field Blanks

Sample EB07-20200709 was identified as an equipment blank. No contaminants were found.

## VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

## VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (\%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

## IX. Field Duplicates

No field duplicates were identified in this SDG.

## X. Labeled Compounds

All percent recoveries (\%R) for labeled compounds used to quantitate target compounds were within QC limits with the following exceptions:

| Sample | Labeled Compound | \%R (Limits) | Affected <br> Compound | Flag | A or $P$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| TW10D-20200709 | 13C2-PFTeDA | 14.5 (50-150) | PFTeDA | NA | - |
| TW11D-20200709 | d3-MeFOSAA 13C2-PFUnA d5-EtFOSAA 13C2-PFDoA | $\begin{aligned} & 40.0(50-150) \\ & 43.6(50-150) \\ & 42.9(50-150) \\ & 27.5(50-150) \end{aligned}$ | MeFOSAA <br> EtFOSAA <br> PFUnA <br> PFDoA <br> PFTrDA <br> 11CI-PF30UdS | NA | - |
| TW11D-20200709 | 13C2-PFTeDA | 6.00 (50-150) | PFTeDA | x | P |
| TW12D-20200709 | d3-MeFOSAA 13C2-PFUnA d5-EtFOSAA 13C2-PFDoA | $\begin{aligned} & 44.9(50-150) \\ & 42.9(50-150) \\ & 41.2(50-150) \\ & 24.1(50-150) \end{aligned}$ | MeFOSAA <br> EtFOSAA <br> PFUnA <br> PFDoA <br> PFTrDA <br> 11Cl-PF30UdS | NA | - |
| TW12D-20200709 | 13C2-PFTeDA | 5.20 (50-150) | PFTeDA | X | P |
| TW13D-20200709 | 13C2-PFTeDA | 10.8 (50-150) | PFTeDA | NA | - |

## XI. Compound Quantitation

All compound quantitations met validation criteria.

## XII. Target Compound Identifications

All target compound identifications met validation criteria with the following exceptions:

| Sample | Compound | Ion Abundance Ratio <br> (Limits) | Flag | A or P |
| :---: | :---: | :---: | :---: | :---: |
| TW13D-20200709 | PFNA | $26.223(6.217-18.651)$ | J (all detects) | P |

## XIII. System Performance

The system performance was acceptable.

## XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to labeled compound \%R, data were qualified for recommended exclusion in two samples.

Due to labeled compounds $\% R$ and ion abundance ratio, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable.

Method: LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

The percent difference (\%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:
\% Difference $=100$ * (aveRRF - RRF)/aveRRF RRF $=(\mathrm{Ax})(\mathrm{Cis}) /($ Ais $)(\mathrm{Cx})$

## Where:

aveRRF = initial calib average RRF $\quad \mathrm{Cx}=$ Concentration of compound,
RRF = continuing calib RRF
Ax = Area of compound

Ais = Area of associated internal standard
Cis $=$ Concentration of internal standard

## Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances in Groundwater in Carve-Outs 2, 5, 6, and 9 and Groundwater and Surface Water Near Operable Unit 3, Former Marine Corps Air Station Tustin, Tustin, California, with Addendum \#02 to Final Sampling and Analysis Plan for Per- and Polyfluoroalkyl Substances Sampling for Groundwater Remedial Action at Operable Unit 3, Installation Restoration Program Site 1 (February 2020), the U.S. Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.3 (2019), and the DoD General Validation Guidelines (February 2018). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following methods:
Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) by Environmental Protection Agency (EPA) Method 537 Modified and LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

All sample results were subjected to Stage 4 data validation, which is comprised of the quality control (QC) summary forms as well as the raw data, to confirm sample quantitation and identification.

The following are definitions of the data qualifiers utilized during data validation:
J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to nonconformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the compound or analyte should be considered non-detected at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

X The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team, but exclusion of the data is recommended.

NA (Not Applicable): The non-conformance discovered during data validation demonstrates a high bias, while the affected compound or analyte in the associated sample(s) was reported as not detected by the laboratory and did not warrant the qualification of the data.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

## I. Sample Receipt and Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

## II. LC/MS Instrument Performance Check

Instrument performance was checked and the requirements were met.

## III. Initial Calibration and Initial Calibration Verification

Initial calibration was performed as required by the methods.
A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination $\left(r^{2}\right)$ was greater than or equal to 0.990 .

For each calibration standard, all compounds were within 70-130\% of their true value.
The signal to noise ( $\mathrm{S} / \mathrm{N}$ ) ratio was within validation criteria for all compounds.
Retention time windows were established as required by the methods.
The percent differences (\%D) of the initial calibration verification (ICV) standard were less than or equal to $30.0 \%$ for all compounds.

## IV. Continuing Calibration and Instrument Sensitivity Check

Continuing calibration was performed at required frequencies.
The percent differences (\%D) were less than or equal to $30.0 \%$ for all compounds.
The signal to noise ( $\mathrm{S} / \mathrm{N}$ ) ratio was within validation criteria for all compounds.
The percent differences (\%D) of the instrument sensitivity check (ISC) were less than or equal to $30.0 \%$ for all compounds.

Retention times of all compounds in the calibration standards were within the established retention time windows.

## V. Laboratory Blanks

Laboratory blanks were analyzed as required by the methods. No contaminants were found in the laboratory blanks.

## VI. Field Blanks

Sample 08-2020710 was identified as an equipment blank. No contaminants were found.

## VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

## VIII. Laboratory Control Samples

Laboratory control samples (LCS) and laboratory control samples duplicates (LCSD) were analyzed as required by the methods. Percent recoveries (\%R) were within QC limits. Relative percent differences (RPD) were within QC limits.

## IX. Field Duplicates

No field duplicates were identified in this SDG.

## X. Labeled Compounds

All percent recoveries (\%R) for labeled compounds used to quantitate target compounds were within QC limits with the following exceptions:

| Sample | Labeled Compound | \%R (Limits) | Affected Compound | Flag | A or P |
| :---: | :---: | :---: | :---: | :---: | :---: |
| TW24S-20200710 | 13C2-PFTeDA | 36.1 (50-150) | PFTeDA | NA | - |
| TW15D-20200710 | 13C2-PFDoA | 46.9 (50-150) | PFDoA <br> PFTrDA <br> 11CI-PF30UdS | NA | - |
| TW15D-20200710 | 13C2-PFTeDA | 6.90 (50-150) | PFTEDA | X | P |
| TW16D-20200710 | d3-MeFOSAA 13C2-PFUnA d5-EtFOSAA 13C2-PFDoA | $\begin{aligned} & 49.9(50-150) \\ & 44.2(50-150) \\ & 46.5(50-150) \\ & 28.8(50-150) \end{aligned}$ | MeFOSAA <br> PFUnA <br> EtFOSAA <br> PFDoA <br> PFTrDA <br> 11CI-PF30UdS | NA | - |
| TW16D-20200710 | 13C2-PFTeDA | 5.50 (50-150) | PFTeDA | x | P |

## XI. Compound Quantitation

All compound quantitations met validation criteria.

## XII. Target Compound Identifications

All target compound identifications met validation criteria.

## XIII. System Performance

The system performance was acceptable.

## XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to labeled compounds $\%$ R, data were qualified for recommended exclusion in two samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable

Method: LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3

The percent recoveries (\%R) and relative percent differences (RPD) of the laboratory control sample and laboratory control duplicate were recalculated for the compounds identified below using the following calculation:

SSC = (Area spike) (Conc IS) / (Area IS) (average RRF spike)
\%Recovery $=100$ *SSC/SA Where:

SSC = Spiked concentration LCS = Laboratory control spike recovery
SA = Spike added
LCSD = Laboratory control spike duplicate recovery
RPD $=\mid$ LCS - LCSD | $2 /(L C S+$ LCSD $)$

Sample Results Verification

2nd Reviewer: $\qquad$

Method: LC/MS/MS and Isotope Dilution Compliant with Table B-15 of DoD QSM 5.3
Compound results for all Level IV samples reported with a positive detect were recalculated and verified using the following equation:

```
Concentration=
    (Ais) (RRF) (Vo)
    Where:
        Ax = Area or height of the peak for the compound to be measured
        Ais = Area or height of the peak for the internal standard
        Cis = Concentration of the internal standard
        DF = Dilution factor
        Vt = Volume of extract in milliters (mL)
    RRF = Average relative response factor
    Vo = Volume of sample in liters (L)
```
