## Overview

The sample set for NAS JRB Willow Grove, SDG 320-44805-1, consisted of seven (7) drinking water samples and six (6) FRB samples. All samples were analyzed for select perfluorinated alkyl acids including pentadecafluorooctanoic acid (PFOA), perfluorobutane sulfonic acid (PFBS), perfluoroheptanoic acid (PFHpA), perfluorohexanesulfonic acid (PFHxS), perfluorononanoic acid (PFNA) and perfluorooctane sulfonic acid (PFOS). One field duplicate pair, WGNA-103118-RW-0500 / WGNA-103118-DUP-51, was included in this SDG.

The samples were collected by Tetra Tech on October 31, 2018 and analyzed by Test America-Sacramento. All sample analyses were conducted in accordance with EPA Method 537 version 1.1 analytical and reporting protocols.

The data contained in this SDG was validated with regard to the following parameters: data completeness, holding times, mass calibration, mass spectral acquisition rate, instrument sensitivity check, initial/continuing calibrations, ion transitions, laboratory method/FRB results, surrogate spike recoveries, laboratory control sample / laboratory control sample duplicate results, injected internal standard areas and recoveries, field duplicate results, chromatographic resolution, analyte identification, analyte quantitation, and detection limits. Areas of concern are listed below.

## Major

None.

## Minor

The following surrogate recoveries were below the $70 \%$ quality control limit.

> WGNA-103118-FRB-3933
> WGNA-10318-FRB-3385
> NAWC-103118-RW-054

Surrogate<br>13C2-PFHxA; 13C2-PFDA<br>13C2-PFHxA; 13C2-PFDA<br>13C2-PFHxA; 13C2-PFDA<br>13C2-PFHxA; 13C2-PFDA<br>13C2-PFHxA<br>13C2-PFHxA; 13C2-PFDA<br>13C2-PFHxA; 13C2-PFDA

The nondetected results reported for the affected samples were qualified as estimated (UJ). The detected results were qualified as estimated (J) as a result of conflicting noncompliances or estimated biased low $(\mathrm{J}-)$ as a result of several low recovery noncompliances.

All laboratory control sample (LCS) percent recoveries were below the $70 \%$ quality control limit affecting all samples. The laboratory control sample duplicate (LCSD) percent recoveries were within quality control limits. All LCS/LCSD relative percent differences (RPDs) were greater than the $30 \%$ quality control limits. The nondetected results reported for the affected samples were qualified as estimated (UJ). The detected results were qualified as estimated $(\mathrm{J})$ as a result of conflicting noncompliances or estimated biased low $(\mathrm{J}-)$ as a result of several low recovery noncompliances.

The internal standard areas compared to the ending continuing calibration areas for 13-PFOA and PFOS were below the quality control limits for sample WGNA-103118-RW-3933. The internal areas compared to the initial calibration and beginning continuing calibration were with quality control limits. The sample was re-extracted outside hold time and the results between the original and reanalysis were comparable. The detected results reported in the affected sample were qualified as estimated (J).

The internal standard areas compared to the beginning continuing calibration areas for 13-PFOA and PFOS were below the quality control limits for samples WGNA-103118-RW-3385 and NAWC-103118-FRB-054. The internal areas compared to the initial calibration and ending continuing calibration were with quality control limits. The samples were re-extracted outside hold time and the results between the original and reanalysis were comparable. The detected and nondetected results reported in the affected samples were qualified as estimated (J) and (UJ), respectively.

## Notes

All samples were re-extracted, as part of the corrective action process, 16 days past the 14 day hold time due to LCS percent recoveries for all compounds below the $70 \%$ quality control limit and several surrogate and injected internal standard recoveries outside the quality control limits. The original LCSD percent recoveries were within the quality control limits. The original results were used for validation as EPA Method 537 version 1.1 states that sample results are only valid if samples are extracted within sample holding times. No total sample results for PFOA and PFOS were above the $70 \mathrm{ng} / \mathrm{L}$ EPA advisory limit for either the original or re-extracted results.

Samples with detections and their associated FRBs are summarized below. No detected results were present in the FRBs.

## Sample

NAWC-103118-RW-029
NAWC-103118-RW-054
WGNA-103118-DUP-51
WGNA-103118-RW-0500
WGNA-103118-RW-3385
WGNA-103118-RW-3876
WGNA-103118-RW-3933

## Associated FRB

NAWC-103118-FRB-029
NAWC-103118-FRB-054
WGNA-103118-FRB-0500
WGNA-103118-FRB-0500
WGNA-103118-FRB-3385
WGNA-103118-FRB-3876
WGNA-103118-FRB-3933

Non-detected results were reported to the Limit of Detection (LOD).
The buffering agent Trizma was added to all drinking water samples.

SDG: 320-44805-1

## Executive Summary

Laboratory Performance: Several surrogate recoveries were below the quality control limit. All LCS recoveries were below the quality control limits. Several internal standard areas were outside the quality control limits.

Other Factors Affecting Data Quality: Results below the RL were estimated.

The data for these analyses were reviewed with reference to the Environmental Protection Agency document EPA/600/R-08/092, Method 537, "Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)", (September 2009), US EPA National Functional Guidelines for Organic Data Review (January 2017), and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (July 2013) as applicable. The text of this report has been formulated to address only those areas affecting data quality.

## Data Qualifier Definitions

The following definitions provide brief explanations of the validation qualifiers assigned to results in the data review process.

| $\mathbf{U}$ | The analyte was analyzed for, but was not detected at a level greater than or equal to <br> the level of the adjusted detection limit. |
| :---: | :--- |
| $\mathbf{J}$ | The result is an estimated quantity. The associated numerical value is the <br> approximate concentration of the analyte in the sample (due either to the quality of <br> the data generated because certain quality control criteria were not met, or the <br> concentration of the analyte was below the reporting limit). |
| $\mathbf{J +}$ | The result is an estimated quantity, but the result may be biased high. |$|$| $\mathbf{J -}$ | The result is an estimated quantity, but the result may be biased low. |
| :---: | :--- |

Appendix A
Qualified Analytical Results

## Qualifier Codes:

A = Lab Blank Contamination
B = Field Blank Contamination
C = Calibration Noncompliance (i.e., \% RSDs, \%Ds, ICVs, CCVs, RRFs, etc.)
C01 = GC/MS Tuning Noncompliance
D = MS/MSD Recovery Noncompliance
E = LCS/LCSD Recovery Noncompliance
F = Lab Duplicate Imprecision
$\mathrm{G}=$ Field Duplicate Imprecision
H = Holding Time Exceedance
I = ICP Serial Dilution Noncompliance
$J=$ ICP PDS Recovery Noncompliance; MSA's $r<0.995$
$\mathrm{K}=$ ICP Interference - includes ICS \% R Noncompliance
L = Instrument Calibration Range Exceedance
$\mathrm{M}=$ Sample Preservation Noncompliance
$\mathrm{N}=$ Internal Standard Noncompliance
N01 = Internal Standard Recovery Noncompliance Dioxins
N02 = Recovery Standard Noncompliance Dioxins
N03 = Clean-up Standard Noncompliance Dioxins
O = Poor Instrument Performance (i.e., base-time drifting)
$P=$ Uncertainty near detection limit (<2 x IDL for inorganics and <CRQL for organics)
$\mathrm{Q}=$ Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
R = Surrogates Recovery Noncompliance
$\mathrm{S}=$ Pesticide/PCB Resolution
T = \% Breakdown Noncompliance for DDT and Endrin
$\mathrm{U}=$ RPD between columns/detectors $>40 \%$ for positive results determined via GC/HPLC
$\mathrm{V}=$ Non-linear calibrations; correlation coefficient $\mathrm{r}<0.995$
$\mathrm{W}=$ EMPC result
$\mathrm{X}=$ Signal to noise response drop
$Y=$ Percent solids $<30 \%$
$Z \quad=$ Uncertainty at 2 standard deviations is greater than sample activity
Z1 = Tentatively Identified Compound considered presumptively present
Z2 = Tentatively Identified Compound column bleed
Z3 = Tentatively Identified Compound aldol condensate
Z4 = Sample activity is less than the at uncertainty at 3 standard deviations and greater than the MDC
Z5 = Sample activity is less than the at uncertainty at 3 standard deviations and less than the MDC

## Qualifiers

LCMS

| Qualifier | Qualifier Description |
| :--- | :--- |
| Q | One or more quality control criteria failed. |
| J | Estimated: The analyte was positively identified; the quantitation is an estimation |
| M | Manual integrated compound. |
| U | Undetected at the Limit of Detection. |
| H | Sample was prepped or analyzed beyond the specified holding time |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
| :---: | :---: |
| $\bar{\square}$ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| \%R | Percent Recovery |
| CFL | Contains Free Liquid |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| PQL | Practical Quantitation Limit |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |

## Job Narrative

320-44805-1

## Receipt

The samples were received on 11/1/2018 10:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was $3.3^{\circ} \mathrm{C}$.

## LCMS

Method(s) 537: The first level standard from the initial calibration curve is used to evaluate the tune criteria. The instrument mass windows are set at $+/-0.5 \mathrm{amu}$; therefore, detection of the analyte serves as verification that the assigned mass is within $+/-0.5 \mathrm{amu}$ of the true value, which meets the DoD/DOE QSM tune criterion.

Method(s) 537: The laboratory control sample (LCS) for preparation batch 320-258878 and analytical batch 320-259497 recovered outside control limits for all the target analytes. The failing LCS caused the RPD between the LCS and LCSD to also be out of control. The associated samples were re-prepared and re-analyzed outside holding time. Both sets of data have been reported.

Method(s) 537: Surrogate recovery for the following samples was outside control limits: WGNA-103118-RW-3876 (320-44805-1), WGNA-103118-FRB-3876 (320-44805-2), NAWC-103118-RW-029 (320-44805-3), NAWC-103118-FRB-029 (320-44805-4), WGNA-103118-FRB-3933 (320-44805-6), WGNA-103118-FRB-3385 (320-44805-10), NAWC-103118-RW-054 (320-44805-11), (LCS 320-258878/2-A) and (MB 320-258878/1-A). Re-extraction and re-analysis was performed outside of holding time and the surrogate recoveries were within limits. Both sets of data have been reported..

Method(s) 537: Internal standard (ISTD) response for the following samples was outside control limits: NAWC-103118-FRB-054 (320-44805-12). The samples were re-extracted and re-analyzed outside of holding time and the ISTD response was within limits. Both sets of data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Organic Prep

Method(s) 537: The following sample was observed to be light yellow after eluding.
Method(s) 537: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 320-262132.

Method(s) 537: The following samples were re-prepared outside of preparation holding time due to low LCS and surrogate recoveries: WGNA-103118-RW-3876 (320-44805-1), WGNA-103118-FRB-3876 (320-44805-2), NAWC-103118-RW-029 (320-44805-3), NAWC-103118-FRB-029 (320-44805-4), WGNA-103118-RW-3933 (320-44805-5), WGNA-103118-FRB-3933 (320-44805-6), WGNA-103118-RW-0500 (320-44805-7), WGNA-103118-FRB-0500 (320-44805-8), WGNA-103118-RW-3385 (320-44805-9), WGNA-103118-FRB-3385 (320-44805-10), NAWC-103118-RW-054 (320-44805-11), NAWC-103118-FRB-054 (320-44805-12) and WGNA-103118-DUP-51 (320-44805-13) in preparation batch 320-262132.

Method(s) 537: The following sample: NAWC-103118-RW-054 (320-44805-11) in preparation batch 320-262132 was observed to be a yellow color and contain sediment prior to extraction.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
