1.0 INTRODUCTION

This memorandum provides the results of environmental sampling conducted in September and October 2014 at the Former Construction Equipment Department (CED) Area at Former Naval Construction Battalion Center (NCBC) Davisville, North Kingstown, Rhode Island (Figure 1-1). The field investigation and data analysis were conducted per the specifications documented in Revision 1 of the Sampling and Analysis Plan (SAP) for Total Petroleum Hydrocarbon (TPH) Delineation at CED Area Site 03 and Additional Groundwater Sampling at Sites 02 and 03 and the Drum Removal Area (Tetra Tech, 2014a). A site location map for the CED Area is presented as Figure 1-2. Field and laboratory analytical data are summarized in tables and figures included as part of this memorandum and the following information is provided in appendices:

- Attachment B – Field Sampling Forms.
- Attachment C – Data Tables.
- Attachment D – Data Validation Memoranda.

The following narrative is organized per the following four problem statements presented in the SAP:

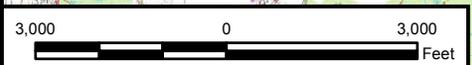

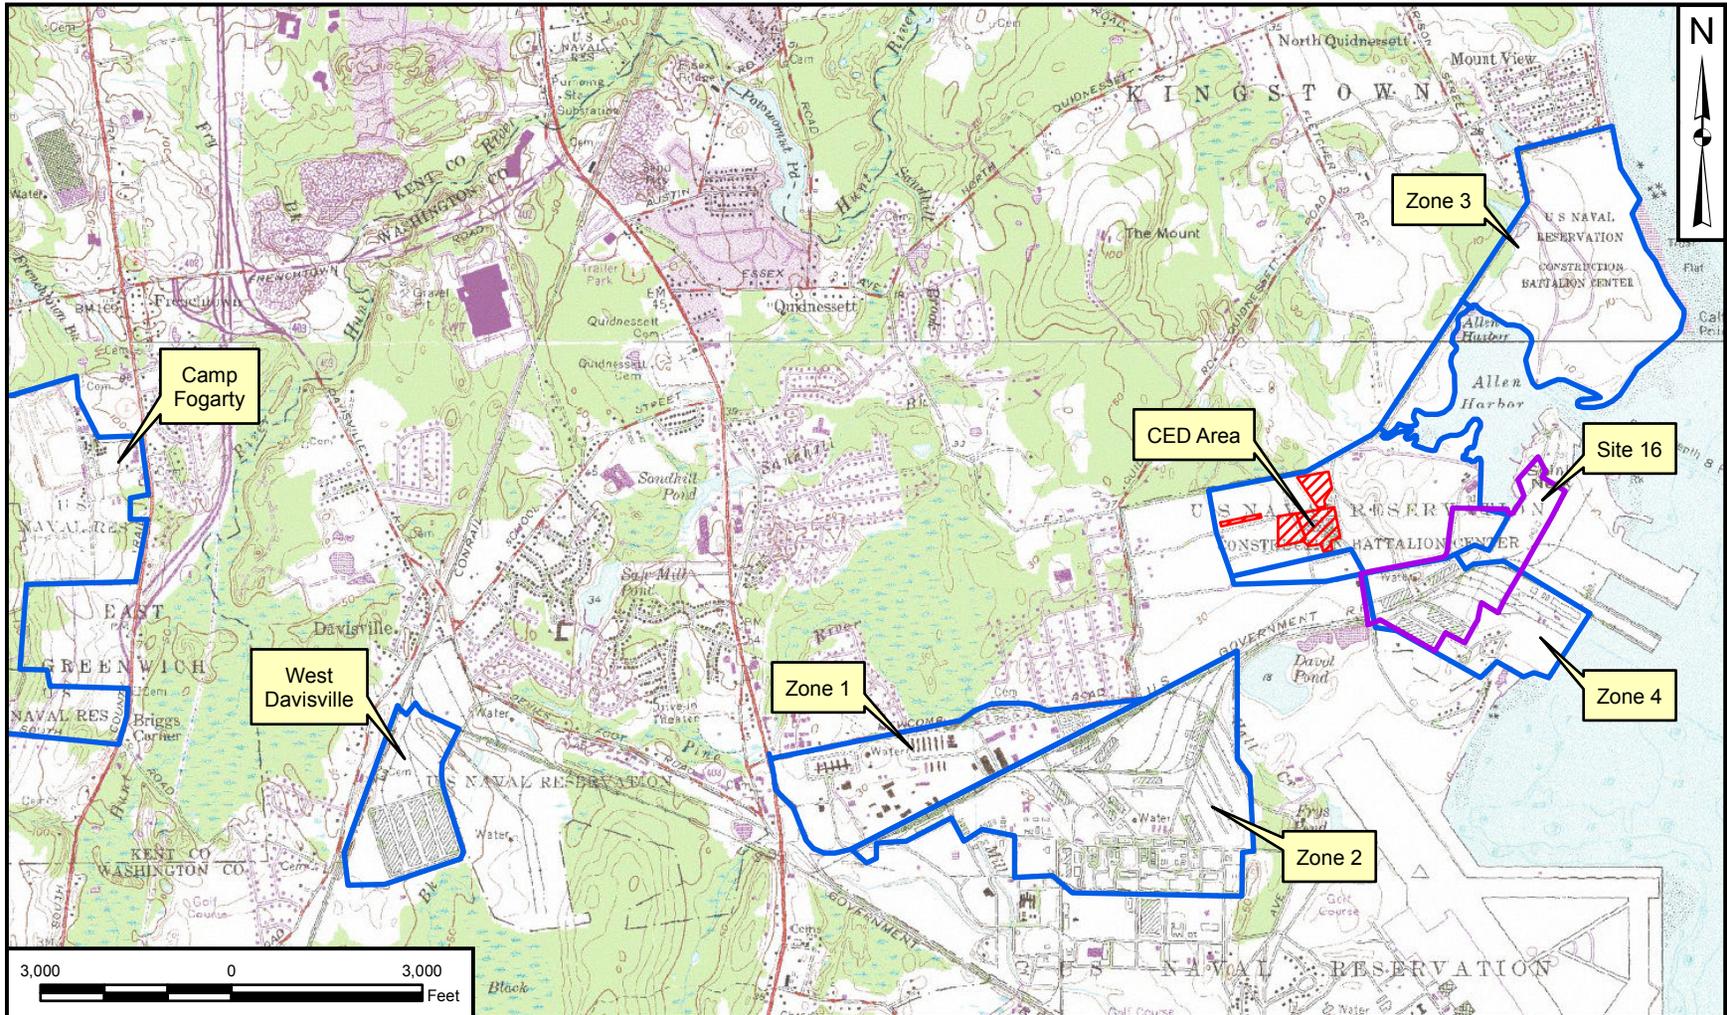

Problem No. 1: Delineation of TPH-Contaminated Soils at Site 03.

Problem No. 2: Characterization of Groundwater at Sites 02/03 (in Support of the Evaluation of Leaching Potential).

Problem No. 3: Characterization of Vapor Intrusion Potential at Sites 02/03.

Problem No. 4: Characterization of Groundwater at CED Area Drum Removal Area.

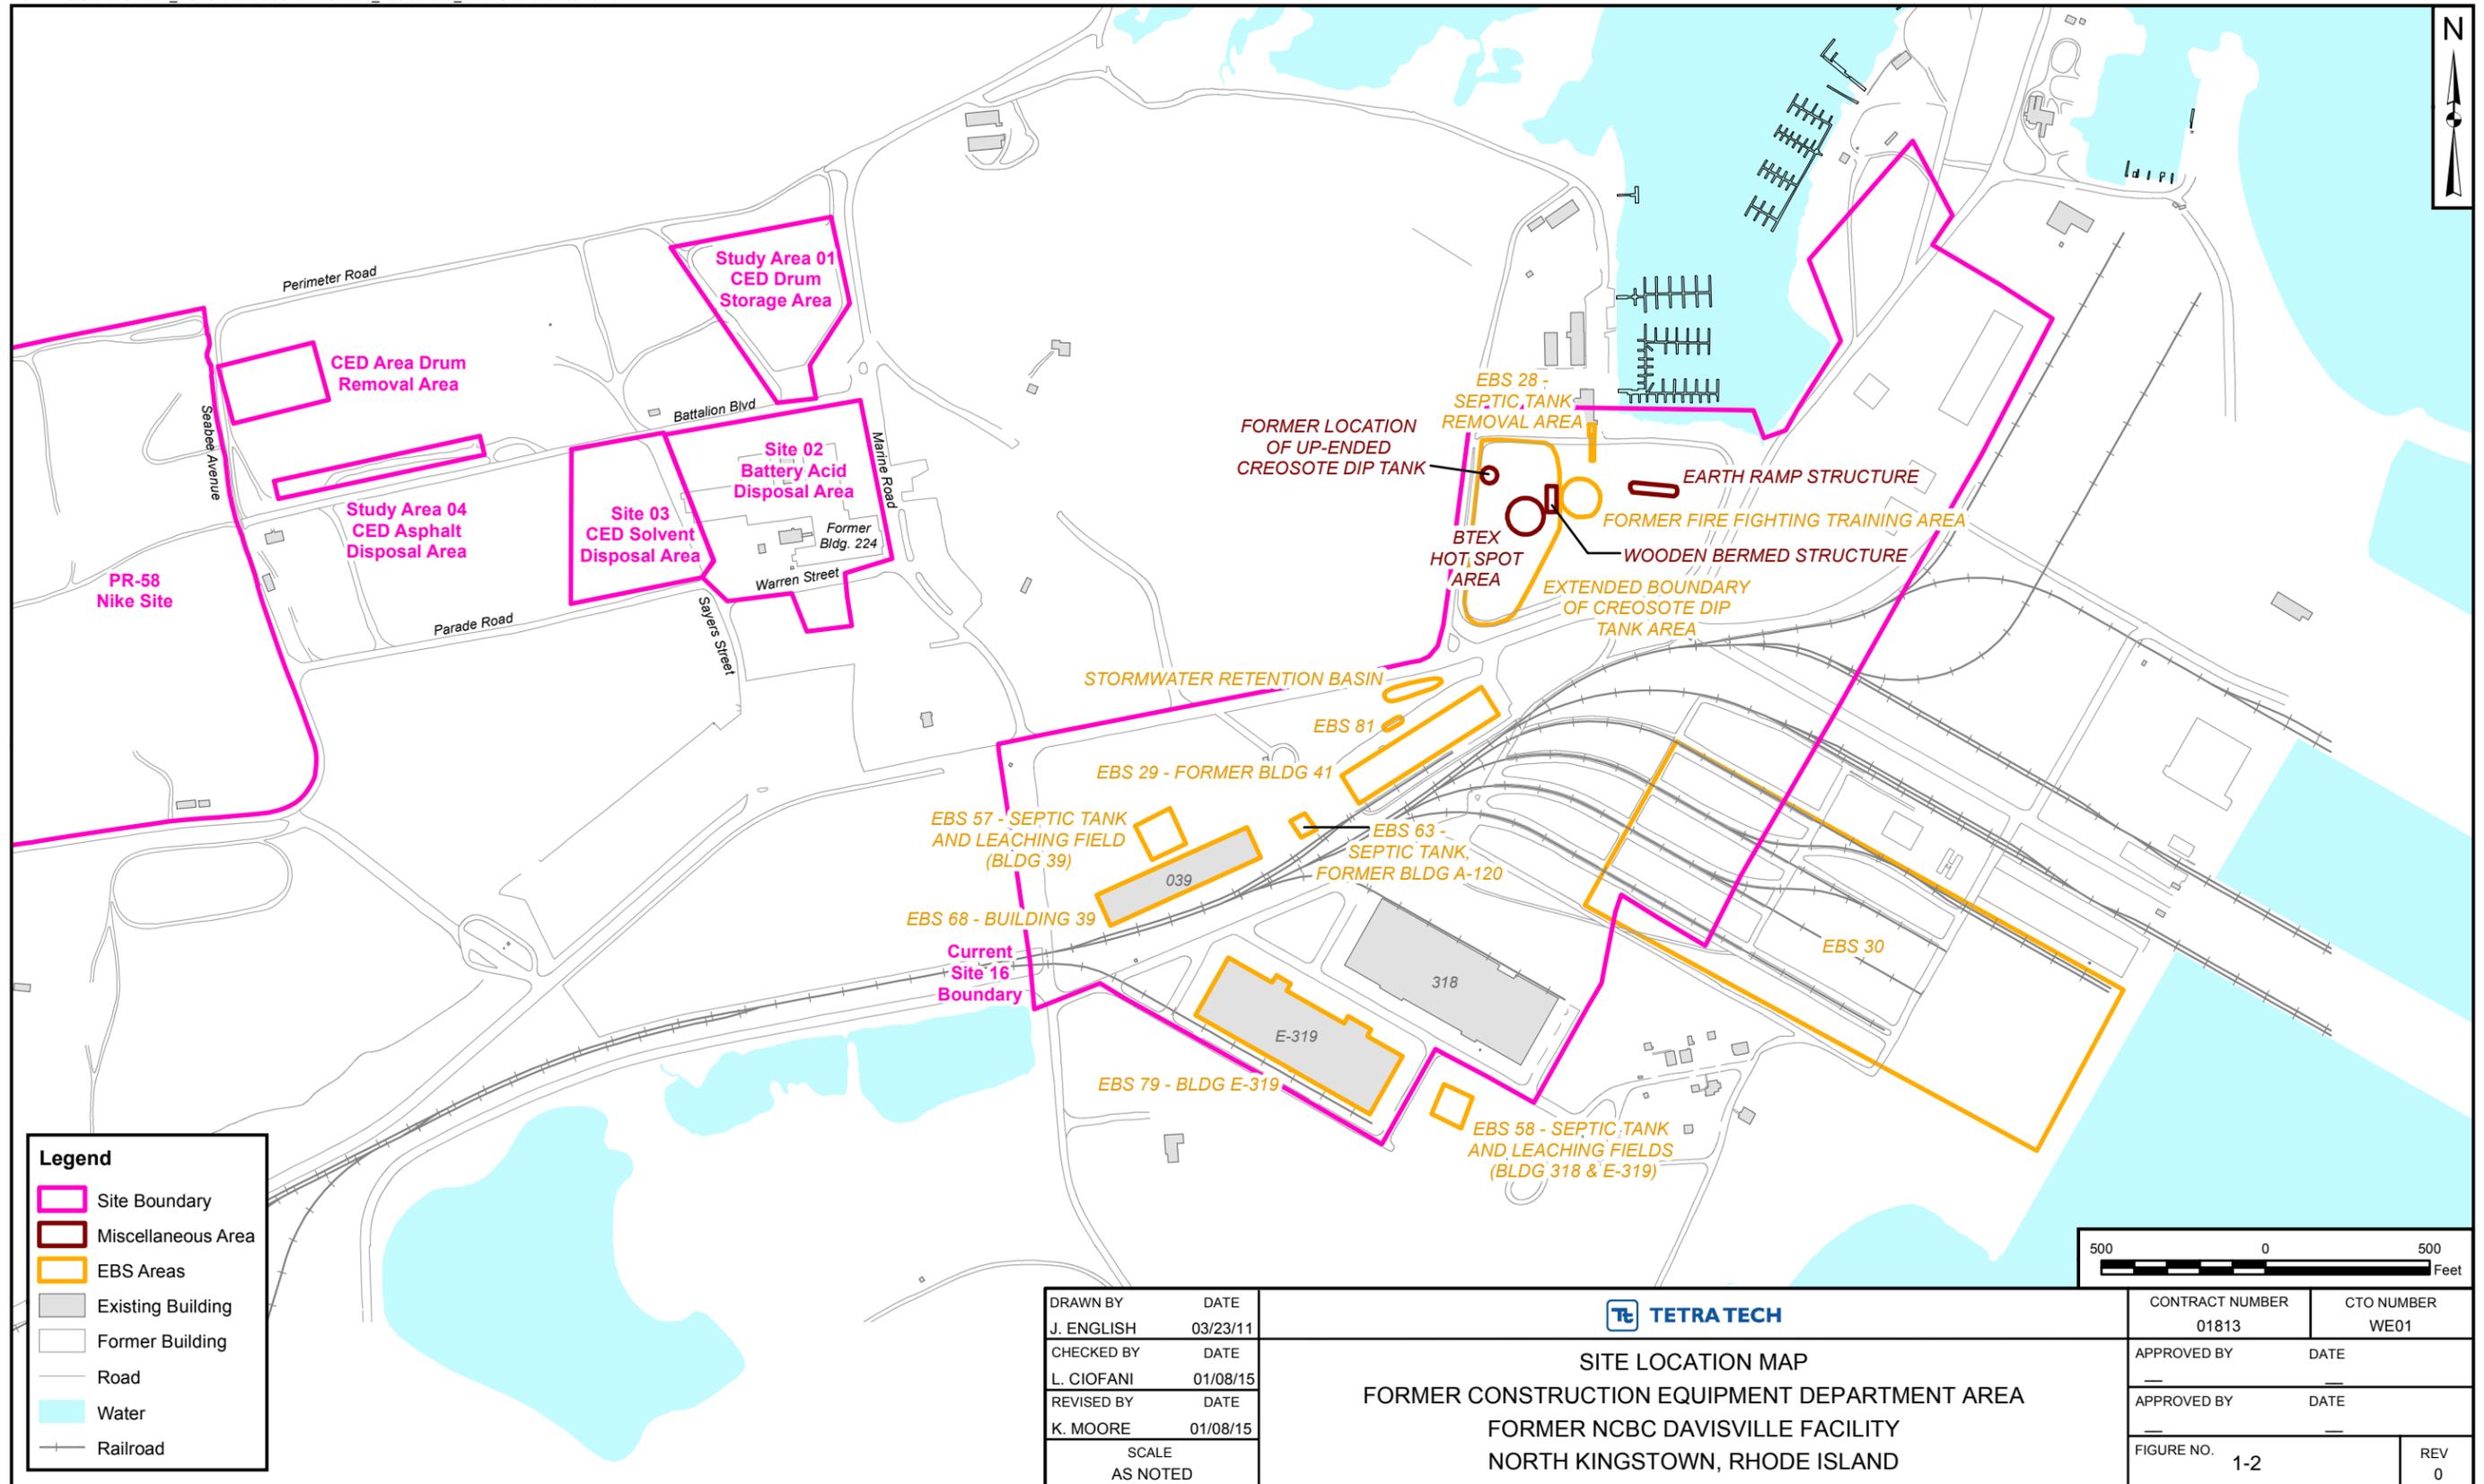

Significant observations reported by the field crew and noteworthy analytical results are summarized in each section. Conclusions and/or recommendations are provided based on the analytical results.

2.0 PROBLEM NO 1: DELINEATION OF TPH-CONTAMINATED SOILS AT SITE 03

The SAP provided the following background information and formal problem statement for Problem 1:

- **Background.** A Human Health Risk Assessment (HHRA) for Site 03 was conducted as part of a risk evaluation for the CED Area (Tetra Tech, 2014b). TPH was selected as a chemical of concern (COC) for direct contact with soil based on a comparison of concentrations to the Rhode Island Department of Environmental Management (RIDEM) residential and industrial/commercial soil criteria. TPH was also selected as a chemical of concern (COC) for groundwater protection based on a comparison of concentrations in soil at Site 03 to the RIDEM GA and GB leachability criterion. The available historical results indicate that TPH contamination is present in surface soil at Site 03. The source of TPH is expected to be historical contaminant disposal activities conducted at the site and/or potential releases from heavy equipment. The horizontal and vertical extent of contamination exceeding RIDEM criteria is currently unknown.
- **Problem Statement.** The extent of TPH contamination in soil at Site 03 of the CED Area is not sufficiently delineated to estimate volumes of soil that need to be evaluated for remedial alternatives under State of Rhode Island regulations. Therefore, additional data must be collected to refine the Navy's understanding of the nature and extent of TPH contamination at Site 03 and thus to understand the soil volumes potentially requiring remediation.

For soil sample location selection at Site 03 (Problem Statement 1), the SAP presented a grid (based on a 50-foot by 50-foot grid spacing) encompassing the areal extent of known TPH contamination. The SAP specified that soil borings would be advanced at selected grid nodes and at previous locations at which TPH concentrations exceeded RIDEM criteria, as shown on Figure 2-1. Therefore, both "biased samples" (i.e., samples from locations with previous TPH exceedances) and "grid samples" (i.e., samples collected from locations on the grid where no historical samples were collected) were proposed for collection to confirm historical sampling results and to delineate the horizontal and vertical extent of contamination.

A direct-push technology (DPT) rig was used to advance a shallow soil boring at each of the 35 locations depicted on Figure 2-1 (03SB001 through 03SB035). In addition, borings were advanced at two other locations, 03SB007A and 03SB009A, to compensate for the fact that the location markers (flags) originally placed by the Field Operations Leader (FOL) to identify grid sampling locations were accidentally dislodged/moved as a result of vehicular traffic (i.e., these additional borings were advanced to ensure that all locations specified in the SAP were actually sampled). Four soil samples were collected from each soil boring location, one surface soil [0 to 2 feet below ground surface (bgs)] and three subsurface soil (2 to 4, 4 to 6, and 6 to 10 feet bgs) samples. Samples from all depth intervals were

screened in the field using a photoionization detector (PID) (for the potential presence of volatile organic chemicals) and visually examined for the presence of staining or other indications of contamination. All samples were submitted to the subcontract analytical laboratory (Spectrum Analytical, Inc., North Kingstown, Rhode Island) for TPH–diesel-range organics (DRO) (C9-C40) and TPH–gasoline-range organics (GRO) [methyl tert-butyl ether (MTBE) through naphthalene] analysis.

The SAP stated that the analytical laboratory would analyze the top two depth intervals (0 to 2 and 2 to 4 feet bgs) from all boring locations for TPH-DRO (C9-C40) and TPH-GRO (MTBE through naphthalene) and submit the raw (unvalidated) data for the 0- to 2- and 2- to 4-foot depth intervals via e-mail to the Navy/Tetra Tech for review as soon as the raw data were available. Samples from the deeper depth intervals were to be placed on hold pending instructions from the Navy/Tetra Tech; however, the Navy/Tetra Tech decided, conservatively, to analyze all soil boring samples, including those from deeper depths (4 to 6 and 6 to 10 feet bgs), for the target TPH parameters because the TPH concentrations in 2 of 18 samples in the first group of samples received for review exceeded the RIDEM residential direct exposure criterion (DEC) for TPH.

The results of field observations and screening (i.e., PID readings) are documented on the boring logs included in Attachment B. The only positive PID reading was from the top of the 6- to 10-foot interval at 03SB014 [6.2 parts per million (ppm)]. However, there was no visual evidence of staining or olfactory evidence of contamination at this interval.

Table 2-1 presents TPH soil sample results, and Table 2-2 provides descriptive statistics (e.g., ranges of detections, frequencies of detection, mean concentrations) for the TPH data. The results of the data validation quality assurance review of the analytical results are presented in Attachment D and indicate that none of the data were qualified as rejected (not useable for risk management decision making). Figure 2-2 presents all TPH results (detects and non-detects) for all locations sampled during the 2014 sampling event, and Figure 2-3 shows TPH results for both 2014 and previous (1989 or 1993) samples with TPH concentrations exceeding either the RIDEM residential DEC/GA leachability criterion [500 milligrams per kilogram (mg/kg) for both criteria] or industrial DEC/GB leachability criterion (2,500 mg/kg for both criteria). Tables 2-1 and 2-2 and Figures 2-2 and 2-3 present results for total TPH as well as results for TPH-DRO (C9-C40) and TPH-GRO (MTBE through naphthalene). Total TPH results are the sum of detected TPH-DRO (C9-C40) and TPH-GRO (MTBE through naphthalene) results. For samples in which both TPH-DRO (C9-40) and TPH-GRO (MTBE through naphthalene) were non-detected, the detection limit for TPH-DRO (C9-C40) was used for total TPH.

As shown on Figure 2-2, only four 2014 TPH results exceed the residential DEC/GA leachability criterion; none of the 2014 TPH results exceed the RIDEM industrial DEC/GB leachability criterion. Concentrations exceeding the residential DEC/GA leachability criterion ranged from 530 mg/kg to 1,100 mg/kg. Most of

these exceedances were in surface soil (0 to 2 feet bgs) samples; however, the TPH result for the sample collected from 6 to 10 feet bgs at location 03SB014 (620 mg/kg) also exceeded the residential DEC/GA leachability criterion. As discussed above, this was the only sampling interval that had an elevated PID reading (6.2 ppm). The exceedances of the residential DEC were located in the eastern part of the sampling area. The extent of TPH contamination is addressed in the TPH Remediation Plan, which is included as an appendix to the Focused Feasibility Study (FFS).

In contrast, 11 historical TPH samples exceeded the RIDEM residential and/or industrial DEC (and GA and/or GB leachability criterion), and these exceedances were scattered across Site 03. The 2014 sampling event included resampling (as close as possible) of these locations. In most cases, the 2014 sampling results did not exceed the RIDEM criteria at locations where historical exceedances were noted. Exceptions included new sampling location 03SB022 and nearby historical location SS3C-1 and new sampling location 03SB009 and nearby historical location S-03-01-00-S. In the surface soil sample at 03SB022, TPH was detected at 1,100 and 740 mg/kg in the original and duplicate samples, respectively, and the TPH concentration in the surface soil sample at nearby location SS3C-1 was 3,110 mg/kg. The surface soil sample at 03SB009 had TPH at 530 mg/kg, and the surface soil sample at S-03-01-00-S had TPH at 550 mg/kg. According to the SAP (Tetra Tech, 2014a), there are no temporal bounds on the soil data; therefore, available historical data are included in Figure 2-3. However, because historical soil boring locations were resampled during the 2014 sampling event (Figure 2-3) and because the 2014 soil samples were analyzed per current analytical procedures (Tetra Tech, 2014a), it is recommended that risk management decisions be made based primarily on the 2014 data.

Detected concentrations are presented in bold font.

Concentrations exceeding the RIDEM Residential direct exposure criteria (DEC) are highlighted yellow.

No detected concentrations exceed the RIDEM Industrial DEC.

Footnotes:

1 - Rhode Island Department of Environmental Management (RIDEM), DEM-DSR-01-93, November 2011.

2 - Total TPH results are the sum of detected TPH-DRO (C9-C40) and TPH-GRO (MTBE through naphthalene) results.

3 - For samples in which both TPH-DRO (C9-40) and TPH-GRO (MTBE through naphthalene) were non-detected, the detection limit for TPH-DRO (C9-C40) was used for total TPH.

Definitions:

DRO = Diesel Range Organics

GRO = Gasoline Range Organics

MTBE = Methyl tert-butyl ether

NA = Not applicable/not available

TPH = Total Petroleum Hydrocarbons

Qualifiers:

J = Estimated value.

U = Non-detected value.

3.0 PROBLEM NO. 2: CHARACTERIZATION OF GROUNDWATER AT SITES 02/03 (IN SUPPORT OF THE EVALUATION OF LEACHING POTENTIAL)

The SAP provided the following background information and formal problem statement for Problem 2:

- **Background.** The HHRA for Site 02 soil, included as part of a risk evaluation for the CED Area (Tetra Tech, 2014b), evaluated exposures to surface and subsurface soil for potential receptors including construction workers, industrial workers, recreational users, and hypothetical future residents. No COCs were identified for direct contact based on soil data for Site 02; however, a qualitative evaluation for chemical migration from soil to groundwater was also conducted and concluded that naphthalene in subsurface soil was a potential COC for migration to groundwater.

As stated in Section 2, an HHRA for Site 03 was conducted as part of a risk evaluation for the CED Area (Tetra Tech, 2014b). In addition to being selected as a COC for direct contact with soil, TPH was selected as a potential COC for migration from soil to groundwater based on exceedances of RIDEM GA leachability (500 mg/kg) and GB leachability (2,500 mg/kg) criteria. The available historical results indicate that TPH contamination is present in surface soil at Site 03. The source of TPH is expected to be historical contaminant disposal activities conducted at the site and/or potential releases from heavy equipment. The horizontal and vertical extent of soil contamination exceeding RIDEM leachability criteria is currently unknown.

- **Problem Statement.** The Final Human Health Risk Evaluation for the Construction Equipment Department (Tetra Tech, 2014b) identified possible soil COCs for groundwater protection (TPH, naphthalene, and possibly select metals). Specifically, the report concluded that there is limited evidence of the potential for contaminant migration from soil to groundwater at the CED Area. Historical shallow groundwater data are available, and such data allow for an understanding of potential chemical migration from soil to groundwater, but the data are relatively old and incomplete for some possible COCs. Therefore, additional data must be collected from select upgradient and CED Area wells to better evaluate the potential for leachability of COCs from soil to groundwater.

Figure 3-1 presents the groundwater monitoring well sampling locations at the CED Area. The SAP provides the primary rationale for the selection of monitoring wells sampled to address Problem Statement No. 2. For example, for Site 02, wells downgradient of locations where naphthalene was previously detected in subsurface soil (MW02-04S and MW02-10S) were selected for sampling. Figure 3-2 shows detections of naphthalene in soil at Site 02. For Site 03, wells downgradient of Site 03 (MW03-04S and MW03-05S) were selected for sampling primarily because TPH soil contamination was detected at locations scattered across Site 03. Additional wells across Sites 02 and 03 (specified in the

SAP) were also recommended for sampling to obtain adequate spatial coverage of the sites and to provide data needed to address concerns regarding the potential for migration of metals from soil to groundwater. Regardless of the primary reason for sampling at a particular Site 02/03 well, samples from all of the selected wells were analyzed for the same target analyte list (presented below). However, as documented in the Base Realignment and Closure (BRAC) Clean-Up Team (BCT) notes for September 9, 2014, three wells specified in the SAP could not be located, 25-MW-01S, MW03-01S, and MW02-06S. Based on BCT discussions, MW01-12S was sampled as a substitute well for 25-MW-01S, and replacement wells were installed and sampled at locations MW03-01S, and MW02-06S. Newly installed shallow wells MW01-12S and MW03-01S were screened at 14 to 24 feet bgs, and MW02-06 was screened from 16 to 26 feet bgs. The selected screened intervals were determined in consultation with Navy and United States Environmental Protection Agency (USEPA) hydrogeologists.

The SAP also selected three wells (MW01-10S, MW01-13S, and MW01-14S) for sampling to provide data regarding CED Area-specific upgradient conditions, particularly for metals. These wells were selected as potentially unimpacted wells because they are located upgradient of and/or distal from the CED source areas and, based on historical data, contained very low-level volatile organic compound (VOC) and metals contamination. These wells were sampled for the same analyte list as the other CED Area wells (specified below).

Water quality parameters were measured and recorded in the field for all existing and newly installed wells sampled. These parameters included dissolved oxygen (DO), specific conductance, temperature, pH, oxidation-reduction potential (ORP), and turbidity. Water level measurements were collected from each well at the time of sample collection.

A total of 17 existing shallow wells at Sites 02/03 (including the two newly installed wells) were sampled. Fourteen of the shallow wells are associated with Sites 02 and 03 and were sampled to characterize groundwater at these sites and to support the FFS for CED Area soils. Three additional wells, upgradient of and/or distal from these sites, were sampled to provide CED Area-specific upgradient data. All groundwater samples from these wells were analyzed for Target Compound List (TCL) VOCs, naphthalene, Target Analyte List (TAL) metals (total and dissolved), and TPH-DRO (C9-C40) and TPH-GRO (MTBE through naphthalene).

The results of field observations and screening (i.e., PID readings) are documented on the boring and sampling logs included in Attachment B. The PID readings did not suggest the presence of benzene or other aromatic compounds in the soil borings for the newly installed wells. There was also no visual evidence of staining or olfactory evidence of contamination.

The analytical results for the groundwater samples collected in 2014 to address Problem No. 2 are presented on a well-by-well basis in Table 3-1, and descriptive statistics for all chemicals detected at least once are provided in Table 3-2. The following items summarize the results:

- No chlorinated VOCs (CVOCs) were detected in shallow groundwater at Sites 02/03. CVOCs have been detected historically in deeper groundwater zones. However, groundwater underlying the CED Area has been impacted by groundwater contamination migrating into the area from the upgradient Nike PR-58 site. CVOCs are the primary contaminants in the groundwater plume extending from the Nike PR-58 site. An interpretation of the analytical data (Tetra Tech, 2015) concluded that any residual CVOC contamination present at Sites 02/03 is not contributing significantly to the CVOCs detected in deep groundwater at these Sites.
- No chemical concentrations in shallow groundwater samples exceeded available Safe Drinking Water Act (SDWA) Maximum Contaminant Levels (MCLs) or RIDEM groundwater objectives.
- As depicted on Figure 3-3, chemical concentrations reported for one shallow well (MW02-10S) exceeded USEPA Regional Screening Levels (RSLs) for tapwater. The naphthalene concentration exceeded the USEPA cancer-based RSL, and the dissolved manganese concentration exceeded the USEPA non-cancer-based RSL based on an HI of 1.
 - MW02-10S, downgradient of a subsurface soil sample location with a naphthalene detection, was the only well with a naphthalene detection (see Figure 3-2). The concentration detected (2.8 µg/L) is less than the concentration reported for the sample collected in 2007 from MW02-10S (32.4 µg/L).
 - VOCs were detected in samples from MW02-10S in 2007, and several VOCs were detected in MW02-10S during the 2014 sampling event (e.g., cyclohexane); however, benzene, toluene, ethylbenzene, and xylenes (BTEX), typically found in petroleum products and detected in samples collected historically from this well, were not. A review of current and historical data suggests that fuel-related contaminants detected at this location are attenuating over time.
 - Although the dissolved manganese concentration exceeded the RSL, the total manganese concentration was less than the RSL.
- TPH-DRO (C9-C40) and TPH-GRO (MTBE through naphthalene) were only detected in samples from MW02-10S. TPH-DRO (C9-C40) concentrations were 0.64 to 0.68 mg/L, and TPH-GRO (MTBE through naphthalene) concentrations were 1.3 to 1.4 mg/L for the original and duplicate sample collected at MW02-10S. The presence of TPH-DRO (C9-C40) and TPH-GRO (MTBE through

naphthalene) suggests the well may have been impacted by a petroleum-related source of contamination.

- The maximum total and dissolved cobalt concentrations exceed the USEPA non-cancer-based RSL based on a HI of 0.1 but not the RSL based on an HI of 1. Similarly, the maximum dissolved concentrations reported for cadmium and iron exceed the USEPA RSL based on a HI of 0.1 but not the RSL based on a HI of 1.
- Although few concentrations detected in Site 02/03 wells exceed USEPA or RIDEM screening criteria (see Table 3-2), the concentrations from Sites 02/03 wells generally do exceed those reported the three upgradient wells (MW01-10S, MW01-13S, and MW01-14S). Only metals were detected in the upgradient wells.
- A synoptic round of water levels was collected across the CED Area and CED Area Drum Removal Area on October 15, 2014. Groundwater data from the synoptic water level event were used to construct potentiometric maps for the shallow and deep overburden and bedrock zones. Figures 3-4 to 3-6 present the October 2014 data for the shallow and deep overburden and bedrock zones. Based on these figures, groundwater flow between the CED Drum Removal Area (MW03-15 through MW03-17) and CED Area is approximately southeast for both the shallow and deep groundwater monitoring zones. This overall flow pathway is consistent with previous synoptic events that present the results of more comprehensive site-wide evaluations (conducted in 2007 and 2009). Further, analysis of CED Drum Removal Area wells shows that at a minimum, there is also a northeasterly component of groundwater flow between MW03-16 to MW03-15.

In overview, the groundwater data for the Sites 02/03 wells sampled in 2014 do not suggest significant chemical migration from soils to groundwater. However, naphthalene present in Site 02 soil may be contributing to the naphthalene concentration detected in groundwater at MW02-10S (see Figure 3-2). Chemical concentrations detected in samples collected from MW02-10S suggest the presence of potential (albeit low) fuel-related contamination.

SUMMARY OF HHRA

An HHRA was conducted for the CED Area Sites 02/03 to evaluate potential risks and hazards for exposures to shallow-zone groundwater (see Attachment A-1). The groundwater samples collected in September/October 2014 were used in the HHRA and were compared to conservative screening levels for direct contact exposures. Vapor intrusion exposures for groundwater were evaluated separately (see Attachment A-2). Additionally, groundwater data from the most recent sampling round were used to update the qualitative evaluation for migration from soil to groundwater originally presented in the 2014

risk evaluation (Tetra Tech, 2014b). Screening criteria for trivalent chromium were used to evaluate total chromium data in the HHRA because historical site activities for the CED Area do not suggest that hexavalent chromium would be a significant contaminant at any sites in the investigation area.

The chemicals of potential concern (COPCs) for Sites 02/03 selected based on comparisons to USEPA RSLs for tap water (USEPA, 2015), DWA MCLs (USEPA, 2012), and RIDEM GA and GB Groundwater Objectives (RIDEM, 2011) include naphthalene, cobalt, and manganese for direct contact with shallow groundwater.

Receptors evaluated in the HHRA were current and future construction workers and hypothetical residents (child, adult, and lifelong). Future industrial workers and future recreational users are potential receptors at the CED Area but are not expected to have direct contact exposure to groundwater. The receptors were evaluated for exposure to groundwater via incidental ingestion, dermal contact, and inhalation of volatiles. Residential exposures were evaluated using current USEPA RSLs (2015), and construction worker exposures were evaluated using risk-based concentrations (RBCs) representing 1×10^{-6} cancer risk levels and hazard quotients (HQs) of 1 (i.e., no-adverse-effect concentrations) developed using applicable site-specific exposure assumptions and methodology similar to that used by USEPA to develop the RSLs.

Summary of Cancer and Non-Cancer Risk Estimates and Risk Contributors⁽¹⁾ for Receptor Direct Contact with Groundwater

Data Set Evaluated	Receptor	Risk Estimates ⁽²⁾⁽³⁾	
		Cancer Risk Estimate	Hazard Index
Shallow Groundwater	Construction Worker	5×10^{-10}	0.02
	Hypothetical Resident	<i>2×10^{-5}</i> (naphthalene)	0.6

- 1 A non-carcinogenic risk contributor is a chemical that contributes substantially (i.e., greater than an HQ of 0.1) to a target organ-specific hazard index (HI) that exceeds 1. A carcinogenic risk contributor is a chemical with a calculated cancer risk estimate exceeding 1×10^{-6} when the medium-specific total cancer risk for the receptor exceeds 1×10^{-5} .
- 2 Italicized carcinogenic risk estimates exceed the State of Rhode Island cancer risk limit of 1×10^{-5} . A chemical name presented in parentheses indicates the primary chemical driving risk.
- 3 The cancer risk and HI presented for the hypothetical resident are for the lifelong resident and child resident (i.e., the most conservative receptors), respectively.

As shown in the summary table, all HIs for groundwater are less than the target level of 1. Therefore, no adverse non-carcinogenic effects are expected for exposures to subsurface soil or shallow groundwater based on medium-specific HIs.

Cancer risk estimates for all groundwater evaluations are less than the USEPA's target cancer risk range of 1×10^{-6} to 1×10^{-4} . The cancer risk estimate for hypothetical residents exceeds and the State of Rhode Island cancer risk benchmark of 1×10^{-5} due to naphthalene. Uncertainty associated with the exposure point concentration (EPC) for naphthalene is discussed below.

Conclusions regarding possible COCs for migration to groundwater identified during the 2014 risk evaluation (Tetra Tech, 2014b) were re-evaluated using groundwater data from the most recent sampling event (September/October 2014). Based on the qualitative evaluation, residual soil chemical concentrations do not appear to be negatively impacting groundwater quality at Sites 02/03.

The following sources of uncertainty should be considered when interpreting the results of the HHRA for Sites 02/03:

- Maximum concentrations were used as EPCs for naphthalene and cobalt in groundwater instead of 95-percent upper confidence limits (UCLs) because of the small number of detections (i.e., only one detection of naphthalene and two detections of cobalt for the shallow groundwater data set). Using maximum concentrations for EPCs is conservative and likely results in an overestimation of risk. Naphthalene was the sole contributor to cancer risks exceeding the State of Rhode Island cancer risk benchmark; therefore, considerable uncertainty is associated with the EPC for naphthalene. Naphthalene was detected in only 1 of 14 groundwater samples.
- Although the future land use of the sites/study areas is anticipated to be industrial/commercial or recreational, the residential land use scenario was evaluated in this HHRA primarily to support risk-management decisions.
- Cobalt was selected as a COPC in groundwater based on an exceedance of the USEPA RSL based on an HQ of 0.1. Uncertainty is associated with selecting cobalt as a COPC because cobalt is a naturally occurring metal and because the conservative screening levels (based on USEPA criteria) are likely to be less than background levels of cobalt expected at some sites. For example, the Maryland Department of the Environment (MDE) selected revised criteria for cobalt of 50 mg/kg for soil and 100 µg/L for groundwater based on Agency for Toxic Substances and Disease Registry (ATSDR) toxicity values (MDE, 2013). The MDE value for cobalt in groundwater is considerably greater than the current USEPA cobalt RSL for tap water (6 µg/L based on an HQ of 1). Cobalt would not have been selected as a COPC for groundwater at Sites 02/03 if the MDE value for cobalt was used for COPC selection instead of the USEPA RSL.

Naphthalene was identified as a risk driver for hypothetical resident exposure to groundwater based on the HHRA. However, unacceptable Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) risks were not predicted for receptor exposure to groundwater, and naphthalene was only detected in 1 of 14 groundwater samples. Also, the maximum concentration was used as the EPC, which likely overestimates risks. Additionally, naphthalene was detected at well MW02-10S, where historical concentrations of fuel-related contaminants were greater than current concentrations, indicating that contaminant concentrations may be attenuating over time. Therefore, naphthalene is not selected as a COC for groundwater at Sites 02/03. However, future monitoring is recommended to ensure that concentrations continue to attenuate over time.

Detected concentrations are presented in bold font. Concentrations exceeding the lower of USEPA RSLs and RIDEM residential criteria are shaded yellow. Concentrations exceeding MCLs are presented in bold red font and shaded yellow.

Footnotes:

- 1 - Rhode Island Department of Environmental Management (RIDEM), DEM-DSR-01-93, November 2011.
- 2 - USEPA Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites, January 2015.
RSLs are based on a lifetime cancer risk of 1E-06 or a noncancer hazard quotient (HQ) of 1.
- 3 - Federal Maximum Contaminant Levels (MCLs), 2012 Edition of the Drinking Water Standards and Health Advisories. Office of Water, Washington, D.C. EPA 822-S-12-001. April.
- 4 - The screening value is for trivalent chromium.

Definitions:

DRO = Diesel Range Organics
GRO = Gasoline Range Organics
MTBE = Methyl tert-butyl ether
NA = Not applicable/not available
TPH = Total Petroleum Hydrocarbons

Qualifiers:

J = Estimated value.
U = Non-detected value.
UJ = Non-detected result is estimated.

4.0 PROBLEM NO. 3: CHARACTERIZATION OF VAPOR INTRUSION POTENTIAL AT SITES 02/03

The SAP provided the following background information and formal problem statement for Problem No. 3:

- **Background.** Because a VOC groundwater plume underlies soil at the CED Area, it is necessary to understand if the FFS for the CED Area soils needs to address vapor intrusion. VOC contamination in groundwater, if present, could potentially migrate from groundwater through soil and into the indoor air of a building hypothetically constructed atop Sites 02/03.
- **Problem Statement.** The Navy is preparing an FFS for the CED Area soils. A VOC groundwater plume emanating primarily from an upgradient United States Army Corps of Engineers (USACE) source area underlies soil at the CED Area (Tetra Tech, 2015). The FFS is for CED Area soils and does require an understanding of the potential for vapor intrusion (i.e., whether VOCs can migrate from the groundwater plume to the indoor air of a future building constructed atop the CED Area). Land use controls may be necessary to mitigate the potential for vapor intrusion. Historical VOC data are available for the shallow groundwater zone, but most of the available data are dated. A current round of VOC data for this zone would allow a comprehensive understanding of the potential for vapor intrusion and would support the FFS. Therefore, data must be collected from select CED Area shallow-zone wells to support an evaluation of the potential for vapor intrusion.

The SAP provides the primary rationale for the selection of shallow monitoring wells sampled to address Problem Statement No. 3. For example, VOC contamination was detected at MW02-10S (Site 02) in samples collected in 2007. 25MW-01S (Site 02) was also selected for sampling primarily because of historical VOC contamination. However, well 25MW-01S was not found during the 2014 sampling event and was replaced with well MW01-12S (located and redeveloped), as agreed to during the September 9, 2014, BCT teleconference. Additional wells across Sites 02 and 03 (as specified in the SAP) were also recommended for sampling to obtain adequate spatial coverage of the sites and to provide data needed to address remaining concerns regarding the potential for migration of metals from soil to groundwater. Two wells (MW03-01S and MW02-06) selected for sampling in the SAP were not located during the 2014 sampling event, and replacement wells were installed as discussed in Section 3. Regardless of the primary reason for sampling at a particular Site 02/03 well, VOC samples were collected from 17 shallow wells (as described in Section 2) during the 2014 sampling event. Water quality parameters were also measured and recorded in the field for all existing and newly installed wells sampled. These parameters included DO, specific conductance, temperature, pH, ORP, and turbidity. Water level measurements were collected from each well at the time of sample collection.

The VOC results for the 2014 groundwater samples collected from Sites 02/03 to address Problem No. 3 are presented on a well-by-well basis in Table 4-1. The following items summarize the results:

- No VOCs were detected in the upgradient wells. Trichlorofluoromethane at MW02-03S and cyclohexane, isopropyl benzene, and methyl cyclohexane at MW02-10S were the only VOCs detected in Site 02/03 shallow wells.
- The maximum detected VOC concentrations in Sites 02/03 shallow groundwater did not exceed vapor intrusion criteria derived using the USEPA Vapor Intrusion Screening Level (VISL) calculator (as described in Attachment A-2) to identify chemical concentrations in groundwater that may adversely affect the indoor air quality of a building overlying subsurface VOC contamination.
- VOC concentrations have declined over time. Sites 02/03 groundwater samples from 1995 and 2007 had sporadic detections of several VOCs, including CVOCs. During the 2014 sampling event, VOCs were only detected in two wells at Sites 02/03, and CVOCs were not detected in any of the wells sampled.
- Although VOC concentrations in the intermediate and deeper groundwater underlying Sites 02/03 exceed vapor intrusion criteria developed using the VISL calculator, as noted previously, groundwater in these zones underlying the CED Area has been impacted by groundwater contamination migrating into the area from the upgradient Nike PR-58 site.

SUMMARY OF HHRA

Risk estimates associated with vapor intrusion into hypothetical future buildings within the study area were developed for VOC concentrations detected in 2014 from shallow-depth groundwater wells at Sites 02/03 as well as shallow- and intermediate-depth groundwater wells at the Drum Removal Area (Attachment A-2). However, VOC results for the intermediate-depth wells do not represent water-table concentrations, the most appropriate concentrations to evaluate in a vapor intrusion analysis. Only the results of the vapor intrusion analysis for Sites 02/03 shallow groundwater are discussed in this section. The results of the vapor intrusion analysis for the Drum Removal Area are discussed in Section 5.

Four VOCs, one semivolatile organic compound (SVOC) (naphthalene), metals, and petroleum hydrocarbons were detected in the Sites 02/03 groundwater samples. Detected concentrations VOCs detected in Sites 02/03 shallow groundwater were compared to screening criteria for vapor intrusion based on an HI of 0.1 or an incremental lifetime cancer risk (ILCR) of 1×10^{-6} . No detected concentrations in Sites 02/03 groundwater exceeded the conservative vapor intrusion screening levels. Therefore, no chemicals

were selected as vapor intrusion COPCs for the CED Area shallow groundwater data set; further vapor intrusion risk evaluation of this data set was not conducted.

Detected concentrations are presented in bold font. Concentrations exceeding the USEPA VISL are shaded yellow.

Footnotes:

1 - Calculated using USEPA's Vapor Intrusion Screening Level (VISL) calculator Version 3.3, May 2014 RSLs. Values correspond to a target cancer risk level of 1E-06 for carcinogens (C) or hazard quotient (HQ) of 1 for noncarcinogens (N) and an attenuation factor of 0.001.

Definitions:

DRO = Diesel Range Organics
 GRO = Gasoline Range Organics
 MTBE = Methyl tert-butyl ether
 NA = Not applicable/not available
 TPH = Total Petroleum Hydrocarbons

Qualifiers:

J = Estimated value.
 U = Non-detected value.
 UJ = Non-detected result is estimated.

5.0 PROBLEM NO. 4: CHARACTERIZATION OF GROUNDWATER AT CED AREA DRUM REMOVAL AREA

The SAP provided the following background information and formal problem statement for Problem No 4:

- **Background.** In October 2013, the Navy removed nine drums from the CED Area Drum Removal Area and soil samples were collected from beneath the drums as part of the Time-Critical Removal Action. The soil results from the Time-Critical Removal Action show few exceedances of applicable screening criteria. The depths of the collected soil samples were greater than 4 feet bgs (below the drums). A risk assessment was completed based on these soils results and is presented in Attachment A-3 of this technical memorandum. No COCs were identified for Drum Removal Area soil.
- **Problem Statement.** As noted above, the Navy performed a Time-Critical Removal Action at the CED Area Drum Removal Area in October 2013. Soil samples were collected during the removal action for a wide range of target analytes, and a risk assessment for the soil data was conducted. Groundwater data were not collected during the removal action. The removal action included the installation of monitoring wells, but not sampling and analysis of these wells. Groundwater data must be collected from the monitoring wells to determine whether groundwater has been impacted by potential releases from drums.

The SAP identified six monitoring wells at the CED Drum Removal Area that were installed and sampled in 2014 to characterize water quality at and downgradient of the area where drums were excavated. Monitoring wells MW03-17S and MW03-17I are located in the immediate vicinity of the drum excavation area, and MW03-16S and MW03-16I are located downgradient of the excavation area, as shown on Figure 3-2. Monitoring wells MW03-15S and MW03-15I are likely installed sidegradient of the drum excavation area, although it is possible given the presence of wetland features to the north of the site that these wells could be temporally downgradient of the excavation area (especially MW03-15S). The following table briefly summarizes the rationale for the screen depth interval selected for each well installed in the Drum Removal Area in 2014.

CED Drum Removal Area Well	Screened Interval (feet bgs)	Rationale for Screened Interval
MW03-15S	13 to 23	Characterize shallow groundwater/water table zone. Evaluate potential shallow migration to north.
MW03-15I	45 to 55	Characterize intermediate groundwater zone. Evaluate potential migration from shallow zones to deeper zones. Evaluate potential intermediate migration to north and/or migration from shallow zone.
MW03-16S	11.5 to 21.5	Characterize shallow groundwater/water table zone and potential migration downgradient of excavation area.
MW03-16I	45 to 55	Characterize intermediate groundwater zone. Evaluate potential migration from shallow zones to deeper zones and potential migration downgradient of excavation area.
MW03-17S	11.5 to 21.5	Characterize shallow groundwater/water table zone in excavation area (potential source area).
MW03-17I	45 to 55	Characterize intermediate groundwater zone. Evaluate potential migration from shallow zones to deeper zones in excavation area (potential source area)

All groundwater samples from these wells were analyzed for TCL VOCs, TCL semivolatile organic compounds (SVOCs), TCL pesticides/polychlorinated biphenyls (PCBs), TAL metals (total and dissolved), TPH-DRO (C9-C40), and TPH-GRO (MTBE through naphthalene).

Analytical results for soil samples at the CED Area Drum Removal Area are compared to direct contact criteria and leachability criteria in Tables 5-1 and 5-2, respectively, on a sample-by-sample basis. Table 5-3 provides descriptive statistics (e.g., ranges of detections, frequencies of detection, mean concentrations) for the soil data. The following items summarize the results:

- Three VOCs, four SVOCs, Aroclor-1260, TPH-DRO (C9-C40), cyanide, and metals were detected in the removal action soil samples. However, only arsenic was detected at concentrations exceeding the USEPA RSL for residential soils. No target analytes were detected at concentrations exceeding RIDEM DEC. (The RIDEM DEC for arsenic represents the statistical 95-percent UCL of natural background data across the State of Rhode Island.)
- Two VOCs (cis-1,2-dichloroethene and trichloroethene), Aroclor-1260, and several metals exceed USEPA leachability criteria. However, no target analytes were detected at concentrations exceeding the available RIDEM GA leachability criteria. Additionally, as discussed below, shallow groundwater data collected from wells installed at the Drum Removal Area suggest that the residual soil contamination has had a limited impact on the underlying shallow groundwater quality. Of the chemicals detected at concentrations exceeding USEPA leachability criteria, only trichloroethene and cobalt concentrations exceeded direct contract criteria published by USEPA or RIDEM. Although

these chemicals were among those selected as COPCs for groundwater samples collected from removal action wells, neither was selected as a COC for shallow groundwater (see Attachment A-3).

- The HHRA conducted based on the removal action soils data set is included in Attachment A-3 and briefly summarized below; no COCs were identified.

The analytical results for the groundwater samples collected to address Problem No. 4 are presented on a well-by-well basis in Tables 5-4 and 5-5; descriptive statistics for any chemical detected at least once are provided in Table 5-6. Analytical results exceeding USEPA or RIDEM direct contact criteria were previously depicted on Figure 3-2. The following items summarize the results:

- Six CVOCs and several metals were detected in samples collected from removal action wells. TPH was not detected in any removal action wells.
- Cobalt was the only metal detected at concentrations exceeding USEPA RSLs for tap water. However, cobalt results for intermediate-depth wells were generally greater than those reported for shallow-depth wells, suggesting that residual soil contamination is not the source of the concentrations detected.
- No CVOCs were detected in shallow groundwater at concentrations exceeding SDWA MCLs or RIDEM GA groundwater objectives. Trichloroethene concentrations in samples from MW03-15S and MW03-16S did exceed the USEPA RSL for tap water. No other CVOCs were detected in shallow-zone wells.
- Trichloroethene was the only CVOC detected in shallow groundwater (MW03-17S only) at concentrations exceeding the vapor intrusion criteria presented in Table 5-5. MW03-17S is located in the immediate vicinity of the excavation area.
- The most significant CVOC contamination was detected in samples from MW03-16I, an intermediate-depth well located downgradient of the excavation area. Four CVOCs, including trichloroethene at 170 µg/L, were detected at concentrations exceeding SDWA MCL and/or RIDEM GA groundwater objectives. In contrast, the trichloroethene concentration detected in the sample from the shallow well at this location was 1.6 µg/L. The trichloroethene concentration at MW03-17I exceeded the USEPA RSL for tap water but not the SDWA MCL or RIDEM GA groundwater objective. CVOCs were not detected in the sample from MW03-15I.

- In the intermediate wells, several CVOCs were detected in the sample from MW03-16I at concentrations exceeding the vapor intrusion screening criteria presented in Table 5-5 (Figure 5-1). However, only trichloroethene was detected in the sample from MW03-17I at a concentration exceeding the vapor intrusion screening criterion. No chemicals were detected at concentrations exceeding vapor intrusion screening levels in MW03-15I.

As discussed in Section 3, a synoptic round of water levels was collected across the CED Area and CED Area Drum Removal Area on October 15, 2014. Figures 3-4 to 3-6 present the October 2014 data for the shallow and deep overburden and bedrock zones, respectively. Based on these figures, groundwater flow between the CED Drum Removal Area (MW03-15 through MW03-17) and CED Area is approximately southeast for both the shallow and deep groundwater monitoring zones. Further, analysis of the CED Drum Removal Area wells shows that at a minimum, there is also a northeasterly component of groundwater flow between MW03-16 to MW03-15.

SUMMARY OF HHRA

The HHRA for the CED Area Drum Removal Area (Attachment A-3) evaluated potential risks and hazards for exposures to subsurface soil, shallow-zone groundwater, and intermediate-zone groundwater. Subsurface soil samples collected in October 2013 and groundwater samples collected in September/October 2014 were used in the HHRA, and results from these samples were compared to conservative screening levels for direct contact exposures, and for soil, results were also compared to risk-based screening levels for migration to groundwater. Screening criteria for trivalent chromium were used to evaluate total chromium data in the HHRA because historical site activities for the CED Area do not suggest that hexavalent chromium would be a significant contaminant at any sites in the investigation area. Vapor intrusion exposures for Drum Removal Area groundwater were evaluated separately (see Attachment A-2) and are also discussed in this section.

Direct Contact

Based on comparisons to screening criteria, COPCs were identified for the following direct contact exposure scenarios:

- Direct contact with subsurface soil – aluminum, cobalt, iron, and manganese.
- Direct contact with shallow groundwater – trichloroethene, cobalt, and manganese.
- Direct contact with intermediate groundwater – 1,1,2,2-tetrachloroethane, 1,1,2-trichloroethane, cis-1,2-dichloroethene, trichloroethene, vinyl chloride, cobalt, iron, and manganese.

The maximum detected arsenic concentration in soil exceeds the screening level based on RSLs, but all arsenic concentrations were less than the RIDEM Method 1 DEC for arsenic of 7.0 mg/kg, which is based on the 95-percent UCL of natural background across the state (RIDEM, 2011). Consequently, arsenic was not selected as a COPC for soil.

Receptors evaluated in the HHRA were current and future construction workers, future industrial workers, future recreational users (child, adult, and lifelong) and hypothetical future residents (child, adult, and lifelong). All receptors were evaluated for exposures to soil via incidental ingestion, dermal contact, and inhalation of fugitive dust. Industrial worker and residential exposures were evaluated using current USEPA RSLs (2015). Construction worker and recreational exposures were evaluated using RBCs representing 1×10^{-6} cancer risk levels and HQs of 1 (i.e., no-adverse-effect concentrations) developed using applicable site-specific exposure assumptions and methodology similar to that used by USEPA to develop the RSLs. Risk estimates are summarized in the table below.

Summary of Cancer and Non-Cancer Risk Estimates and Risk Contributors⁽¹⁾ for Receptor Direct Contact with Subsurface Soil or Groundwater

Data Set Evaluated	Receptor	Risk Estimates ⁽²⁾⁽³⁾	
		Cancer Risk Estimate	Hazard Index
Subsurface Soil	Construction Worker	$2 \times 10^{-7} / 9 \times 10^{-8}$	0.7 / 0.7
	Industrial Worker	$9 \times 10^{-7} / 4 \times 10^{-9}$	0.06 / 0.06
	Recreational User ⁽⁴⁾	$7 \times 10^{-7} / 1 \times 10^{-10}$	0.1 / 0.1
	Hypothetical Resident ⁽⁴⁾	$4 \times 10^{-6} / 2 \times 10^{-8}$	1 / 0.9
Shallow Groundwater	Construction Worker	7×10^{-7}	0.4
	Hypothetical Resident ⁽⁴⁾	8×10^{-6}	3⁽⁵⁾
Intermediate Groundwater	Hypothetical Resident ⁽⁴⁾	1×10^{-3} (1,1,2,2-PCA, 1,1,2-TCA, TCE, VC)	82 (1,1,2-TCA, cis-1,2-DCE, TCE, Co)

- 1 A non-carcinogenic risk contributor is a chemical that contributes substantially (i.e., greater than an HQ of 0.1) to a target organ-specific HI that exceeds 1. A carcinogenic risk contributor is a chemical with a calculated cancer risk estimate exceeding 1×10^{-6} when the medium-specific total cancer risk for the receptor exceeds 1×10^{-5} .
- 2 Bolded carcinogenic risk estimates exceed USEPA's target cancer risk range of 1×10^{-6} to 1×10^{-4} as well as the State of Rhode Island cancer risk limit of 1×10^{-5} . Bolded HIs exceed the target level of 1. Chemical names presented in parentheses indicate the primary chemicals driving risk.
- 3 Cancer risks and HIs are presented two ways: (1) with arsenic (for information purposes only), (2) without arsenic. As noted above, arsenic was not selected as a COPC. See Appendix C for risk estimates including arsenic.

4 The cancer risk and HI presented for the recreational user are for the lifelong recreational user and child recreational user (i.e., the most conservative recreational user receptors), respectively. The cancer risk and HI presented for the hypothetical future resident are for the lifelong resident and child resident (i.e., the most conservative receptors), respectively.

5 Target organ HIs are equal to 1.

Definitions: 1,1,2,2-PCA = 1,1,2,2-Tetrachloroethane; 1,1,2-TCA = 1,1,2-Trichloroethane; cis-1,2-DCE = cis-1,2-Dichloroethene; TCE = Trichloroethene; VC = Vinyl Chloride; Co = Cobalt

The following sources of uncertainty should be considered when interpreting the results of the risk evaluations:

- Maximum concentrations were used as EPCs for groundwater exposures estimated in the HHRA instead of 95-percent UCLs because of the small number of samples available. Using maximum concentrations for EPCs is conservative and likely results in an overestimation of risk.
- Intermediate groundwater data from the Drum Removal Area were evaluated for purposes of completeness. However, the intermediate groundwater data may be more representative of off-site sources of contamination because a VOC plume emanating primarily from an upgradient USACE source area underlies soil at the CED Area.
- Although the future use of the CED Area is anticipated to be industrial/commercial or recreational, the residential land use scenario was evaluated in this HHRA primarily to aid in risk-management decisions.
- Cobalt was selected as a COPC in soil and both groundwater data sets based on exceedances of USEPA RSLs. Uncertainty is associated with selecting cobalt as a COPC because cobalt is a naturally occurring metal and because the conservative screening levels (based on USEPA criteria) are likely to be less than background levels of cobalt expected at some sites. Cobalt would not have been selected as a COPC for soil or groundwater at the Drum Removal Area if the MDE values for cobalt (MDE, 2013) were used for COPC selection instead of the USEPA RSLs. Additionally, cobalt concentrations in intermediate groundwater exceed those in shallow groundwater. Cobalt was not selected as a risk driver based on concentrations detected in shallow groundwater, and shallow groundwater concentrations are likely more representative of site-related contamination.

- Risk drivers for direct contact exposures are presented below.

Environmental Medium	Receptors Evaluated	Risk Drivers
Subsurface Soil	Construction Worker Industrial Worker Recreational User Hypothetical Resident	None
Shallow Groundwater	Construction Worker Hypothetical Resident	None
Intermediate Groundwater ⁽¹⁾	Hypothetical Resident	1,2,2-tetrachloroethane 1,1,2-trichloroethane cis-1,2-dichloroethene trichloroethene vinyl chloride cobalt ⁽²⁾

- 1 Intermediate groundwater samples (collected 50 feet bgs) may be more representative of off-site contamination sources than site-related contamination.
- 2 Cobalt would not be identified as a COPC or risk driver if revised criteria for cobalt from MDE (2013) had been used for COPC selection.

No unacceptable medium-specific risks or risk drivers were selected for subsurface soil or shallow groundwater based on the HHRA; therefore, no COCs are selected for these media. Although unacceptable risks and risk drivers were identified for intermediate groundwater, the intermediate groundwater samples likely are more representative of off-site contamination than site-related contamination. Thus, the risk drivers (COCs) identified above for intermediate groundwater are not selected as COCs for the Drum Removal Area.

Migration from Soil to Groundwater

Based on comparisons to screening criteria, COPCs were identified for migration from subsurface soil to groundwater: cis-1,2-dichloroethene, trichloroethene, PCBs, Aroclor-1260, antimony, cobalt, iron, lead, manganese, selenium, silver, and cyanide.

COPCs for migration to groundwater were evaluated qualitatively by considering factors such as whether chemicals were also selected as COPCs in groundwater and whether soil concentrations exceed MCL-based soil screening levels (SSLs). Based on the qualitative evaluation, subsurface soil chemical concentrations are not expected to negatively impact groundwater quality at the Drum Removal Area.

Vapor Intrusion

Concentrations of VOCs exceeding screening criteria for vapor intrusion based on an HI of 0.1 or an ILCR of 1×10^{-6} were detected in three shallow and two intermediate wells in the Drum Removal Area, including trichloroethene at shallow wells MW03-15S, MW03-16S, and MW03-17S and 1,1,2,2-tetrachloroethane, 1,1,2-trichloroethane, trichloroethene, and vinyl chloride at intermediate well MW03-16I-NWG-102814 and trichloroethene at intermediate well MW03-17I-NWG-100214. The chemicals exceeding screening criteria were further evaluated using the VISL calculator (Attachment A-2).

For Drum Removal Area shallow groundwater, the ILCRs for residential and industrial exposures to the maximum concentration of trichloroethene were less than or within the USEPA target risk range of 1×10^{-4} to 1×10^{-6} . The total ILCRs were also less than the RIDEM target cancer risk level of 1×10^{-5} . Total HIs for residential and industrial exposures to the maximum concentration of trichloroethene were less than the target HI of 1. No COCs are selected for the shallow groundwater zone underlying the Drum Removal Area.

For Drum Removal Area intermediate groundwater, total HIs for residential and industrial exposures exceeded 1 (on a target organ basis) due to trichloroethene. The ILCRs for Drum Removal Area intermediate groundwater exceeded the USEPA target risk range and RIDEM target cancer risk level for residential exposures and exceeded the RIDEM target cancer risk level only for industrial exposures due to trichloroethene. Although CVOCs are COCs for the intermediate/deeper groundwater zones underlying the Drum Removal Area (and the entire CED Area), VOCs in shallow groundwater are expected to be more representative of potential vapor intrusion sources than intermediate groundwater, and upgradient sources (i.e., the Nike site) are likely the predominant source of VOCs detected in the intermediate/deeper groundwater.

Detected concentrations are presented in bold font. Concentrations exceeding the lower of USEPA RSLs and RIDEM residential criteria are shaded yellow.

Footnotes:

- USEPA Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites, January 2015. RSLs are based on a lifetime cancer risk of 1E-06 or a noncancer hazard quotient (HQ) of 1.
- Rhode Island Department of Environmental Management (RIDEM), DEM-DSR-01-93, November 2011.
- The screening value is for polychlorinated biphenyls.
- The screening value is for trivalent chromium.
- The USEPA RSL is for mercuric chloride (and other mercury salts).

Definitions:

DRO = Diesel Range Organics
NA = Not applicable/not available
TPH = Total Petroleum Hydrocarbons

Qualifiers:

J = Estimated value.
U = Non-detected value.
UJ = Non-detected result is estimated.

Detected concentrations are presented in bold font. Concentrations exceeding the lower of USEPA Risk-based SSLs and RIDEM GA leachability criteria are shaded yellow.

Footnotes:

1 - USEPA Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites, January 2015.

Risk-based soil screening levels (SSLs) are based on a lifetime cancer risk of 1E-06 or a noncancer hazard quotient (HQ) of 1.

2 - Rhode Island Department of Environmental Management (RIDEM), DEM-DSR-01-93, November 2011.

3 - The screening value is for polychlorinated biphenyls.

4 - The screening value is for trivalent chromium.

5 - Maximum Contaminant Level (MCL)-based value.

Definitions:

DRO = Diesel Range Organics

NA = Not applicable/not available

TPH = Total Petroleum Hydrocarbons

Qualifiers:

J = Estimated value.

U = Non-detected value.

UJ = Non-detected result is estimated.

Detected concentrations are presented in bold font. Concentrations exceeding the lower of USEPA RSLs and RIDEM residential criteria are shaded yellow. Concentrations exceeding MCLs are presented in bold red font and shaded yellow.

Footnotes:

- 1 - Rhode Island Department of Environmental Management (RIDEM), DEM-DSR-01-93, November 2011.
- 2 - USEPA Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites, January 2015.
RSLs are based on a lifetime cancer risk of 1E-06 or a noncancer hazard quotient (HQ) of 1.
- 3 - Federal Maximum Contaminant Levels (MCLs), 2012 Edition of the Drinking Water Standards and Health Advisories. Office of Water, Washington, D.C. EPA 822-S-12-001. April.
- 4 - The screening value is for trivalent chromium.

Definitions:

DRO = Diesel Range Organics
GRO = Gasoline Range Organics
MTBE = Methyl tert-butyl ether
N = Noncarcinogen
NA = Not applicable/not available
TPH = Total Petroleum Hydrocarbons

Qualifiers:

J = Estimated value.
U = Non-detected value.

Detected concentrations are presented in bold font. Concentrations exceeding the USEPA VISL are shaded yellow.

Footnotes:

1 - Calculated using USEPA's Vapor Intrusion Screening Level (VISL) calculator Version 3.3, May 2014 RSLs. Values correspond to a target cancer risk level of 1E-06 for carcinogens (C) or hazard quotient (HQ) of 1 for noncarcinogens (N) and an attenuation factor of 0.001.

Definitions:

C = Carcinogen
 DRO = Diesel Range Organics
 GRO = Gasoline Range Organics
 MTBE = Methyl tert-butyl ether
 NA = Not applicable/not available
 TPH = Total Petroleum Hydrocarbons

Qualifiers:

J = Estimated value.
 R = Rejected result.
 U = Non-detected value.
 UJ = Non-detected result is estimated.

EVALUATION OF LEACHING POTENTIAL)**

ATTACHMENT A-1

CHARACTERIZATION OF GROUNDWATER AT SITES 02/03 (IN SUPPORT OF THE EVALUATION OF LEACHING POTENTIAL) CONSTRUCTION EQUIPMENT DEPARTMENT AREA FORMER NCBC DAVISVILLE, NORTH KINGSTOWN, RHODE ISLAND

1.0 Introduction

This human health risk assessment (HHRA) for groundwater at the Construction Equipment Department (CED) Area Sites 02 and 03 evaluates risks to potential human receptors exposed through direct contact (i.e., incidental ingestion, dermal contact, and inhalation) with groundwater under current and hypothetical future land use scenarios. The CED Area is located within Former NCBC Davisville in North Kingstown, Rhode Island (Figure 1-1 of the main report). Sites 02/03 are located in the southeastern corner of the CED Area (Figure 1-2 of the main report). The *Human Health Risk Evaluation for Construction Equipment Department, Former Naval Construction Battalion Center Davisville, North Kingstown, Rhode Island* (Tetra Tech, 2014a) previously evaluated direct contact risks for receptors exposed to chemicals in soils at Sites 02/03 and did not identify unacceptable risks for this pathway; however, possible soil contaminants of concern (COCs) for groundwater protection (TPH, naphthalene, and select metals) were identified. Specifically, the report concluded that there is limited evidence of the potential for contaminant migration from soil to groundwater at the CED Area based on available historical shallow groundwater data. Because the historical data were relatively old and incomplete for some COCs, additional data were collected from select upgradient and CED Area wells to better evaluate the potential for leachability of COCs from soil to groundwater. This document provides an update of the analysis of the potential for chemical migration from soil to groundwater presented in the 2014 CED Area soils risk assessment (Section 5) along with an evaluation of direct contact with groundwater from Sites 02/03. Groundwater sampling locations are displayed on Figure 3-1 of the main report.

United States Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs) or calculated risk-based concentrations (RBCs) incorporating site-specific exposure assumptions were used to develop risk estimates based on the risk-ratio approach demonstrated in Section 5. The risk-ratio approach is a simple, efficient approach that allows for the quick of assessment of a multiple data sets or scenarios.

All HHRA consist of four components: selection of chemicals of potential concern (COPCs), exposure assessment, toxicity assessment, and risk characterization. Sections 2 through 5 contain detailed discussions of the four components of this HHRA.

2.0 Selection of COPCs

COPC selection was performed for shallow groundwater, and COPC selection is presented in Table A-1.1. Screening criteria for groundwater were based on USEPA RSLs for tap water (USEPA, 2015), USEPA Maximum Contaminant Levels (MCLs) (USEPA, 2012), and RIDEM GA and GB Groundwater Objectives (RIDEM, 2011). COPCs were selected based on the lowest screening level derived from these criteria. The screening concentrations based on the RSLs correspond to a systemic hazard quotient (HQ) of 0.1 for noncarcinogens or an incremental lifetime cancer risk (ILCR) of 1×10^{-6} for carcinogens. The noncarcinogenic RSLs represent an HQ of 0.1 to account for the potential cumulative effects of several chemicals affecting the same target organ or producing the same adverse noncarcinogenic effect.

Screening criteria for trivalent chromium were used to evaluate total chromium data in the HHRA because historical site activities for the CED Area do not suggest that hexavalent chromium would be a significant contaminant at any sites in the investigation area.

In the 2014 risk evaluation (Tetra Tech, 2014a), soil results for Sites 02 and 03 were compared to generic federal risk-based soil screening levels (SSLs) for groundwater protection designed to be protective of groundwater at most sites (as published in the USEPA RSL table). These groundwater protection SSLs allow an initial qualitative evaluation of the potential for chemical migration from soil to groundwater. Chemicals with concentrations exceeding the SSLs may potentially migrate from the soil to groundwater in sufficient quantities to pose groundwater quality problems. The COPCs selected from this screening comparison were evaluated qualitatively to identify potential COPCs for migration to groundwater. Based on this qualitative evaluation, TPH, naphthalene, and select metals were identified as possible soil COCs for groundwater protection. Section 5 presents an updated evaluation for migration to groundwater that incorporates the 2014 groundwater results.

No formal site-specific background data sets are available for the groundwater samples from Sites 02 and 03. For groundwater at Sites 02/03, chemical concentrations detected in upgradient wells (MW01-10S, MW01-13S, and MW01-14S) were considered for use in eliminating chemicals from COPC selection. However, because a formal background data set has not been approved by USEPA and RIDEM, if any chemical was eliminated from COPC selection due to upgradient concentrations, groundwater risks were calculated both 1) excluding chemicals detected at concentrations greater than screening levels but less

than upgradient concentrations, and 2) including all chemicals detected at concentrations greater than screening levels. The uncertainty associated with the lack of a formal background data set is further discussed in Section 6.

The following chemicals were selected as COPCs for direct contact with shallow groundwater (Table A-1.1):

- **Direct Contact with Shallow Groundwater:**
 - Semivolatiles: naphthalene
 - Metals: cobalt and manganese

The COPCs for direct contact are further evaluated in the risk ratio tables presented in Section 5. Groundwater results were also screened against criteria for vapor intrusion as part of a separate vapor intrusion evaluation (Attachment A-2).

3.0 Exposure Assessment

Current and future anticipated land use at the sites/study areas is industrial/commercial. There are no plans for the future residential development of the sites/study areas; residential receptors were included primarily to support risk-management decisions. Receptors evaluated in this HHRA are current and future construction workers and hypothetical future residents (child, adult, and lifelong). Future industrial workers and current and future recreational users are potential receptors for the sites but are not expected to have direct contact with groundwater and therefore are not further discussed.

Construction workers could potentially be exposed to groundwater if present in trenches during excavation activities via incidental ingestion, dermal contact, or inhalation of VOCs. In addition, the hypothetical future resident could potentially be exposed to contaminants in groundwater via ingestion, dermal contact, and inhalation (i.e., showering/bathing), and indoor air (vapor intrusion) (see Attachment A-2 for vapor intrusion evaluation). (Industrial workers could also potentially be exposed via inhalation to VOCs migrating from groundwater into indoor air (vapor intrusion), but that exposure pathway is evaluated in Attachment A-2.)

Residential exposures were evaluated using current USEPA RSLs (USEPA, 2015). The methodology USEPA used to calculate the RSLs is based on default USEPA exposure assumptions and presented in the User Guide accompanying the January 2015 RSL table. Exposure assumptions for residential receptors are summarized in Attachment A-4. For residents, carcinogenic RSLs represent lifelong (child

+ adult) exposures and non-carcinogenic RSLs represent child exposures to evaluate the most conservative receptors.

To evaluate construction worker exposures, RBCs representing a 1E-06 cancer risk level and an HQ of 1 (i.e., the no-adverse-effect concentration) were developed for carcinogens and non-carcinogens, respectively. RBCs for construction worker direct contact (incidental ingestion, dermal contact, and inhalation) exposures with soil were calculated using methodology similar to that used by USEPA to develop the RSLs. The methodology and exposure assumptions used to calculate RBCs for construction workers are presented in Attachment A-5. Exposure assumptions for groundwater are based on current USEPA guidance (e.g., USEPA, 2014). Exposure assumptions for construction workers are summarized in Attachment A-4. RBCs were calculated for construction workers exposed to soil and construction workers exposed to groundwater (Attachment A-5).

The exposure point concentration (EPC) is defined as the concentration to which a receptor is exposed. In this HHRA, the 95-percent upper confidence limit (95% UCL) on the arithmetic mean was evaluated as the EPC, when appropriate. The maximum detected concentration was used as the EPC if there were an insufficient number of positive detections (i.e., less than four), as was the case for naphthalene and cobalt in groundwater. Groundwater data (collected between 21 and 28 feet bgs) for Sites 02 and 03 were from the shallow zone and were evaluated as a single data set.

EPCs were calculated following USEPA's Calculating Upper Confidence Limits for Exposure Point Concentrations at Hazardous Waste Sites (USEPA, 2002) and using USEPA's ProUCL software Version 5.0.00 (USEPA, 2013). If ProUCL was unable to calculate a 95% UCL, then the maximum detected concentration was used as the EPC. Non-detected values were evaluated in accordance with the ProUCL guidance. EPCs evaluated in this HHRA are presented in the risk-ratio tables described in Section 5. ProUCL outputs are included in at the end of this attachment.

4.0 Toxicity Assessment

The toxicity values used to calculate the RBCs are identified in Tables A-5.1 through A-5.4 in Attachment A-5 and are those values published in the January 2015 USEPA RSL table (USEPA, 2015).

5.0 Results of the Risk Characterization

Risk estimates were calculated using a simple risk-ratio methodology and the RBCs. The RBCs for receptor exposures to groundwater represent, in effect, an HQ of 1 (i.e., the no-adverse-effect concentration) for non-carcinogens and a 1×10^{-6} target cancer risk level for carcinogens. Cancer and

non-cancer risk estimates were developed using the risk-ratio technique demonstrated in the following formula:

$$\frac{\text{RBC for Receptor}}{\text{EPC for Chemical}} = \frac{\text{TargetHQ of 1 or TargetCancerRisk Estimate of } 1\text{E} - 06}{\text{HQ or CancerRisk Estimate}}$$

Solving this equation for HQ or cancer risk yields:

$$\text{HQ or CancerRisk Estimate} = \frac{\text{EPC for Chemical} \times \text{TargetHQ of 1 or TargetCancerRisk Estimate of } 1\text{E} - 06}{\text{RBC for Receptor}}$$

The following example calculations are provided for residential exposure to the maximum concentration of naphthalene in the shallow groundwater data set (see Table A-1.3):

$$\text{Cancer risk estimate} = \frac{2.8 \times 1\text{E} - 06}{0.17} = 1.6\text{E} - 05$$

$$\text{HQ} = \frac{2.8 \times 1}{6.1} = 0.46$$

A hazard index (HI) was generated by summing the individual HQs for all chemicals. The HI is not a mathematical prediction of the severity of toxic effects, and therefore is not a true "risk"; it is simply a numerical indicator of the possibility of the occurrence of noncarcinogenic (threshold) effects. Calculated cancer risks were interpreted primarily using the USEPA's "target risk range" (1×10^{-6} to 1×10^{-4}) and the State of Rhode Island cancer risk benchmark of 1×10^{-5} (as a point of reference), and HIs were interpreted using a value of 1 (i.e., the no-adverse-effect level). If an HI exceeds unity, a segregation of target organ effects associated with exposure to the chemicals evaluated is typically performed. Only those chemicals that affect the same target organ(s) or exhibit similar critical effect(s) are regarded as truly additive. Consequently, it may be possible for a cumulative HI to exceed 1, but no adverse health effects are anticipated if the chemicals evaluated do not affect the same target organ or exhibit the same critical effect. The results of risk-ratio evaluations are presented in Tables A-1.2 and A-1.3. A summary of the results of the risk-ratio evaluations is provided below.

Summary of Cancer and Non-Cancer Risk Estimates and Risk Contributors⁽¹⁾ for Receptor Direct Contact with Groundwater

Table Number	Data Set Evaluated	Receptor	Risk Estimates ⁽²⁾⁽³⁾	
			Cancer Risk Estimate	Hazard Index
A-1.2	Shallow groundwater	Construction Worker	5×10^{-10}	0.7
A-1.3		Hypothetical Resident	<i>2×10^{-5}</i> <i>(naphthalene)</i>	1

- 1 A noncarcinogenic risk contributor is a chemical that contributes substantially (i.e., greater than an HQ of 0.1) to a target organ-specific HI that exceeds 1. A carcinogenic risk contributor is a chemical with a calculated cancer risk estimate exceeding 1×10^{-6} when the medium-specific total cancer risk for the receptor exceeds 1×10^{-5} .
- 2 Italicized carcinogenic risk estimates exceed the State of Rhode Island cancer risk limit of 1×10^{-5} . Bolded carcinogenic risk estimates exceed USEPA's target cancer risk range of 1×10^{-6} to 1×10^{-4} . Bolded HIs exceed the target level of 1. A chemical name presented in parentheses indicates the primary chemical driving risk.
- 3 The cancer risk and HI presented for the hypothetical resident are for the lifelong resident and child resident (i.e., the most conservative receptors), respectively.

As shown in the summary table, HIs for construction workers and hypothetical residents exposed to shallow groundwater are less than the target level of 1. Therefore, no adverse noncarcinogenic effects are expected for exposures to subsurface soil or shallow groundwater.

Soil risks and HIs for Sites 02/03 were estimated in the January 2014 Human Health Risk Evaluation for Construction Equipment Department (Tetra Tech, 2014a). HIs for cumulative risks (soil and groundwater) are presented in the following table:

Medium	Construction Worker HI	Resident HI
Site 02 Surface Soil (Tetra Tech, 2014a)	0.5	0.9
Site 02 Subsurface Soil (Tetra Tech, 2014a)	2	3 ⁽¹⁾
Site 03 Surface Soil (Tetra Tech, 2014a)	0.5	1
Site 03 Subsurface Soil (Tetra Tech, 2014a)	0.5	0.9
Sites 02/03 Shallow Groundwater – Direct Contact	0.7	1
Sites 02/03 Shallow Groundwater – Vapor Intrusion (Attachment A-2)	NA	0.7
Total: Site 02 Surface Soil + Groundwater	1	3 ⁽¹⁾
Total: Site 02 Subsurface Soil + Groundwater	3	5 ⁽¹⁾
Total: Site 03 Surface Soil + Groundwater	1	3 ⁽¹⁾
Total: Site 03 Subsurface Soil + Groundwater	1	3 ⁽¹⁾

1 – Target organ HIs do not exceed 1.

For the construction worker, HIs do not exceed 1 other than for the Site 02 subsurface soil HI and the Site 02 subsurface soil and groundwater total HI, and the 2014 risk evaluation already noted considerable uncertainty for the Site 02 subsurface soil HI exceeding 1 primarily due to manganese toxicity criteria used. HIs would not exceed 1 on a target organ basis if more recent toxicity criteria were used for manganese (Tetra Tech, 2014). For the resident, total HIs for each soil data set and groundwater exceed 1, but target organ HIs were less than or equal to 1.

Cancer risk estimates for shallow groundwater evaluations are less than or within the USEPA's target cancer risk range of 1×10^{-6} to 1×10^{-4} , and the cancer risk estimate for construction workers exposed to shallow groundwater is less than the State of Rhode Island cancer risk benchmark of 1×10^{-5} . The cancer risk estimate for shallow groundwater evaluation is greater than the State of Rhode Island cancer risk benchmark of 1×10^{-5} . Naphthalene, detected in only 1 of 14 groundwater samples, is the sole risk contributor for cancer risks. It should be noted that the maximum concentrations of naphthalene was used as the EPC, which results in added uncertainty. Section 5 discusses uncertainty associated with using the maximum concentration as the EPC.

Soil risks and HIs for Sites 02/03 were estimated in the January 2014 Human Health Risk Evaluation for Construction Equipment Department (Tetra Tech, 2014a). ILCRs for cumulative risks (soil and groundwater) are presented in the following table:

Medium	Construction Worker ILCR	Resident ILCR
Site 02 Surface Soil (Tetra Tech, 2014a)	8×10^{-8}	4×10^{-6}
Site 02 Subsurface Soil (Tetra Tech, 2014a)	3×10^{-7}	6×10^{-8}
Site 03 Surface Soil (Tetra Tech, 2014a)	8×10^{-8}	2×10^{-6}
Site 03 Subsurface Soil (Tetra Tech, 2014a)	9×10^{-8}	2×10^{-8}
Sites 02/03 Shallow Groundwater – Direct Contact	5×10^{-10}	2×10^{-5}
Sites 02/03 Shallow Groundwater – Vapor Intrusion (Attachment A-2)	NA	3×10^{-6}
Total: Site 02 Surface Soil + Groundwater	8×10^{-8}	2×10^{-5}
Total: Site 02 Subsurface Soil + Groundwater	3×10^{-7}	2×10^{-5}
Total: Site 03 Surface Soil + Groundwater	8×10^{-8}	2×10^{-5}
Total: Site 03 Subsurface Soil + Groundwater	9×10^{-8}	2×10^{-5}

Total ILCRs for construction worker exposures to soil and shallow groundwater do not exceed the State of Rhode Island target risk level of 1×10^{-5} or USEPA's target cancer risk range of 1×10^{-6} to 1×10^{-4} .

Total ILCRs for residential exposures exceed 1×10^{-5} due to exposures with naphthalene in groundwater via direct contact; USEPA's target risk range (1×10^{-6} to 1×10^{-4}) is not exceeded.

As noted in Section 2, TPH, naphthalene, and select metals were selected as possible COCs for chemical migration from soil to groundwater based on the 2014 risk evaluation. Both TPH components, diesel range organics (DRO) and gasoline range organics (GRO), were detected in 1 of 14 groundwater samples collected from Sites 02/03 in 2014. Positive TPH and naphthalene detections were only reported for the groundwater samples collected from MW02-10S. No groundwater screening criteria or historical groundwater data for MW02-10S are available for TPH DRO and GRO. The detected concentration of naphthalene (2.8 ug/L) exceeds the USEPA tap water RSL (0.17 ug/L based on an ILCR of 1×10^{-6}) but is less than the RIDEM GA groundwater objective (100 ug/L). The detection of naphthalene in the September/October 2014 samples is less than the most recent historical detection of naphthalene in this well (32.4 ug/L, detected in a sample from 2007). Additionally, historical concentrations of the sum of the fuel-related compounds benzene, toluene, ethylbenzene, and xylenes (BTEX) were approximately 2,000 ug/L in original/duplicate samples collected in 1995, less than 100 ug/L in the sample from 2007, and non-detected in MW02-10S (and all other wells at Sites 02/03) in the 2014 data set. The presence of fuel-related compounds in MW02-10S at levels significantly less than historical concentrations may be evidence of degradation over time and suggests that significant residual soil contamination is no longer present.

As stated in the Sampling and Analysis Plan (SAP) (Tetra Tech, 2014b) associated with the September/October sampling event, some metals (e.g., cobalt and manganese) exceeded SSLs for migration to groundwater. Although metals were not anticipated to be a concern for migration to groundwater based on the qualitative analysis in the CED Area risk evaluation (Tetra Tech, 2014a), this conclusion is re-evaluated with the current groundwater data set because historical groundwater metals results were not available for Sites 02/03. Based on the 2014 data set, only cobalt and manganese are selected as COPCs for groundwater. Cobalt was detected in only 2 of 14 samples, and manganese was detected in 14 of 14 samples. The maximum concentrations of cobalt (0.93 ug/L) and manganese (357 ug/L) do not exceed their tap water RSLs based on an HQ of 1 (6 ug/L and 430 ug/L, respectively). In addition, uncertainty is associated with the toxicity criteria used to derive the RSL for cobalt (see Section 6). Based on these considerations, the 2014 groundwater data do not indicate that groundwater has been negatively impacted by concentrations of metals in soil from Sites 02/03.

6.0 Uncertainty Analysis

The following sources of uncertainty should be considered when interpreting the results of the risk evaluations:

- No formal site-specific background data sets are available for the groundwater samples from the CED Area Drum Removal Area. For groundwater, chemical concentrations detected in upgradient wells (MW01-10S, MW01-13S, and MW01-14S) were considered for use in eliminating chemicals as COPCs. However, chemicals detected at concentrations greater than screening levels in groundwater were also detected at concentrations greater than background or upgradient concentrations. Therefore, the results of COPC selection are not affected by whether available background/upgradient concentrations are used to eliminate chemicals as COPCs. For groundwater, upgradient concentrations were collected to provide background concentrations particularly for metals in groundwater. Cobalt and manganese were the metals selected as a COPC in groundwater. Cobalt and manganese both contributed to HQs only (no cancer-based toxicity criteria are available for these metals for the pathways evaluated), and HQs did not exceed the target level of 1. Therefore, the lack of a formal background data set does not add considerable uncertainty to the HHRA conclusions.
- Maximum concentrations were used as EPCs for groundwater exposures estimated in this HHRA for naphthalene and cobalt because of the small number of positive detections (i.e., one for naphthalene and two for cobalt). As noted previously, using maximum concentrations for EPCs is conservative and likely results in an overestimation of risk because it assumes that a receptor is continually exposed to the greatest concentration detected in the data set. Consequently, risk estimates calculated using the 95% UCL as the EPC are likely to be more representative of actual exposure conditions. Naphthalene was the sole contributor to cancer risks exceeding the State of Rhode Island cancer risk benchmark; therefore, considerable uncertainty is associated with the EPC for naphthalene. Naphthalene was detected in only 1 of 14 groundwater samples.
- For purposes of risk characterization, screening levels were calculated for construction workers using toxicity values from the January 2015 USEPA RSL table and exposure assumptions based on USEPA guidance when applicable. Some exposure assumptions (e.g., exposure frequency) were based on professional judgment.
- Although the future land use of the sites/study areas is anticipated to be industrial/commercial or recreational, the residential land use scenario was evaluated in this HHRA primarily to support risk-management decisions.
- Toxicity criteria are available for different forms of chromium. Hexavalent chromium is considered to be highly toxic versus trivalent chromium. In COPC selection, total chromium was assumed to be present in the trivalent form because it is unlikely that hexavalent chromium is the dominant species

in CED Area media. The following table compares EPCs used in the evaluations for total chromium to the corresponding screening criteria (based on an ILCR = 1×10^{-6} or an HQ of 0.1).

EPCs for Chromium	Residential RSLs – Cr III	Tap Water RSLs – Cr VI
Shallow Groundwater (ug/L)		
Maximum = 2.9 (total) Maximum = 1.4 (dissolved)	Noncancer: 2,200 Cancer: Not Applicable	Noncancer: 4.4 Cancer: 0.035

If the screening criteria for hexavalent chromium had been used for COPC selection, chromium would have been selected as a COPC for groundwater. However, as stated previously, it is unlikely that hexavalent chromium is the dominant species in CED Area media.

- Cobalt was selected as a COPC in groundwater based on an exceedance of the USEPA RSL. Uncertainty is associated with selecting cobalt as a COPC because cobalt is a naturally-occurring metal and the conservative screening levels (based on USEPA criteria) are likely to be less than background levels of cobalt expected at some sites. For example, the Maryland Department of the Environment (MDE) selected revised criteria for cobalt of 50 mg/kg for soil and 100 ug/L for groundwater based on Agency for Toxic Substances and Disease Registry (ATSDR) toxicity values (MDE, 2013). These MDE value for cobalt is considerably greater than the current USEPA cobalt RSLs for tap water (6 ug/L). Cobalt would not have been selected as a COPC for groundwater at Sites 02/03 if the MDE value for cobalt was used for COPC selection instead of the USEPA RSL.

7.0 Summary and Conclusions

The HHRA for the CED Area Sites 02/03 evaluated potential risks and hazards for exposures to shallow-zone groundwater. Groundwater samples collected in September/October 2014 were used in the HHRA and were compared to conservative screening levels for direct contact exposures. Vapor intrusion exposures for groundwater were evaluated separately (see Attachment A-2). Additionally, groundwater data from the most recent sampling round were used to update the qualitative evaluation for migration from soil to groundwater originally presented in the 2014 risk evaluation (Tetra Tech, 2014a). Screening criteria for trivalent chromium were used to evaluate total chromium data in the HHRA because historical site activities for the CED Area do not suggest that hexavalent chromium would be a significant contaminant at any sites in the investigation area.

Risk drivers for direct contact exposures are presented below.

Environmental Medium	Receptors	Risk Drivers
Shallow Groundwater	Construction Worker	None
	Hypothetical Resident	Naphthalene

Naphthalene was identified as a risk driver for hypothetical resident exposure to groundwater based on the HHRA. However, unacceptable Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) risks were not predicted for receptor exposure to groundwater and naphthalene was only detected in 1 of 14 groundwater samples. Also, the maximum concentration was used as the EPC, which likely overestimates risks. Additionally, naphthalene was detected at well MW02-10S, where historical concentrations of fuel-related contaminants were greater than current concentrations, indicating that contaminant concentrations may be attenuating over time. Therefore, naphthalene is not selected as a COC. However, future monitoring is recommended to assure that concentrations continue to attenuate over time.

Footnotes:

- 1 - Sample and duplicate are considered as two separate samples when determining the minimum and maximum concentrations.
 - 2 - Values presented are sample-specific quantitation limits.
 - 3 - The maximum detected concentration is used for screening purposes.
 - 4 - The range of concentrations from wells MW01-10S, MW01-13S, and MW01-14S is presented.
 - 5 - USEPA Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites, January 2015.
RSLs are based on a lifetime cancer risk of 1E-06 or a noncancer hazard quotient (HQ) of 0.1.
 - 6 - Federal Maximum Contaminant Levels (MCLs), 2012 Edition of the Drinking Water Standards and Health Advisories. Office of Water, Washington, D.C. EPA 822-5-12-001. April.
 - 7 - Rhode Island Department of Environmental Management (RIDEM), DEM-DSR-01-99, November 2011.
 - 8 - The chemical is selected as a COPC if the maximum detected concentration exceeds the risk-based COPC screening level and is greater than upgradient/background concentrations.
 - 9 - The screening value is for trivalent chromium.
 - 10 - In accordance with USEPA Region I guidance, only total metals groundwater results are used in the risk assessment; dissolved metals results are presented for information purposes only and are not used for COPC selection.
- Shaded criterion indicates that the maximum detected concentration exceeds one or more screening criteria. Shaded chemical name indicates that the chemical was retained as a COPC.

Definitions:

- C = Carcinogen
- COPC = Chemical Of Potential Concern
- J = Estimated value
- N = Noncarcinogen
- NA = Not Applicable/Not Available

Rationale Codes:

- For selection as a COPC:
- ASL = Above Screening Level and background

For elimination as a COPC:

- BSL = Below COPC Screening Level
- NUT = Essential nutrient
- NTX = No toxicity criteria
- Reg. I = USEPA Region I guidance

ATTACHMENT A-2

CHARACTERIZATION OF VAPOR INTRUSION POTENTIAL AT SITES 02/03

ATTACHMENT A-2

CHARACTERIZATION OF VAPOR INTRUSION POTENTIAL AT SITES 02/03 CONSTRUCTION EQUIPMENT DEPARTMENT AREA FORMER NCBC DAVISVILLE, NORTH KINGSTOWN, RHODE ISLAND

1.0 Introduction

Volatile organic chemicals (VOCs) detected in shallow-depth groundwater wells at Sites 02/03 within Construction Equipment Department (CED) Area and the Drum Removal Area were evaluated to determine if there would be unacceptable risks associated with vapor intrusion into hypothetical future buildings within the study area. Conservatively, groundwater data for intermediate-depth wells located within the Drum Removal Area were also evaluated even though VOC results for these wells do not represent water-table concentrations, the most appropriate concentrations to evaluate in a vapor intrusion analysis. The risk assessment presented herein considers the groundwater data collected from the most recent sampling event (September 2014), collected as discussed in Sections 4.0 and 5.0 of the main report. Figure 3-1 of the main report shows groundwater sampling locations.

Analytical data for chemicals detected at least once in each groundwater data set considered in the evaluation are presented as Tables A-2.1, A-2.2, and A-2.3 for Sites 02/03 groundwater, Drum Removal Area shallow groundwater, and Drum Removal Area intermediate groundwater, respectively, along with screening criteria defined below. Wells MW01-10S, MW01-13S, and MW01-14S were considered upgradient/background wells for Sites 02/03 for purposes of chemical of potential concern (COPC) selection; however, no volatiles were detected in these upgradient/background wells. The analytical results for groundwater data sets considered in this evaluation are presented in Appendix B.

Concentrations of volatile chemicals detected in the groundwater samples were compared to screening criteria for vapor intrusion. These screening criteria, calculated using USEPA's Vapor Intrusion Screening Level (VISL) calculator (Version 3.3, May 2014 RSLs) (USEPA, 2014a), were derived to identify chemical concentrations in groundwater that may adversely affect the indoor air quality of a building overlying subsurface VOC contamination. The vapor intrusion criteria assume a subsurface attenuation factor (from groundwater-to-indoor-air concentrations) of 0.001. The values correspond to a target cancer risk level of 1×10^{-6} or a hazard quotient (HQ) of 0.1 to account for potential cumulative effects of chemicals affecting the same target organ. The results of the screening evaluation are presented below.

2.0 Comparison of Detected Concentrations to Vapor Intrusion Screening Criteria

Sites 02/03 Shallow Groundwater

Four VOCs, one semivolatile organic compound (SVOC) (naphthalene), metals, and petroleum hydrocarbons were detected in the Sites 02/03 groundwater samples listed in Table A-2.1. Table A-2.4 presents a summary of descriptive statistics and the COPC selection for the CED Area shallow groundwater data displayed in Table A-2.1. No chemicals were detected at maximum concentrations exceeding the screening criteria for vapor intrusion. Therefore, no chemicals were selected as COPCs for the CED Area shallow groundwater data set; further vapor intrusion risk evaluation of this data set was not conducted.

Drum Removal Area – Shallow Groundwater Wells (MW03-15S, MW03-16S, and MW03-17S)

Two VOCs and metals were detected in the Drum Removal Area shallow groundwater samples listed in Table A-2.2. Table A-2.5 presents a summary of descriptive statistics and the COPC selection for the Drum Removal Area shallow groundwater data displayed in Table A-2.2. Trichloroethene, the only chemical detected at a maximum concentration exceeding the screening criterion for vapor intrusion, was selected as a COPC for the vapor intrusion evaluation of the shallow groundwater data set for the Drum Removal Area and was further evaluated using USEPA's VISL calculator.

Drum Removal Area – Intermediate Groundwater Wells (MW03-15I, MW03-16I, and MW03-17I)

Analytical data for VOCs and metals detected in the Drum Removal Area intermediate groundwater samples are presented in Table A-2.3. Table A-2.6 presents a summary of descriptive statistics and the COPC selection for the groundwater data displayed in Table A-2.3. The following four chemicals were detected at maximum concentrations exceeding the screening criteria for vapor intrusion and were selected as COPCs for further vapor intrusion evaluation using the USEPA's VISL calculator:

- 1,1,2,2-Tetrachloroethane (exceeded in MW03-16I-NWG-102814)
- 1,1,2-Trichloroethane (exceeded in MW03-16I-NWG-102814)
- Trichloroethene (exceeded in MW03-16I-NWG-102814 and MW03-17I-NWG-100214)
- Vinyl chloride (exceeded in MW03-16I-NWG-102814)

As noted above, trichloroethene was the only chemical detected in samples from MW03-17I at concentrations exceeding screening levels. All COPCs were detected in MW03-16I.

3.0 Vapor Intrusion Risk Calculations

There are currently no buildings within the study area. Consequently, this evaluation considered a hypothetical scenario where a residential or industrial building was constructed within the study area.

In accordance with USEPA guidance (2013, 2014b), insufficient data were available to calculate an exposure point concentration (EPC) within the center of the plume; therefore, the maximum detected concentrations from the groundwater data sets were used as the EPCs for each chemical exceeding the screening levels. The VISL calculator was used to evaluate both a hypothetical future residential land use scenario as well as an industrial land use scenario using the default values incorporated in the calculator. Toxicity criteria from the May 2014 Regional Screening Level (RSL) table, incorporated in the VISL calculator, were used to calculate risks.

4.0 Results

The results of the vapor intrusion modeling are summarized in Tables A-2.7 and A-2.8 for COPCs detected in the shallow and intermediate Drum Removal Area groundwater, respectively. The risk calculation files from the VISL calculator are presented at the end of this attachment. The total hazard index (HI) for noncarcinogens is compared to the USEPA and Rhode Island Department of Environmental Management (RIDEM) target level of 1. The total incremental lifetime cancer risk (ILCR) for carcinogens is compared to the USEPA target cancer risk range of 1×10^{-4} to 1×10^{-6} and the RIDEM target cancer level of 1×10^{-5} .

Drum Removal Area – Shallow Wells

Total HIs for residential and industrial exposures to the maximum concentration of trichloroethene were less than the target HI of 1, indicating that adverse noncarcinogenic effects are not anticipated for these receptors under the defined exposure conditions.

The ILCRs for residential and industrial exposures to the maximum concentration of trichloroethene were less than or within the USEPA target risk range of 1×10^{-4} to 1×10^{-6} . The total ILCRs were also less than the RIDEM target cancer risk level of 1×10^{-5} .

Drum Removal Area – Intermediate Wells

As stated previously, intermediate area wells were evaluated primarily for purposes of completeness, as chemicals detected in shallow/water table wells are expected to provide a better indication of potential vapor intrusion risks. Additionally, it is anticipated that chemicals detected at intermediate depths are

more representative of off-site contamination [i.e., the upgradient United States Army Corps of Engineers (USACE) Nike site] instead of site-related contamination; see Section 5.0 for a discussion of potential off-site contamination sources.

Total HIs for residential and industrial exposures to the maximum concentrations of all COPCs were greater than the target HI of 1, and target organ-specific HIs for the liver also exceeded 1. Trichloroethene is the primary risk driver.

The total ILCR (2×10^{-4}) for residential exposures to the maximum concentrations of all COPCs was greater than the USEPA target risk range of 1×10^{-4} to 1×10^{-6} and greater than the RIDEM target cancer risk level of 1×10^{-5} . The total ILCR (3×10^{-5}) for industrial exposures is within the USEPA target cancer risk range but exceeds the RIDEM target cancer risk level of 1×10^{-5} . Trichloroethene is the primary risk driver for both residential and industrial cancer risks.

5.0 Uncertainty Analysis

The results of the vapor intrusion evaluation are subject to the following sources of uncertainty:

- As reported in the *Human Health Risk Evaluation for Construction Equipment Department, Former Naval Construction Battalion Center Davisville, North Kingston, Rhode Island* (Tetra Tech, 2014), shallow well MW02-10S had a historical detection of naphthalene (32.4 ug/L). This most recent historical naphthalene concentration of 32.4 ug/L exceeds the current VISL of 4.6 ug/L. However, the naphthalene concentration detected in well MW02-10S during the current sampling round (2.8 ug/L) does not exceed the current VISL. Therefore, naphthalene was not selected as a COPC for vapor intrusion in this quantitative vapor intrusion evaluation. The fact that historical concentrations of naphthalene were greater than the current concentration indicates that contaminant concentrations may be attenuating over time.
- Intermediate groundwater data (from the Drum Removal Area) were evaluated for purposes of completeness. However, it is expected that shallow groundwater data are more representative of potential vapor intrusion sources. Additionally, the intermediate groundwater data are likely more representative of off-site sources of contamination, as a VOC plume emanating primarily from an upgradient USACE source area underlies soil at the CED Area.
- No COPC selection criteria or surrogate inhalation toxicity criteria were available for cis-1,2-dichloroethene, trans-1,2-dichloroethene, or methyl cyclohexane. However, as discussed in Section 3.0 of the main report, the VOC contamination detected in the shallow groundwater

monitoring at Sites 02/03 (i.e., the fuel related contamination) appears to be attenuating over time. Additionally, screening levels and toxicity criteria are available for the more toxic chlorinated volatile organic compounds (CVOCs) detected in Drum Removal Area wells. Therefore, risk assessment results are not significantly impacted by the lack of criteria.

- Groundwater data included in this vapor intrusion evaluation were also compared to federal Maximum Contaminant Levels (MCLs) (USEPA, 2012) as part of the direct contact evaluation Sites 02 and 03 groundwater (Table A-1.1, Attachment A-1) and Drum Removal Area groundwater (Tables A-3.3 and A-3.4, Attachment A-3). As shown on Table A-1.1 of Attachment A-1, no concentrations in Site 02 and 03 shallow groundwater exceed MCLs. Similarly, Table A-3.3 of Attachment A-3 shows that no concentrations detected in Drum Removal Area shallow groundwater exceed MCLs. For Drum Removal Area intermediate groundwater, the following VOCs were detected at concentrations exceeding MCLs (Table A-3.4 of Attachment A-3):

Chemical	Maximum Concentration (ug/L)	MCL (ug/L)
1,1,2-Trichloroethane	5.6	5
Cis-1,2-Dichloroethene	100	70
Trichloroethene	170	5
Vinyl Chloride	2.4	2

As noted above (2nd bullet), uncertainty is associated with the intermediate groundwater data set.

6.0 Summary and Conclusions

The evaluation of vapor intrusion compared concentrations of VOCs detected in 2014 from shallow-depth groundwater wells at Sites 02/03 as well as shallow- and intermediate-depth groundwater wells at the Drum Removal Area to determine if there would be unacceptable risks associated with vapor intrusion into hypothetical future buildings within the study area. However, VOC results for the intermediate-depth wells do not represent water-table concentrations, the most appropriate concentrations to evaluate in a vapor intrusion analysis.

The chemicals (for the Drum Removal Area shallow- and intermediate-depth groundwater) exceeding screening criteria were further evaluated using the VISL calculator. (No chemicals were detected at concentrations exceeding vapor intrusion screening criteria in the Sites 02/03 shallow groundwater data set.)

No unacceptable risks or hazards were estimated for Drum Removal Area shallow groundwater. For Drum Removal Area intermediate groundwater, total HIs for residential and industrial exposures exceeded 1 on a target organ basis due to trichloroethene. The ILCRs for Drum Removal Area intermediate groundwater exceeded the USEPA target risk range and RIDEM target cancer risk level for residential exposures and exceeded the RIDEM target cancer risk level only for industrial exposures due to trichloroethene. However, VOCs in the shallow groundwater are expected to be more representative of potential vapor intrusion sources than intermediate groundwater, and upgradient sources (i.e., the Nike site) are likely the predominant source of VOCs detected in the intermediate groundwater.

Detected concentrations are presented in bold font. Concentrations exceeding the USEPA VISL are shaded yellow.

Footnotes:

1 - Calculated using USEPA's Vapor Intrusion Screening Level (VISL) calculator Version 3.3, May 2014 RSLs. Values correspond to a target cancer risk level of 1E-06 for carcinogens (C) or hazard quotient (HQ) of 1 for noncarcinogens (N) and an attenuation factor of 0.001.

Definitions:

NA = Not applicable/not available

Qualifiers:

J = Estimated value.

U = Non-detected value.

UJ = Non-detected result is estimated.

Detected concentrations are presented in bold font. Concentrations exceeding the USEPA MBL are shaded yellow.

Footnotes:

1 - Calculated using USEPA's Vapor Intrusion Screening Level (VIBL) calculator Version 3.3, May 2014 R8Lx. Values correspond to a target cancer risk level of 1E-06 for carcinogens (C) or hazard quotient (HQ) of 1 for noncarcinogens (N) and an attenuation factor of 0.001.

Definitions:

C = Carcinogen
NA = Not applicable/not available

Qualifiers:

J = Estimated value.
U = Non-detected value.

Footnotes:

- 1 - Sample and duplicate are considered as two separate samples when determining the minimum and maximum concentrations.
 - 2 - Values presented are sample-specific quantitation limits.
 - 3 - The maximum detected concentration is used for screening purposes.
 - 4 - The range of concentrations from wells MW01-10S, MW01-13S, and MW01-14S is presented.
 - 5 - Calculated using USEPA's Vapor Intrusion Screening Level (VISL) calculator Version 3.3, May 2014 RSLs. Values correspond to a target cancer risk level of 1E-06 for carcinogens (C) or hazard quotient (HQ) of 0.1 for noncarcinogens (N) and an attenuation factor of 0.001.
 - 6 - The chemical is selected as a COPC if the maximum detected concentration exceeds the risk-based COPC screening level.
- Shaded criterion indicates that the maximum detected concentration exceeds one or more screening criteria. Shaded chemical name indicates that the chemical was retained as a COPC.

Definitions:

- ARAR/TBC = Applicable or Relevant and Appropriate Requirements To Be Considered
C = Carcinogen
COPC = Chemical Of Potential Concern
J = Estimated value
N = Noncarcinogen
NA = Not Applicable/Not Available

Rationale Codes:

- For selection as a COPC:
ASL = Above Screening Level

- For elimination as a COPC:
BSL = Below COPC Screening Level
NUT = Essential nutrient
NTX = No toxicity criteria

Exposure Point	CAS Number	Chemical	Minimum Concentration ⁽¹⁾	Maximum Concentration ⁽¹⁾	Units	Sample of Maximum Concentration	Frequency of Detection	Range of Nondetects ⁽²⁾	Concentration Used for Screening ⁽³⁾	Range of Background Concentrations ⁽⁴⁾	EPA Residential VISL ⁽⁵⁾	Potential ARAR/TBC	Potential ARAR/TBC Source	COPC Flag	Rationale for Contaminant Deletion or Selection ⁽⁶⁾
----------------	------------	----------	--------------------------------------	--------------------------------------	-------	---------------------------------	------------------------	------------------------------------	---	---	-------------------------------------	--------------------	---------------------------	-----------	--

Footnotes:

- 1 - Sample and duplicate are considered as two separate samples when determining the minimum and maximum concentrations.
- 2 - Values presented are sample-specific quantitation limits.
- 3 - The maximum detected concentration is used for screening purposes.
- 4 - No background data are available for Drum Removal Area groundwater.
- 5 - Calculated using USEPA's Vapor Intrusion Screening Level (VISL) calculator Version 3.3, May 2014 RSLs. Values correspond to a target cancer risk level of 1E-06 for carcinogens (C) or hazard quotient (HQ) of 0.1 for noncarcinogens (N) and an attenuation factor of 0.001.
- 6 - The chemical is selected as a COPC if the maximum detected concentration exceeds the risk-based COPC screening level. Shaded criterion indicates that the maximum detected concentration exceeds one or more screening criteria. Shaded chemical name indicates that the chemical was retained as a COPC.

Associated Samples:

- MW03-15S-NWG-100114
- MW03-16S-NWG-100614
- MW03-17S-NWG-093014
- MW03-17S-NWG-093014-D

Definitions:

- ARAR/TBC = Applicable or Relevant and Appropriate Requirements To Be Considered
- C = Carcinogen
- COPC = Chemical Of Potential Concern
- J = Estimated value
- N = Noncarcinogen
- NA = Not Applicable/Not Available

Rationale Codes:

- For selection as a COPC:
 - ASL = Above Screening Level
- For elimination as a COPC:
 - BSL = Below COPC Screening Level
 - NUT = Essential nutrient
 - NTX = No toxicity criteria

ATTACHMENT A-3

**CHARACTERIZATION OF GROUNDWATER AND SOILS AT CED AREA DRUM
REMOVAL AREA**

ATTACHMENT A-3

CHARACTERIZATION OF GROUNDWATER AND SOILS AT CED AREA DRUM REMOVAL AREA CONSTRUCTION EQUIPMENT DEPARTMENT AREA FORMER NCBC DAVISVILLE, NORTH KINGSTOWN, RHODE ISLAND

1.0 Introduction

This human health risk assessment (HHRA) for the Construction Equipment Department (CED) Area Drum Removal Area evaluates risks to potential human receptors exposed through direct contact (i.e., incidental ingestion, dermal contact, and inhalation) with soil and groundwater under current and hypothetical future land use scenarios. The Drum Removal Area is located in the northwestern corner of the CED Area (Figure 1-2 of the main report). In April 2013, the Quonset Development Corporation (QDC) discovered several drums while performing routine grading and bolder removal in this undeveloped portion of the CED Area. In June 2013, a geophysical survey was conducted to assess the extent of buried drums for removal consideration. In October 2013, the Navy removed nine drums and metallic debris from the area, and subsurface soil samples (2.5 to 4 feet below ground surface (bgs)) were collected from beneath the former location of the drums and the immediate vicinity. In September/October 2014, shallow (approximately 20 feet bgs) and intermediate (50 feet bgs) groundwater samples were collected from the CED Area Drum Removal Area monitoring wells. Soil and groundwater sampling locations for the Drum Removal Area are displayed on Figure A-3.1.

United States Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs) or calculated risk-based concentrations (RBCs) incorporating site-specific exposure assumptions were used to develop risk estimates based on the risk-ratio approach demonstrated in Section 5. The risk-ratio approach is a simple, efficient approach that allows for the quick of assessment of a multiple data sets or scenarios.

All HHRA consist of four components: selection of chemicals of potential concern (COPCs), exposure assessment, toxicity assessment, and risk characterization. Sections 2 through 5 contain detailed discussions of the four components of this HHRA.

2.0 Selection of COPCs

COPC selection was performed for each medium evaluated (Tables A-3.1 through A-3.4). COPCs were selected by comparing maximum site concentrations to applicable screening criteria. For soil, screening criteria were based on USEPA RSLs for residential soil (USEPA, 2015) and Rhode Island Department of Environmental Management (RIDEM) Direct Exposure Criteria (RIDEM, 2011). For groundwater, screening criteria were based on USEPA RSLs for tap water (USEPA, 2015), USEPA Maximum Contaminant Levels (MCLs) (USEPA, 2012), and RIDEM GA and GB Groundwater Objectives (RIDEM, 2011). COPCs were selected based on the lowest screening level derived from these criteria. The screening concentrations based on the RSLs correspond to a systemic hazard quotient (HQ) of 0.1 for noncarcinogens or an incremental lifetime cancer risk (ILCR) of 1×10^{-6} for carcinogens. The noncarcinogenic RSLs represent an HQ of 0.1 to account for the potential cumulative effects of several chemicals affecting the same target organ or producing the same adverse noncarcinogenic effect.

Soil results were additionally compared to generic federal risk-based soil screening levels (SSLs) for groundwater protection designed to be protective of groundwater at most sites (as published in the USEPA RSL table). These groundwater protection SSLs allow an initial qualitative evaluation of the potential for chemical migration from soil to groundwater. Chemicals with concentrations exceeding the SSLs may potentially migrate from the soil to groundwater in sufficient quantities to pose groundwater quality problems.

Screening criteria for trivalent chromium were used to evaluate total chromium data in the HHRA because historical site activities for the CED Area do not suggest that hexavalent chromium would be a significant contaminant at any sites in the investigation area.

No formal site-specific background data sets are available for the soil or groundwater samples from the CED Area Drum Removal Area. For soil, site concentrations were compared to NCBC Davisville background values for comparison purposes only; chemicals detected in soil were not eliminated from COPC selection on the basis of background comparisons. For groundwater at Sites 02/03, chemical concentrations detected in upgradient wells (MW01-10S, MW01-13S, and MW01-14S) were considered for use in eliminating chemicals from COPC selection; however, due to uncertainty associated with the upgradient concentrations because a formal background data set has not been approved, if any chemicals are eliminated from COPC selection due to upgradient concentrations, groundwater risks were calculated both 1) excluding chemicals detected at concentrations greater than screening levels but less than upgradient concentrations, and 2) including all chemicals detected at concentrations greater than screening levels. Uncertainty associated with the lack of a formal background data set for both soil and groundwater is further discussed in Section 6.

The following COPCs were selected for each medium (Tables A-3.1 through A-3.4):

- **Direct Contact with Subsurface Soil:**
 - Metals: aluminum, cobalt, iron, and manganese.

- **Migration from Subsurface Soil to Groundwater:**
 - Volatiles: cis-1,2-dichloroethene and trichloroethene.
 - PCBs: Aroclor-1260.
 - Metals: antimony, cobalt, iron, lead, manganese, selenium, and silver.
 - Miscellaneous parameters: cyanide.

- **Direct Contact with Shallow Groundwater:**
 - Volatiles: trichloroethene
 - Metals: cobalt and manganese

- **Direct Contact with Intermediate Groundwater:**
 - Volatiles: 1,1,2,2-tetrachloroethane, 1,1,2-trichloroethane, cis-1,2-dichloroethene, trans-1,2-dichloroethene, trichloroethene, and vinyl chloride
 - Metals: cobalt, iron, and manganese

The maximum detected arsenic concentration in soil exceeds the toxicity screening levels, but all arsenic concentrations were less than the RIDEM Method 1 Direct Exposure Criterion for arsenic of 7.0 mg/kg, which is based on the 95-percent upper confidence limit of natural background across the state (RIDEM, 2011). Consequently, arsenic was not selected as a COPC for soil.

The COPCs for direct contact are further evaluated in the risk ratio tables presented in Section 5. COPCs for migration from soil to groundwater are qualitatively evaluated in Section 5. Groundwater results were also screened against criteria for vapor intrusion as part of the vapor intrusion evaluation (Attachment A-2).

3.0 Exposure Assessment

Current and future anticipated land use at the CED Area is industrial/commercial. There are no plans for the future residential development of the CED Area; residential receptors were included primarily to support risk-management decisions. Receptors evaluated in this HHRA are current and future

construction workers, future industrial workers, future recreational users (child, adult, and lifelong) and hypothetical future residents (child, adult, and lifelong).

All receptors were evaluated for exposures to soil at the site. Construction workers, industrial workers, recreational users, and hypothetical residents may be exposed to COPCs in soil via direct contact (i.e., incidental ingestion, dermal contact, and inhalation of volatiles/fugitive dust). All of these receptors were evaluated for exposures to subsurface soil; however, the construction worker is the only receptor likely to contact subsurface soil as part of excavation activities. Industrial workers, recreational users, and hypothetical residents would only contact subsurface soil if future excavation activities brought subsurface soil to the surface. The evaluation of industrial worker, recreational user, and hypothetical resident contact with subsurface soil is included in this HHRA to support risk-management decisions.

Three receptors were also evaluated for exposures to groundwater at the site. Construction workers could potentially be exposed to groundwater if present in trenches during excavation activities via incidental ingestion, dermal contact, or inhalation of VOCs. In addition, the hypothetical future resident could potentially be exposed to contaminants in groundwater via ingestion, dermal contact, and inhalation (i.e., showering/bathing), and indoor air (vapor intrusion) (see Attachment A-2 for vapor intrusion evaluation). Industrial workers could also potentially be exposed via inhalation to VOCs migrating from groundwater into indoor air (vapor intrusion) (evaluated in Attachment A-2). Recreational users are not expected to contact groundwater at the site.

Industrial worker and residential exposures were evaluated using current USEPA RSLs (USEPA, 2015). The methodology USEPA used to calculate the RSLs is based on default USEPA exposure assumptions and presented in the User Guide accompanying the January 2015 RSL table. Exposure assumptions for industrial worker and residential receptors are summarized in Table A-4.1 (Attachment A-4). For residents, carcinogenic RSLs represent lifelong (child + adult) exposures and non-carcinogenic RSLs represent child exposures to evaluate the most conservative receptors.

To evaluate construction worker and recreational exposures, RBCs representing a 1E-06 cancer risk level and an HQ of 1 (i.e., the no-adverse-effect concentration) were developed for carcinogens and non-carcinogens, respectively. RBCs for construction worker and recreational user direct contact (incidental ingestion, dermal contact, and inhalation) exposures with soil were calculated using methodology similar to that used by USEPA to develop the RSLs. The methodology and exposure assumptions used to calculate RBCs for construction workers and recreational users are presented in Attachment A-5 of this report. Exposure assumptions for soil developed in the *Human Health Risk Evaluation for Construction Equipment Department, Former Naval Construction Battalion Center Davisville, North Kingston, Rhode Island* (Tetra Tech, 2014) were updated to reflect current guidance (e.g., USEPA, 2014) and used to

calculate RBCs for the CED Area Drum Removal Area. Exposure assumptions for groundwater are based on current USEPA guidance (e.g., USEPA, 2014). Exposure assumptions for construction workers and recreational users are also summarized in Table A-4.1 (Attachment A-4). RBCs were calculated for construction workers and child, adult, and lifelong recreational users exposed to soil and construction workers exposed to groundwater.

All available subsurface soil data, collected between 2.5 and 4 feet bgs, were evaluated as a single data set. Groundwater data collected from shallow (approximately 20 feet bgs) and intermediate (50 feet bgs) were evaluated separately due to differences in concentrations detected (generally, higher concentrations were noted in intermediate groundwater) as well as potential exposures (construction workers are more likely to contact shallow groundwater).

The exposure point concentration (EPC) is defined as the concentration to which a receptor is exposed. In this HHRA, the 95-percent upper confidence limit (95% UCL) on the arithmetic mean was evaluated as the EPC for each data set, when appropriate. The maximum detected concentration was used as the EPC if there were an insufficient number of samples (i.e., less than five), as was the case for both the shallow and intermediate groundwater data sets with three samples each.

EPCs were calculated following USEPA's Calculating Upper Confidence Limits for Exposure Point Concentrations at Hazardous Waste Sites (USEPA, 2002) and using USEPA's ProUCL software Version 5.0.00 (USEPA, 2013). If ProUCL was unable to calculate a 95% UCL, then the maximum detected concentration was used as the EPC. Non-detected values were evaluated in accordance with the ProUCL guidance. EPCs for all data sets evaluated in this HHRA are presented in the risk-ratio tables described in Section 5. ProUCL outputs for all data sets evaluated in this HHRA are included at the end of this attachment.

4.0 Toxicity Assessment

The toxicity values used to calculate the RBCs are identified in Tables A-5.1 through A-5.4 in Attachment A-5 and are those values published in the January 2015 USEPA RSL table (USEPA, 2015).

5.0 Results of the Risk Characterization

Risk estimates were calculated using a simple risk-ratio methodology and the RBCs. The RBCs for receptor exposures to soil and groundwater represent, in effect, an HQ of 1 (i.e., the no-adverse-effect concentration) for non-carcinogens and a 1×10^{-6} target cancer risk level for carcinogens. Cancer and

non-cancer risk estimates were developed using the risk-ratio technique demonstrated in the following formula:

$$\frac{\text{RBC for Receptor}}{\text{EPC for Chemical}} = \frac{\text{TargetHQ of 1 or TargetCancerRisk Estimate of } 1\text{E}-06}{\text{HQ or CancerRisk Estimate}}$$

Solving this equation for HQ or cancer risk yields:

$$\text{HQ or CancerRisk Estimate} = \frac{\text{EPC for Chemical} \times \text{TargetHQ of 1 or TargetCancerRisk Estimate of } 1\text{E}-06}{\text{RBC for Receptor}}$$

The following example calculations are provided for exposure to the maximum concentration of trichloroethene in the shallow groundwater data set (see Table A-3.10):

$$\text{Cancer risk estimate} = \frac{3.7 \times 1\text{E}-06}{0.49} = 7.6\text{E}-06$$

$$\text{HQ} = \frac{3.7 \times 1}{2.8} = 1.3$$

A hazard index (HI) was generated by summing the individual HQs for all chemicals. The HI is not a mathematical prediction of the severity of toxic effects, and therefore is not a true "risk"; it is simply a numerical indicator of the possibility of the occurrence of noncarcinogenic (threshold) effects. Calculated cancer risks were interpreted primarily using the USEPA's "target risk range" (1×10^{-6} to 1×10^{-4}) and the State of Rhode Island cancer risk benchmark of 1×10^{-5} (as a point of reference), and HIs were interpreted using a value of 1 (i.e., the no-adverse-effect level). If an HI exceeds unity, a segregation of target organ effects associated with exposure to the chemicals evaluated is typically performed. Only those chemicals that affect the same target organ(s) or exhibit similar critical effect(s) are regarded as truly additive. Consequently, it may be possible for a cumulative HI to exceed 1, but no adverse health effects are anticipated if the chemicals evaluated do not affect the same target organ or exhibit the same critical effect. The results of risk-ratio evaluations are presented in Tables A-3.5 through A-3.11. A summary of the results of the risk-ratio evaluations is provided below.

Summary of Cancer and Non-Cancer Risk Estimates and Risk Contributors⁽¹⁾ for Receptor Direct Contact with Subsurface Soil or Groundwater

Table Number	Data Set Evaluated	Receptor	Risk Estimates ⁽²⁾⁽³⁾	
			Cancer Risk Estimate	Hazard Index
A-3.5	Subsurface soil	Construction Worker	$2 \times 10^{-7} / 9 \times 10^{-8}$	0.7 / 0.7
A-3.7		Industrial Worker	$9 \times 10^{-7} / 4 \times 10^{-9}$	0.06 / 0.06
A-3.8		Recreational User ⁽⁴⁾	$7 \times 10^{-7} / 1 \times 10^{-10}$	0.1 / 0.1
A-3.9		Hypothetical Resident ⁽⁴⁾	$4 \times 10^{-6} / 2 \times 10^{-8}$	1 / 0.9
A-3.6	Shallow groundwater	Construction Worker	7×10^{-7}	0.4
A-3.10		Hypothetical Resident ⁽⁴⁾	8×10^{-6}	3⁽⁵⁾
A-3.11	Intermediate groundwater	Hypothetical Resident ⁽⁴⁾	1×10^{-3} (1,1,2,2-PCA, 1,1,2-TCA, TCE, VC)	82 (1,1,2-TCA, cis-1,2-DCE, TCE, Co)

- 1 A noncarcinogenic risk contributor is a chemical that contributes substantially (i.e., greater than an HQ of 0.1) to a target organ-specific HI that exceeds 1. A carcinogenic risk contributor is a chemical with a calculated cancer risk estimate exceeding 1×10^{-6} when the medium-specific total cancer risk for the receptor exceeds 1×10^{-5} .
- 2 Italicized carcinogenic risk estimates exceed the State of Rhode Island cancer risk limit of 1×10^{-5} . Bolded carcinogenic risk estimates exceed USEPA's target cancer risk range of 1×10^{-6} to 1×10^{-4} . Bolded HIs exceed the target level of 1. A chemical name presented in parentheses indicates the primary chemical driving risk.
- 3 Cancer risks and hazard indices are presented two ways: 1) with arsenic (for information purposes only), (2) without arsenic. As noted above, arsenic was not selected as a COPC. Risk estimates including arsenic are included at the end of this attachment.
- 4 The cancer risk and HI presented for the recreational user are for the lifelong recreational user and child recreational user (i.e., the most conservative recreational user receptors), respectively. The cancer risk and HI presented for the hypothetical resident are for the lifelong resident and child resident (i.e., the most conservative receptors), respectively.
- 5 Target organ HIs are equal to 1.

Definitions: 1,1,2,2-PCA = 1,1,2,2-Tetrachloroethane; 1,1,2-TCA = 1,1,2-Trichloroethane; cis-1,2-DCE = cis-1,2-Dichloroethene; TCE = Trichloroethene; VC = Vinyl Chloride; Co = Cobalt

As shown in the summary table, all HIs for subsurface soil and the HI for construction workers exposed to shallow groundwater are less than the target level of 1. The HI for residential exposure to shallow groundwater (HI = 3) exceeds 1, but target-organ specific HIs do not exceed 1. Therefore, no adverse noncarcinogenic effects are expected for exposures to subsurface soil or shallow groundwater. Summing construction worker HIs for subsurface soil (HI = 0.7) and shallow groundwater (HI = 0.4) to represent the cumulative risk associated with exposure to both of these media results in an HI less than 1. Summing industrial worker HIs for subsurface soil (HI = 0.06) and vapor intrusion from shallow groundwater (HI = 0.2) (Attachment A-2) to represent the cumulative risk associated with exposure to

both of these media results in an HI less than 1. Summing residential HIs for exposures to subsurface soil (HI = 0.9), shallow groundwater (HI = 3), and vapor intrusion from shallow groundwater (HI = 0.7) (Attachment A-2) to represent the cumulative risk associated with exposure to these media result in an HI greater than 1, and target organ HIs for the thyroid (HI = 2 due to cobalt) and cardiovascular system, fetotoxicity, and immune system (HIs = 2 due to trichloroethene) exceed 1. It should be noted that the maximum concentration of these chemicals were used as the EPC, which results in added uncertainty. Additionally, uncertainty is associated with the toxicity criteria used for cobalt. Section 5 discusses uncertainty associated with the HIs presented.

The HI for intermediate groundwater, estimated for hypothetical residents only, exceeds 1 (HI = 82). Target organ HIs for the kidney (HI = 3), cardiovascular system, fetotoxicity, and immune system (HI = 61), thyroid (HI = 3), and whole body (HI = 14) exceeded 1. Primary contributors to the HI exceedances are 1,1,2-trichloroethane, cis-1,2-dichloroethene, trichloroethene, and cobalt. Cumulative HIs for residential exposures to subsurface soil, intermediate groundwater, and vapor intrusion therefore also exceed 1. As stated previously, uncertainty is associated with the intermediate groundwater data set and is discussed in Section 5.

Cancer risk estimates for all subsurface soil and shallow groundwater evaluations are less than or within the USEPA's target cancer risk range of 1×10^{-6} to 1×10^{-4} and less than the State of Rhode Island cancer risk benchmark of 1×10^{-5} . Summing construction worker cancer risks for subsurface soil (ILCR = 9×10^{-8}) and shallow groundwater (ILCR = 7×10^{-7}) to represent the cumulative risk associated with exposure to both of these media results in an ILCR less than USEPA's target cancer risk range and less than the State of Rhode Island cancer risk benchmark. Summing industrial worker cancer risks for subsurface soil (ILCR = 4×10^{-9}) and vapor intrusion from shallow groundwater (ILCR = 5×10^{-7}) (Attachment A-2) to represent the cumulative risk associated with exposure to both of these media results in an ILCR less than USEPA's target cancer risk range and less than the State of Rhode Island cancer risk benchmark. Summing residential cancer risks for exposures to subsurface soil (ILCR = 2×10^{-8}), shallow groundwater (ILCR = 8×10^{-6}), and vapor intrusion (ILCR = 3×10^{-6}) (Attachment A-2) to represent the cumulative risk associated with exposure to these media results in an ILCR within USEPA's target risk range and equal to but not exceeding the State of Rhode Island cancer risk benchmark. Therefore, no risk drivers were identified based on cancer risk estimates under the defined exposure scenarios for subsurface soil and shallow groundwater.

The cancer risk for intermediate groundwater (ILCR = 1×10^{-3}), estimated for hypothetical residents only, exceeds USEPA's target cancer risk range of 1×10^{-6} to 1×10^{-4} and Rhode Island's target cancer risk level of 1×10^{-5} . 1,1,2,2-Tetrachloroethane, 1,1,2-trichloroethane, trichloroethene, and vinyl chloride are the primary risk contributors to the cancer risks. Cumulative cancer risks for residential exposures to

subsurface soil, intermediate groundwater, and vapor intrusion from intermediate groundwater (Attachment A-2) therefore also exceed USEPA's target cancer risk range and the State of Rhode Island target cancer risk benchmark. As stated previously, uncertainty is associated with the intermediate groundwater data set and is discussed in Section 5.

As noted in Section 2, the following analytes were selected as COPCs for migration from subsurface soil to groundwater:

- Volatiles: cis-1,2-dichloroethene and trichloroethene.
- PCBs: Aroclor-1260.
- Metals: antimony, cobalt, iron, lead, manganese, selenium, and silver.
- Miscellaneous parameters: cyanide.

Of the COPCs for migration to groundwater, Aroclor-1260, lead, and selenium were not detected in groundwater from the Drum Removal Area wells, and the metals antimony and silver were not selected as groundwater COPCs. Therefore, the groundwater data do not indicate that these COPCs have negatively influenced groundwater quality. Iron was selected as a COPC in shallow groundwater (but not detected in intermediate groundwater), and cobalt and manganese were selected as COPCs in both shallow and intermediate groundwater. The maximum concentrations of iron and manganese in groundwater exceed RSLs based on HQs of 0.1 but are less than RSLs based on HQs of 1. Therefore, groundwater data do not indicate that iron and manganese concentrations in soil have negatively impacted groundwater quality. The concentration of cobalt in shallow groundwater (detected in 1 of 3 samples, concentration = 7.6 ug/L) slightly exceeds the tap water RSL based on an HQ of 1 (6 ug/L); cobalt concentrations in intermediate groundwater are greater (maximum = 16.7 ug/L) and exceed the tap water RSL based on an HQ of 1. However, shallow groundwater concentrations are likely more representative of any leaching that has occurred. Additionally, uncertainty is associated with toxicity criteria for cobalt, and cobalt would not be a COPC if revised criteria were used (see Section 6). Based on these considerations, the groundwater data do not indicate cobalt concentrations in soil have negatively impacted groundwater quality. Cyanide was not a target analyte for the groundwater samples. Although subsurface soil concentrations of cyanide (maximum = 0.195 mg/kg) exceed the risk-based SSL (0.015 mg/kg), they do not exceed the MCL-based SSL (2 mg/kg). Therefore, cyanide concentrations in soil are not expected to negatively affect groundwater quality. The volatiles cis-1,2-dichloroethene and trichloroethene were both detected in shallow and intermediate groundwater samples; however, cis-1,2-dichloroethene was not selected as a groundwater COPC for the shallow-zone samples, and the maximum concentration of trichloroethene in shallow groundwater is less than the MCL and RIDEM GA objective. Additionally, the maximum concentration of cis-1,2-dichloroethene in subsurface soil is less than the MCL-based SSL, and the maximum concentrations of both cis-1,2-dichloroethene and trichloroethene in subsurface soil are

less than the RIDEM GA leachability criteria. Based on these considerations, subsurface soil concentrations of cis-1,2-dichloroethene and trichloroethene are not expected to negatively impact groundwater quality. As noted previously, intermediate-zone groundwater concentrations of volatiles, including cis-1,2-dichloroethene and trichloroethene, are greater than shallow-zone concentrations of volatiles, and uncertainty associated with the intermediate groundwater data set is discussed in Section 5. With regards to migration from soil to groundwater, shallow groundwater concentrations are likely more representative of any leaching that has occurred.

6.0 Uncertainty Analysis

The following sources of uncertainty should be considered when interpreting the results of the risk evaluations:

- No formal site-specific background data sets are available for the soil or groundwater samples from the CED Area Drum Removal Area. For soil, site concentrations were compared to NCBC Davisville background values for comparison purposes only; chemicals detected in soil were not eliminated from COPC selection on the basis of background comparisons. For groundwater at Sites 02/03, chemical concentrations detected in upgradient wells (MW01-10S, MW01-13S, and MW01-14S) were considered for use in eliminating chemicals from COPC selection. However, chemicals detected at concentrations greater than screening levels in subsurface soil and groundwater were also detected at concentrations greater than background or upgradient concentrations. Therefore, results of COPC selection are not affected by whether available background/upgradient concentrations are used to eliminate chemicals from COPC selection. No risk drivers were identified for subsurface soil under the defined exposure scenarios; therefore, risk assessment conclusions are not affected by the lack of a formal background data set for soil. For groundwater, upgradient concentrations were collected to provide background concentrations particularly for metals in groundwater. Of the metals selected as COPCs for groundwater, only cobalt was a risk driver (in intermediate groundwater only). Cobalt is a naturally occurring metal, and cobalt would not be identified as a risk driver if using alternative screening criteria for cobalt to account for the considerable uncertainty associated with the toxicity criteria for cobalt (see last bullet).
- Maximum concentrations were used as EPCs for groundwater exposures estimated in this HHRA because of the small number of samples available (i.e., there were only 3 samples available for the shallow groundwater and intermediate groundwater data sets). As noted previously, using maximum concentrations for EPCs is conservative and likely results in an overestimation of risk because it assumes that a receptor is continually exposed to the greatest concentration reported for a data set.

Consequently, risk estimates calculated using the 95% UCL as the EPC are likely to be more representative of actual exposure conditions.

- Intermediate groundwater data from the Drum Removal Area were evaluated in addition to shallow groundwater data for purposes of completeness. However, the intermediate groundwater data may be more representative of off-site sources of contamination, as a VOC plume emanating primarily from an upgradient United States Army Corps of Engineers (USACE) source area underlies soil at the CED Area.
- For purposes of risk characterization, screening levels were calculated for construction workers and recreational users using toxicity values from the January 2015 USEPA RSL table and exposure assumptions based on USEPA guidance when applicable. Some exposure assumptions (e.g., exposure frequency for construction workers) were based on professional judgment.
- Although the future land use of the CED Area is anticipated to be industrial/commercial or recreational, the residential land use scenario was evaluated in this HHRE primarily to support risk-management decisions. All receptors were evaluated for exposure to subsurface soil; however, the construction worker is the only receptor likely to have direct contact with subsurface soil. Exposure to subsurface soil for receptors other than construction workers would only occur if construction activities brought subsurface soil to the surface. However, subsurface soil exposures were evaluated for all receptors to support risk-management decisions.
- Arsenic concentrations in subsurface soil were less than the RIDEM Method 1 Direct Exposure Criterion for arsenic of 7.0 mg/kg, which is based on the 95-percent upper confidence limit of natural background across the state (RIDEM, 2011); therefore, arsenic was not selected as a COPC. To be conservative, risk estimates including arsenic were presented at the end of this attachment and summarized in Section 4. Medium-specific cancer risks and HIs for subsurface soil do not exceed benchmark levels even when arsenic is included in the calculations. Therefore, overall HHRA conclusions are not affected by whether arsenic is included or excluding in the quantitative HHRA.
- Toxicity criteria are available for different forms of chromium. Hexavalent chromium is considered to be highly toxic versus trivalent chromium. In COPC selection, total chromium was assumed to be present in the trivalent form because it is unlikely that hexavalent chromium is the dominant species in CED Area media. The following table compares EPCs used in the evaluations for total chromium to the corresponding screening criteria (based on an ILCR = 1×10^{-6} or an HQ of 0.1).

EPCs for Chromium	Residential RSLs – Cr III	Residential RSLs – Cr VI
Subsurface Soil (mg/kg)		
Maximum = 24.9	Noncancer: 12,000 Cancer: Not Applicable	Noncancer: 23 Cancer: 0.30
Shallow Groundwater (ug/L)		
Maximum = 1 (total) Maximum = 1.1 (dissolved)	Noncancer: 2,200 Cancer: Not Applicable	Noncancer: 4.4 Cancer: 0.035
Intermediate Groundwater (ug/L)		
Maximum = 1.4 (total) Maximum = 1 (dissolved)	Noncancer: 2,200 Cancer: Not Applicable	Noncancer: 4.4 Cancer: 0.035

If the screening criteria for hexavalent chromium had been used for COPC selection, chromium would have been selected as a COPC for both soil and groundwater data sets. However, as stated previously, it is unlikely that hexavalent chromium is the dominant species in CED Area media.

- Cobalt was selected as a COPC for soil and groundwater data sets based on exceedances of USEPA RSLs. Uncertainty is associated with selecting cobalt as a COPC because cobalt is a naturally-occurring metal and the conservative screening levels (based on USEPA criteria) are likely to be less than background levels of cobalt expected at some sites. For example, the Maryland Department of the Environment (MDE) selected revised criteria for cobalt of 50 mg/kg for soil and 100 ug/L for groundwater based on Agency for Toxic Substances and Disease Registry (ATSDR) toxicity values (MDE, 2013). These MDE values for cobalt are considerably greater than the current USEPA cobalt RSLs for residential soil (23 mg/kg) and groundwater (6 ug/L). Cobalt would not have been selected as a COPC for soil or groundwater at the Drum Removal Area if the MDE values for cobalt were used for COPC selection instead of the USEPA RSLs. Additionally, cobalt concentrations in intermediate groundwater exceeded those in shallow groundwater. Cobalt was not selected as a risk driver for shallow groundwater, and shallow groundwater concentrations are likely more representative of site-related contamination.

7.0 Summary and Conclusions

The HHRA for the CED Area Drum Removal Area evaluated potential risks and hazards for exposures to subsurface soil, shallow-zone groundwater, and intermediate-zone groundwater. Subsurface samples collected in October 2013 and groundwater samples collected in September/October 2014 were used in the HHRA and were compared to conservative screening levels for direct contact exposures and, for soil, risk-based screening levels for migration to groundwater. Vapor intrusion exposures for groundwater were evaluated separately (see Attachment A-2). Screening criteria for trivalent chromium were used to evaluate total chromium data in the HHRA because historical site activities for the CED Area do not

suggest that hexavalent chromium would be a significant contaminant at any sites in the investigation area.

Risk drivers for direct contact exposures are presented below.

Environmental Medium	Receptors Evaluated	Risk Drivers
Subsurface Soil	Construction Worker, Industrial Worker, Recreational User, Hypothetical Resident	None
Shallow Groundwater	Construction Worker, Hypothetical Resident	None
Intermediate Groundwater ⁽¹⁾	Hypothetical Resident	1,1,2,2-tetrachloroethane, 1,1,2-trichloroethane, cis-1,2-dichloroethene, trichloroethene, vinyl chloride, cobalt ⁽²⁾

- 1 Intermediate groundwater samples (collected 50 feet bgs) may be more representative of off-site contamination sources than site-specific contamination.
- 2 Cobalt would not be identified as a COPC or a risk driver if revised criteria for cobalt from MDE (2013) had been used for COPC selection.

No unacceptable medium-specific risks or risk drivers were selected for subsurface soil or shallow groundwater based on the HHRA; therefore, no chemicals of concern (COCs) are selected for these media. Although unacceptable risks and risk drivers were identified for intermediate groundwater, the intermediate groundwater samples likely are more representative of off-site contamination than site-specific contamination. Thus, the risk drivers (COCs) identified above for the intermediate groundwater are not selected as COCs for the Drum Removal Area.

Footnotes:
 1 - Sample and duplicate are considered as two separate samples when determining the minimum and maximum concentrations.
 2 - Values presented are sample-specific quantitation limits.
 3 - The maximum detected concentration is used for screening purposes.

Definitions:
 C = Carcinogen
 COPC = Chemical of potential concern
 J = Estimated value

TABLE A-3.1
OCCURRENCE, DISTRIBUTION, AND SELECTION OF CHEMICALS OF POTENTIAL CONCERN - DIRECT CONTACT WITH SUBSURFACE SOIL
HUMAN HEALTH RISK ASSESSMENT - CED AREA DRUM REMOVAL AREA
FORMER NCBC DAVISVILLE
NORTH KINGSTOWN, RHODE ISLAND
 PAGE 2 OF 2

Scenario Timeframe: Current/Future Medium: Subsurface Soil Exposure Medium: Subsurface Soil

Exposure Point	CAS Number	Chemical	Minimum Concentration ⁽⁴⁾	Maximum Concentration ⁽⁴⁾	Units	Sample of Maximum Concentration	Frequency of Detection	Range of Nondetects ⁽⁵⁾	Concentration Used for Screening ⁽⁶⁾	NCBC Davisville Background Value ⁽⁴⁾	USEPA RSL Residential ⁽⁶⁾	RIDEM Direct Contact Criteria Residential ⁽⁶⁾	COPC Flag	Rationale for Contaminant Deletion or Selection ⁽⁷⁾
----------------	------------	----------	--------------------------------------	--------------------------------------	-------	---------------------------------	------------------------	------------------------------------	---	---	--------------------------------------	--	-----------	--

4 - The maximum concentration from the soil background data set is presented for comparison only.

5 - United States Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites, January 2015.

Screening levels are based on a lifetime cancer risk of 1E-06 or a noncancer hazard quotient (HQ) of 0.1.

6 - Rhode Island Department of Environmental Management (RIDEM), DEM-DSR-01-93, November 2011.

7 - The chemical is selected as a COPC if the maximum detected concentration exceeds the risk-based COPC screening level.

8 - One-tenth the noncarcinogenic value is less than the carcinogenic value; therefore, the noncarcinogenic value is presented.

9 - Value is for total PCBs.

10 - Arsenic concentrations were less than the RIDEM Method 1 Direct Exposure Criterion for arsenic of 7.0 mg/kg, which is based on the 95-percent upper confidence limit of natural background across the state (RIDEM, November 2011). Consequently, arsenic was not selected as a COPC for soil.

11 - Value is for trivalent chromium.

12 - Value is for mercuric chloride (and other mercury salts).

N = Noncarcinogen
 NA = Not applicable/not available
 ND = Not detected

Rationale Codes:

For selection as a COPC:

ASL = Above Screening Level and background

For elimination as a COPC:

BSL = Below screening level

NUT = Essential nutrient

Scenario Timeframe: Current/Future Medium: Subsurface Soil Exposure Medium: Subsurface Soil

Exposure Point	CAS Number	Chemical	Minimum Concentration ⁽¹⁾	Maximum Concentration ⁽¹⁾	Units	Sample of Maximum Concentration	Frequency of Detection	Range of Nondetects ⁽²⁾	Concentration Used for Screening ⁽³⁾	Range of Background Concentrations ⁽⁴⁾	USEPA SSL for Groundwater Protection ⁽⁵⁾	RIDEM GA Leachability Criteria ⁽⁶⁾	COPC Flag	Rationale for Contaminant Deletion or Selection ⁽⁷⁾
----------------	------------	----------	--------------------------------------	--------------------------------------	-------	---------------------------------	------------------------	------------------------------------	---	---	---	---	-----------	--

4 - The maximum concentration from the soil background data set is presented for comparison only.

5 - United States Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites, January 2015.

Protection of groundwater values are risk-based soil screening levels (SSLs) representing a dilution attenuation factor (DAF) of 1.

6 - Rhode Island Department of Environmental Management (RIDEM), DEM-DSR-01-93, November 2011.

7 - The chemical is selected as a COPC if the maximum detected concentration exceeds the risk-based COPC screening level.

8 - Value is for total PCBs.

9 - Arsenic concentrations were less than the RIDEM Method 1 Direct Exposure Criterion for arsenic of 7.0 mg/kg, which is based on the 95-percent upper confidence limit of natural background across the state (RIDEM, November 2011). Consequently, arsenic was not selected as a COPC for soil.

10 - Value is for trivalent chromium.

11 - Value is Maximum Contaminant Level (MCL)-based SSL.

ND = Not detected

Rationale Codes:

For selection as a COPC:

ASL = Above screening level

For elimination as a COPC:

BSL = Below screening level

NUT = Essential nutrient

NTX = No toxicity criteria

Shaded criterion indicates that the maximum detected concentration exceeds one or more screening criteria. Shaded chemical name indicates that the chemical was retained as a COPC.

Footnotes:

- 1 - Sample and duplicate are considered as two separate samples when determining the minimum and maximum concentrations.
 - 2 - Values presented are sample-specific quantitation limits.
 - 3 - The maximum detected concentration is used for screening purposes.
 - 4 - No background data are available for Drum Removal Area groundwater.
 - 5 - USEPA Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites, January 2015. RSLs are based on a lifetime cancer risk of 1E-06 or a noncancer hazard quotient (HQ) of 0.1.
 - 6 - Federal Maximum Contaminant Levels (MCLs), 2012 Edition of the Drinking Water Standards and Health Advisories. Office of Water, Washington, D.C. EPA 822-5-12-001. April.
 - 7 - Rhode Island Department of Environmental Management (RIDEM), DEM-DSR-01-93, November 2011.
 - 8 - The chemical is selected as a COPC if the maximum detected concentration exceeds the risk-based COPC screening level and is greater than upgradient/background concentrations.
 - 9 - One-tenth the noncarcinogenic screening level is less than the carcinogenic screening level; therefore, the noncarcinogenic screening level is presented.
 - 10 - The screening value is for trivalent chromium.
 - 11 - In accordance with USEPA Region I guidance, only total metals groundwater results are used in the risk assessment; dissolved metals results are presented for information purposes only and are not used for COPC selection.
- Shaded criterion indicates that the maximum detected concentration exceeds one or more screening criteria. Shaded chemical name indicates that the chemical was retained as a COPC.

Definitions:

- C = Carcinogen
 COPC = Chemical Of Potential Concern
 J = Estimated value
 N = Noncarcinogen
 NA = Not Applicable/Not Available

Rationale Codes:

- For selection as a COPC:
 ASL = Above Screening Level
- For elimination as a COPC:
 BSL = Below COPC Screening Level
 NUT = Essential nutrient
 Reg. I = USEPA Region I guidance

Associated Samples:

MW03-15S-NWG-100114 MW03-17S-NWG-093014
 MW03-16S-NWG-100614 MW03-17S-NWG-093014-D

<p>Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL. These recommendations are based upon the results of the simulation studies summarized in Singh, Singh, and Iaci (2002) and Singh and Singh (2003). However, simulation results will not cover all Real World data sets. For additional insight the user may want to consult a statistician.</p>			
<p>Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positively skewed data sets.</p>

Notes:

- 1 - Exposure assumptions for this receptor are incorporated into the Regional Screening Levels (RSLs) (USEPA, January 2015) used in the risk ratio evaluation.
- 2 - USEPA, 2002. Calculating Upper Confidence Limits for Exposure Point Concentrations at Hazardous Waste Sites. OSWER 9285.6-10.
- 3 - Professional judgment (e.g., assumes that construction activities take place for 150 days for one year, construction workers have contact with groundwater for 4 hours/day for 30 days/year with an ingestion rate of 0.05 L/day, and recreational users are on-site for four hours per day).
- 4 - USEPA, 2014: Human Health Evaluation Manual, Supplement Guidance, Update of Standard Default Exposure Factors. OSWER 9200.1-120.
- 5 - USEPA, 2002: Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites. OSWER 9365.4-24.
- 6 - Assumes that recreational users visit the site approximately four days per month during the warmer weather months (April through September).
- 7 - Assumes recreational users are at the site only a portion of the day.
- 8 - USEPA, 2004: Risk Assessment Guidance for Superfund (Part E, Supplemental Guidance for Dermal Risk Assessment) Final.
- 9 - Assumes an eight hour workshift.
- 10 - USEPA, 2015: RSL Calculator Internet site at http://epa-prgs.ornl.gov/cgi-bin/chemicals/csl_search. Site-specific values for Hartford, Connecticut.

RISK-BASED CONCENTRATIONS CALCULATIONS

ATTACHMENT A-5

RISK-BASED CONCENTRATION CALCULATION METHODOLOGY

1.0 Incidental Ingestion of Soil

Direct physical contact with soil at the CED Area Drum Removal Area may result in the incidental ingestion of chemicals. Chemical intake for the incidental ingestion of soil is estimated according to standard United States Environmental Protection Agency (USEPA) guidance and the equations presented in the risk-based concentration (RBC) calculation sheets in Attachment A-5.

Most of the exposure assumptions used to estimate chemical intakes from incidental ingestion of soil (and thus to calculate RBCs presented in Attachment A-5) are based on default assumptions described in the standard USEPA guidance and are summarized in the construction worker and recreational user calculation spreadsheets (Attachment A-5). The following paragraph briefly discusses the non-default receptor-specific exposure assumptions for incidental ingestion of soil used in this Human Health Risk Assessment (HHRA).

The selected exposure frequency assumptions consider anticipated receptor activities at the study areas and sites evaluated. It is assumed that construction workers assigned to future excavation projects at the study areas/sites are exposed to soil for 150 days per year for 1 year. It is assumed that recreational users are exposed to soil approximately 4 days per week during the warmer weather months (April through September, or 100 days per year). A fraction ingested (FI) of 0.5 was used for child and adult recreational users exposed to soil, which assumes that recreational receptors are at the study area/site for only a portion of the day.

As noted in the construction worker and recreational user calculation spreadsheets (Attachment A-5), a value of 0.6 was used for the relative bioavailability (RBA) for arsenic (USEPA, 2012). An RBA value of 1 was used for all other chemicals.

2.0 Dermal Contact with Soil

Direct physical contact with soil may result in the dermal absorption of chemicals. Exposure associated with dermal contact with soil is estimated using USEPA guidance (USEPA, 2004) according to the equation presented in the RBC calculation sheets.

Most of the exposure assumptions used to estimate chemical intakes from dermal contact with soil are based on the default assumptions described in the standard USEPA guidance and are summarized in the construction worker and recreational user calculation spreadsheets. The following paragraphs briefly

discuss non-default receptor-specific exposure assumptions for dermal contact with soil used in the HHRA.

The same exposure frequencies and durations recommended for the evaluation of incidental ingestion of soil are used to estimate chemical intakes for dermal contact with soil. The soil adherence factors presented are those listed in Exhibits 3.3 and 3.5 of Risk Assessment Guidance for Superfund (RAGS) Part E. To the extent possible, chemical-specific dermal absorption factors provided in RAGS Part E were used to evaluate the chemicals of potential concern (COPCs) for soil. However, dermal absorption factors are only available for the short list of chemicals listed in Exhibit 3-4 of RAGS Part E. A value of "0" was used for the absorption factor for chemicals lacking dermal absorption factors in RAGS Part E.

For the constituents identified as COPCs in soil, the following dermal absorption factors were used (USEPA, 2004):

- Polycyclic aromatic hydrocarbons (PAHs) - 0.13
- Arsenic - 0.03

3.0 Inhalation of Air Containing Fugitive Dust/Volatiles Emitted from Soil

Inhalation exposures have been included in calculation of the USEPA Regional Screening Levels (RSLs) used to evaluate hypothetical future residents and industrial workers, and inhalation exposures were also included in RBC calculations for construction workers and recreational users. The RBC calculation spreadsheets present the equations used for both particulates and vapors/gases (USEPA, 2009).

Some of the exposure assumptions used to estimate chemical intakes from inhalation of fugitive dusts/volatile emissions from surface and subsurface soils are based on default assumptions described in the standard USEPA guidance and are summarized in the RBC calculation sheets. The same exposure frequencies and durations used to estimate incidental ingestion of soil intakes are used to estimate exposure via inhalation of fugitive dust/volatile emissions for subsurface soils. The concentrations of chemicals in air resulting from emissions from soil are developed following procedures presented in USEPA's Soil Screening Guidance (USEPA, 2002) and are calculated using the equations presented in the RBC calculation sheets.

The particulate emissions factor (PEF) used in the equation relates the concentration of the chemical in soil to the concentration in dust particles in air. A PEF value of $1.36 \times 10^{+09} \text{ m}^3/\text{kg}$ was obtained from USEPA's RSL Calculator Internet site at http://epa-prgs.ornl.gov/cgi-bin/chemicals/csl_search. This is the default value for Hartford, Connecticut, which is the closest city to Former NCBC Davisville listed on the Internet site. Because air emissions resulting from fugitive dust emissions settings will be different than

dust emissions generated during construction activities, a separate PEF was used for construction activities. The PEF for construction workers ($1.40 \times 10^{+6}$ m³/kg) was calculated using the equations presented in the supplemental SSL guidance document (USEPA, 2002). The PEF for the construction worker is more conservative than the PEF used for other receptors because it is assumed that construction workers are exposed to dusty conditions. A sample calculation for the PEF is presented in Attachment A-5.

Ambient air concentrations resulting from the volatilization of COPCs from soil were not calculated in this HHRA because no volatile chemicals were selected as COPCs.

4.0 Direct/Incidental Ingestion of Groundwater

Direct ingestion of groundwater at the CED Area Drum Removal Area and Sites 02/03 is likely limited to exposure that would occur under a future residential scenario. Incidental ingestion of groundwater by construction workers may occur during excavation activities if groundwater is encountered in a trench. Ingestion exposures have been included in calculation of the USEPA RSLs for tap water used to evaluate hypothetical future residents. Incidental ingestion exposures were also included in RBC calculations for construction workers. The RBC calculation spreadsheets present the equations used for incidental ingestion of groundwater (USEPA, 1989).

Construction workers were assumed to be exposed to groundwater for 30 days per year for 1 year, which is less frequent than soil exposures. A shorter exposure frequency is recommended for a construction worker exposed to groundwater than that recommended for exposure to soil because it is unlikely that a construction worker would have direct contact with groundwater on a daily basis during a construction project. An ingestion rate of 0.05 L/day was assumed for construction workers exposed to groundwater.

5.0 Dermal Contact with Groundwater

Dermal contact with groundwater at the CED Area Drum Removal Area and Sites 02/03 is limited to exposure that would occur under residential and construction scenarios. Hypothetical future site residential receptors are assumed to use groundwater for domestic purposes (e.g., bathing, showering, and dish washing) that could result in dermal exposure. Short-term dermal exposure is assumed to occur for the construction worker during excavation activities. Dermal contact exposures have been included in calculation of the USEPA RSLs for tap water used to evaluate hypothetical future residents. Dermal contact exposures were also included in RBC calculations for construction workers. The RBC calculation spreadsheets present the equations used for dermal contact with groundwater (USEPA, 1989).

USEPA has not established default exposure frequency assumptions for a construction worker exposed to groundwater. Consequently, it was assumed that the construction worker would be exposed to groundwater for 4 hours per day for 30 days per year. A shorter exposure frequency is recommended for a construction worker exposed to groundwater than that recommended for exposure to soil because it is unlikely that a construction worker would have direct contact with groundwater on a daily basis during a construction project. The exposed surface area of the body available for contact is based on assumed activities and is similar to the assumptions outlined for dermal contact with soil.

The absorbed dose per event (DA_{event}) was estimated using a non-steady-state approach for organic compounds and a traditional steady-state approach for inorganics. Equations for the calculation of DA_{event} are presented in the RBC calculation spreadsheets. Values for chemical-specific parameters (t^* , K_p , FA , τ , and B) were obtained from the current dermal guidance (USEPA, 2004, Exhibit B-3) and presented summarized in the construction worker calculation spreadsheets (Attachment A-5). If published values were not available for a particular compound, they were calculated using equations provided in the USEPA dermal guidance. The dermal permeability (K_p) values recommended in the USEPA dermal guidance (USEPA, 2004) were used to calculate DA_{event} values for inorganic COPCs.

6.0 Inhalation of Volatiles from Groundwater

Groundwater exposure may also result in chemical intake through inhalation if the water resource is used as a domestic water supply or is exposed during construction activities, and volatiles are present in the groundwater. This exposure route is plausible for residential receptors that may be exposed while showering, bathing, washing dishes, etc., or for construction workers contacting shallow groundwater during excavation activities. Inhalation exposures have been included in calculation of the USEPA RSLs for tap water used to evaluate hypothetical future residents. Inhalation exposures were also included in RBC calculations for construction workers. The RBC calculation spreadsheets present the equations used for construction worker inhalation of groundwater (USEPA, 2009).

Construction workers may be exposed to COPCs that have volatilized from groundwater when an excavation exposes the shallow water table. The same exposure frequencies and times used to estimate intake from dermal contact with groundwater were used to evaluate intake from inhalation of volatiles from groundwater during construction.

No well-established models are available for estimating migration of volatiles from groundwater into a construction or utility trench. To estimate the EPCs for air in a construction trench, the HHRA used an approach suggested by the Virginia Department of Environmental Quality (VDEQ) (VDEQ, 2007), which is based on a combination of a vadose zone model (to estimate volatilization of gases from contaminated

groundwater into a trench), and a box model (to estimate contaminant dispersion from the air inside the trench to the above-ground atmosphere). The VDEQ methodology is described in the following paragraphs.

The airborne concentration of a contaminant in a trench can be estimated using the following equation:

$$C_{\text{air}} = C_{\text{GW}} \times \text{VF}$$

where:

C_{air}	=	contaminant concentration in air in the trench ($\mu\text{g}/\text{m}^3$)
C_{GW}	=	concentration of contaminant in groundwater ($\mu\text{g}/\text{L}$)
VF	=	volatilization factor (L/m^3)

It was assumed that a construction project could excavate to 15 feet bgs or less. If the depth to groundwater at a site is less than 15 feet, the VDEQ model assumes that a worker would encounter groundwater when digging an excavation or trench. The worker would then be directly exposed to the groundwater. The worker would also be exposed to contaminants in the air inside the trench as a result of volatilization from groundwater pooling in the trench bottom.

The following equation is used to calculate the volatilization factor (VF) for a trench less than 15 feet deep:

$$\text{VF} = (\text{Ki} \times \text{A} \times \text{F} \times 10^{-3} \times 10^4 \times 3,600) / (\text{ACH} \times \text{V})$$

Where:

Ki	=	contaminant's overall mass-transfer coefficient (cm/s)
A	=	trench area (m^2)
F	=	fraction of floor through which contaminant can enter (unitless)
ACH	=	air changes per hour (h^{-1}) = 360 h^{-1}
V	=	trench volume (m^3)
10^{-3}	=	conversion factor (L/cm^3)
10^4	=	conversion factor (cm^2/m^2)
3,600	=	conversion factor (seconds/hour)

Studies of urban canyons suggest that if the ratio of trench width (relative to wind direction) to trench depth is less than or equal to one, a circulation cell(s) will be created in the trench which limits the degree of gas exchanged with the atmosphere. Thus, measured building ventilation rates lead to an assumption

of two air changes per hour (ACH). If the width-to-depth ratio of the trench is greater than one, the air exchange between the trench and above-ground atmosphere is unrestricted, based on the ratio of trench depth to average wind speed; therefore, the ACH is assumed to be 360. The exposure assessment in this HHRA assumes that the width-to-trench depth ratio is greater than one; thus, the ACH is set at 360.

K_i is calculated using the following equation:

$$K_i = 1 / \left\{ \left(\frac{1}{k_i L} \right) + \left[\frac{RT}{H_i k_i G} \right] \right\}$$

Where:

K_i	=	contaminant's overall mass-transfer coefficient (cm/s)
$k_i L$	=	liquid-phase mass-transfer coefficient of i (cm/s)
R	=	ideal gas constant (atm·m ³ /mole·°K) = 8.2×10^{-5}
T	=	average system absolute temperature (°K) (Default = 298°K)
H_i	=	Henry's Law Constant of i (atm·m ³ /mole)
$k_i G$	=	gas-phase mass-transfer coefficient of i (cm/s)

Formulae for calculating $k_i L$ and $k_i G$ are as follows:

$$k_i L = (M_{O_2} / M_{W_i})^{0.5} \times (T / 298) \times k_{L, O_2}$$

Where:

$k_i L$	=	liquid-phase mass-transfer coefficient of component i (cm/s)
M_{O_2}	=	molecular weight of oxygen (g/mole)
M_{W_i}	=	molecular weight of component i (g/mole)
k_{L, O_2}	=	liquid-phase mass-transfer coefficient of oxygen at 25°C (cm/s) = 0.002 cm/s

$$k_i G = (M_{H_2O} / M_{W_i})^{0.335} \times (T / 298)^{1.005} \times k_{G, H_2O}$$

Where:

$k_i G$	=	gas-phase mass-transfer coefficient of component i (cm/s)
M_{H_2O}	=	molecular weight of water (g/mole)
k_{G, H_2O}	=	gas-phase mass-transfer coefficient of water vapor at 25°C (cm/s) = 0.833 cm/s (USEPA, 1988)

Chemical properties were obtained from the USEPA RSL Table (USEPA, 2015) and are presented in the RBC calculation spreadsheets (Appendix A-6).

7.0 Calculation of Risk-Based Concentrations

RBCs were calculated using a target cancer risk of $1E-06$ for carcinogens and a target hazard index (1) for non-carcinogens. The cancer slope factors (CSFs), inhalation unit risks (IURs), reference doses (RfDs), and reference concentrations (RfCs) used in the equations were obtained from EPA literature sources using the hierarchy specified in USEPA guidance (USEPA, 2003). Tables A-6.1 through A-6.4 present the toxicity criteria used in the RBC calculations.

RISK ASSESSMENT SPREADSHEET - CALCULATION OF RISK-BASED CONCENTRATIONS FOR SOIL (PAGE ONE OF FIVE)

SITE NAME: FORMER NCBC DAVISVILLE, NORTH KINGSTOWN, RHODE ISLAND
 EXPOSURE POINT: CED AREA DRUM REMOVAL AREA
 EXPOSURE SCENARIO: LIFELONG RECREATIONAL USERS
 MEDIA: SOIL
 DATE: AUGUST 6, 2014

THIS SPREADSHEET CALCULATES SCREENING LEVELS FOR EXPOSURES TO SOIL
 VIA INCIDENTAL INGESTION, DERMAL CONTACT, AND INHALATION

RELEVANT EQUATIONS:

Carcinogens
$$RBC_{soil} = \frac{TCR}{Intake_{oral} \cdot CSF_{oral} + Intake_{derm} \cdot CSF_{derm} + EC_{air} \cdot IUR}$$

Noncarcinogens
$$RBC_{soil} = \frac{THI}{\left(\frac{Intake_{oral}}{RfD_{oral}}\right) + \left(\frac{Intake_{derm}}{RfD_{derm}}\right) + \left(\frac{EC_{air}}{RfC}\right)}$$

$$Intake_{oral} = \frac{IR \times RBA \times EF \times ED \times FI \times CF}{BW \times AT}$$

$$Intake_{derm} = \frac{SA \times AF \times ABS \times EF \times ED \times CF}{BW \times AT}$$

$$EC_{air} = \frac{ET \times EF \times ED \times [1/PEF + 1/VF]}{AT \times 24 \text{ hours/day}}$$

Mutagenic

$$RBC_{soil} = \frac{TCR}{Intake_{ages0-2} + Intake_{ages2-6} + Intake_{ages6-16} + Intake_{ages16-26}}$$

INPUT ASSUMPTIONS:

	Parameter	Value	Definition
General	SL =:		Screening level in soil (mg/kg)
	TCR =:	1E-06	Target Cancer Risk
	THI =:	1	Target Hazard Index
	EFc =:	100	Exposure Frequency - Child (days/year)

CALCULATION OF RISK-BASED PRELIMINARY CLEANUP LEVELS (PAGE 1 OF 3)

SITE NAME: FORMER NCBC DAVISVILLE, NORTH KINGSTOWN, RHODE ISLAND
LOCATION: CED AREA
EXPOSURE SCENARIO: CONSTRUCTION WORKERS
MEDIA: GROUNDWATER
DATE: JANUARY 21, 2015

THIS SPREADSHEET CALCULATES RISK-BASED CLEANUP GOALS FOR EXPOSURES TO GROUNDWATER THROUGH INCIDENTAL INGESTION, DERMAL CONTACT, AND INHALATION.

RELEVANT EQUATION:

Carcinogens

$$PRG_{GW} = \frac{TCR}{Intake_{oral} \cdot CSF_{oral} \cdot CF + Intake_{derm} \cdot CSF_{derm} \cdot CF + Intake_{inh} \cdot IUR}$$

NonCarcinogens

$$PRG_{GW} = \frac{THI}{\left[\left(\frac{Intake_{oral}}{RfD_{oral}} \right) + \left(\frac{Intake_{derm}}{RfD_{derm}} \right) + \left(\frac{Intake_{inh}}{RfC} \right) \right] \cdot CF}$$

$$Intake_{oral} = \frac{IR \times EF \times ED}{BW \times AT}$$

$$Intake_{derm} = \frac{DA_{event} \times EV \times ED \times EF \times SA}{BW \times AT}$$

$$Intake_{inh} = \frac{VF \times ET \times EF \times ED}{AT \times 24 \text{ hr/day}}$$

For Inorganics $DA_{event} = Kp \times CF2 \times tevent$

For Organics

If $tevent \leq t^*$, then : $DA_{event} = 2 \times FA \times Kp \times CF \times \sqrt{\frac{6 \times \tau \times tevent}{\pi}}$

If $tevent > t^*$, then : $DA_{event} = FA \times Kp \times CF \times \left[\frac{tevent}{1+B} + 2 \times \tau \times \left(\frac{1+3B+3B^2}{(1+B)^2} \right) \right]$

- Where:
- TCR = : 1.0E-06 Target Cancer Risk
 - THI = : 1 Target Hazard Index
 - IR = : 0.05 Incidental ingestion rate of groundwater (L/day)
 - SA = : 3,470 Skin surface available for contact (cm²)
 - CF = : 0.001 Conversion Factor (mg/ug or L/cm³)
 - DA_{event} = : Chemical specific absorbed dose per event (mg/cm²-event)
 - EV = : 1 Event frequency (events/days)
 - ET = : 4 Exposure time (hours/day)
 - EF = : 30 Exposure frequency (days/year)
 - ED = : 1 Exposure duration (years)
 - BW = : 80 Body weight (kg)
 - AT_c = : 25,550 Averaging time for carcinogenic exposures (days)
 - AT_n = : 365 Averaging time for noncarcinogenic exposures (days)
 - Kp = : Chemical specific permeability coefficient (cm/hr)
 - tevent = : 4 duration of event (hr/event)
 - tau = : Chemical specific lag time (hr)
 - t* = : Chemical specific time it takes to reach steady state (hr)
 - B = : Chemical specific dimensionless constant
 - VF = : Chemical specific volatilization factor (L/m³) (See Page 3)
 - CSF_{oral} = : oral carcinogenic slope factor ((mg/kg/day)⁻¹)
 - RfD_{oral} = : oral noncarcinogenic reference dose (mg/kg/day)
 - CSF_{derm} = : dermal carcinogenic slope factor ((mg/kg/day)⁻¹)
 - RfD_{derm} = : dermal noncarcinogenic reference dose (mg/kg/day)
 - IUR = : inhalation unit risk ((ug/m³)⁻¹)
 - RfC = : inhalation reference concentration (mg/m³)

Method:				
Monitor Reading (ppm):				

SAMPLE COLLECTION INFORMATION:

Analysis	Preservative	Container Requirements	Collected
TPH GRO (MTBE - Naphthalene)	MeOH, ≤6°C	1 x 40 mL vial	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO
TPH DRO (C9-C40)/Total Solids	≤6°C	1 x 4-oz amber jar	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO

OBSERVATIONS / NOTES:

* See sample boring log for a detailed sample description.
 Sample was originally placed on hold and later analyzed by the lab.
 03SB003 is a biased sample location. Alternating layers of poorly graded sand and well graded sand w/ gravel. In the 6-10 ft interval, the GRO fraction was collected from the S-4D interval (f-c sand, f gravel); the soil was then homogenized and the DRO fraction was collected from mixed soil.

COMPOSITE SAMPLE DATA:

Table with 5 columns: Date, Time, Depth Interval, Color, Description (Sand, Silt, Clay, Moisture, etc.)

SAMPLE COLLECTION INFORMATION:

Table with 4 columns: Analysis, Preservative, Container Requirements, Collected

OBSERVATIONS / NOTES:

* See sample boring log for a detailed sample description. Sample was originally placed on hold and later analyzed by the lab. Checked position of SB007 after drilling. Advanced a 2nd boring (7a) when it was discovered that the 1st attempt at the SB007 boring was in the wrong place (pin flag missing). 03SB007a is a biased sample location. In the 6-10 ft interval, the GRO fraction was collected from S-4B (f sand); the soil was then homogenized and the DRO fraction was collected from mixed soil. Refusal encountered at 8.5 ft bgs at 03SB007a. NOTE - THE 0610 SAMPLE DESIGNATION SHOULD HAVE BEEN LABELED 0608.5.

 C.O.C. No.: _____

Type of Sample:
 Low Concentration
 High Concentration

GRAB SAMPLE DATA:

Date: 10/13/2014	Depth Interval (ft bgs)	Color	Description (Sand, Silt, Clay, Moisture, etc.)*
Time: 1125	6.0 - 10.0	Various shades of Tan-Brn to Red-Brn to Dk Gray to Dk Brn	WG sand w/gravel to pg sand to 3 layers of silty sand w/ gravel and 2 in-between layers of broken rock; dry, no stains, no odors
Method: acetate sleeve			
Monitor Reading (l): 0.0			

COMPOSITE SAMPLE DATA:

Date:	Time	Depth Interval	Color	Description (Sand, Silt, Clay, Moisture, etc.)
Method:				
Monitor Reading (ppm):				

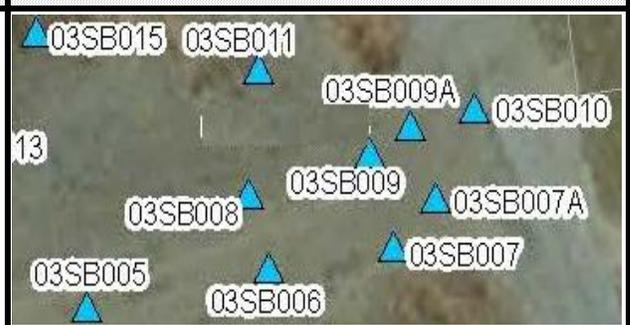

SAMPLE COLLECTION INFORMATION:

Analysis	Preservative	Container Requirements	Collected
TPH GRO (MTBE - Naphthalene)	MeOH, ≤6°C	1 x 40 mL vial	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO
TPH DRO (C9-C40)/Total Solids	≤6°C	1 x 4-oz amber jar	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO

OBSERVATIONS / NOTES:

* See sample boring log for a detailed sample description.
 Sample was originally placed on hold and later analyzed by the lab.
 03SB011 is a biased sample location. In the 6-10 ft interval, the GRO fraction was collected from the middle of S-4B (med sand, oxidized grains); the soil was then homogenized and the DRO fraction was collected from mixed soil. Oxidized spots also observed at S-4G interval.

OBSERVATIONS / NOTES:

* See sample boring log for a detailed sample description.
 Sample was originally placed on hold and later analyzed by the lab. Basically poorly graded sand w/gravel on top and bottom w/an interval of silty sand w/ gravel in-between these layers. 03SB014 is a biased sample location. In the 6-10 ft interval, the GRO fraction was collected from the top of the recovered soil core (S-4A, f-m sand, f gravel), where a PID reading up to 6.2 ppm was encountered; soil then homogenized and DRO fraction collected from mixed soil. No visual evidence of stains or olfactory evidence of odor noted from this interval.

 C.O.C. No.: _____

Type of Sample:
 Low Concentration
 High Concentration

GRAB SAMPLE DATA:

Date: 10/13/2014	Depth Interval (ft bgs)	Color	Description (Sand, Silt, Clay, Moisture, etc.)*
Time: 1155	6.0 - 10.0	Brn to Gray w/Red-Brn to Red-Brn to Dk Gray	Layer 1 - Sand (f-m) little Gravel (f); Layer 2 - Sand (f) tr. Gravel, oxidized interval; Layer 3 - Sand (m); Layer 4 - Silty Sand (f) some Gravel (f+c); dry, no stains, no odors
Method: acetate sleeve			
Monitor Reading (l): 0.0 ppm			

COMPOSITE SAMPLE DATA:

Date:	Time	Depth Interval	Color	Description (Sand, Silt, Clay, Moisture, etc.)
Method:				
Monitor Reading (ppm):				

SAMPLE COLLECTION INFORMATION:

Analysis	Preservative	Container Requirements	Collected
TPH GRO (MTBE - Naphthalene)	MeOH, ≤6°C	1 x 40 mL vial	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO
TPH DRO (C9-C40)/Total Solids	≤6°C	1 x 4-oz amber jar	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO

OBSERVATIONS / NOTES:

* See sample boring log for a detailed sample description.
 Sample was originally placed on hold and later analyzed by the lab. Basically a PG sand unit w/ gravel overlying a silty sand unit w/gravel. 03SB016 is a biased sample location. In the 6-10 ft interval, the GRO fraction was collected from the S-4D interval (silty f sand, f+c gravel, till-like); the soil was then homogenized and the DRO fraction was collected from mixed soil.

SAMPLE COLLECTION INFORMATION:

Analysis	Preservative	Container Requirements	Collected
TPH GRO (MTBE - Naphthalene)	MeOH, ≤6°C	1 x 40 mL vial	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO
TPH DRO (C9-C40)/Total Solids	≤6°C	1 x 4-oz amber jar	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO

OBSERVATIONS / NOTES:

* See sample boring log for a detailed sample description.
 Sample was originally placed on hold and later analyzed by the lab. 03SB021 is a grid sample location. In the 4-6 ft interval, the GRO fraction was collected from S-3D (f-c sand, f gravel, oxidized); the soil was then homogenized and the DRO fraction was collected from mixed soil.

Monitor Reading (µ): 0.0 ppm			

COMPOSITE SAMPLE DATA:

Date:	Time	Depth Interval	Color	Description (Sand, Silt, Clay, Moisture, etc.)
Method:				
Monitor Reading (ppm):				

SAMPLE COLLECTION INFORMATION:

Analysis	Preservative	Container Requirements	Collected
TPH GRO (MTBE - Naphthalene)	MeOH, ≤6°C	1 x 40 mL vial	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO
TPH DRO (C9-C40)/Total Solids	≤6°C	1 x 4-oz amber jar	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO

OBSERVATIONS / NOTES:

* See sample boring log for a detailed sample description.
 Sample was originally placed on hold and later analyzed by the lab.
 03SB026 is a grid sample location. In the 4-6 ft interval, the GRO fraction was collected from the top of the recovered soil core, S-2A (silty f sand, little gravel); the soil was then homogenized and the DRO fraction was collected from mixed soil.

Type of Sample:
 Low Concentration
 High Concentration

GRAB SAMPLE DATA:

Date: 10/14/2015	Depth Interval (ft bgs)	Color	Description (Sand, Silt, Clay, Moisture, etc.)*
Time: 1305	4.0 - 6.0	Gray-Brn to Dk Brn, excluding color of broken rock	A layer of Sand (m-c) tr. Gravel (f) and a layer of Silty Sand (f) tr. Gravel (f) with a layer of broken rock in between; dry, no stains, no odors.
Method: acetate sleeve			
Monitor Reading (l 0.0 ppm			

COMPOSITE SAMPLE DATA:

Date:	Time	Depth Interval	Color	Description (Sand, Silt, Clay, Moisture, etc.)
Method:				
Monitor Reading (ppm):				

SAMPLE COLLECTION INFORMATION:

Analysis	Preservative	Container Requirements	Collected
TPH GRO (MTBE - Naphthalene)	MeOH, ≤6°C	1 x 40 mL vial	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO
TPH DRO (C9-C40)/Total Solids	≤6°C	1 x 4-oz amber jar	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO

OBSERVATIONS / NOTES:

* See sample boring log for a detailed sample description.
 Sample was originally placed on hold and later analyzed by the lab.
 03SB031 is a grid sample location. In the 4-6 ft interval, the GRO fraction was collected from the S-3A interval (m-c sand, f gravel); the soil was then homogenized and the DRO fraction was collected from mixed soil.

 Low Concentration
 High Concentration

GRAB SAMPLE DATA:

Date: 10/13/2014	Depth Interval (ft bgs)	Color	Description (Sand, Silt, Clay, Moisture, etc.)*
Time: 1040	0-2	Dk Brn to Lt Brn	f-m Sand, tr f Gravel overlying a layer of f Sand; dry, no stains, no odors
Method: acetate sleeve			
Monitor Reading (l): 0.0 ppm			

COMPOSITE SAMPLE DATA:

Date:	Time	Depth Interval	Color	Description (Sand, Silt, Clay, Moisture, etc.)
Method:				
Monitor Reading (ppm):				

SAMPLE COLLECTION INFORMATION:

Analysis	Preservative	Container Requirements	Collected
TPH GRO (MTBE - Naphthalene)	MeOH, ≤6°C	1 x 40 mL vial	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO
TPH DRO (C9-C40)/Total Solids	≤6°C	1 x 4-oz amber jar	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO

OBSERVATIONS / NOTES:

* See sample boring log for a detailed sample description.
 03SB012 is a grid sample location. In the 0-2 ft interval, the GRO fraction was collected from the middle of S-1B (f sand); the soil was then homogenized and the DRO fraction was collected from mixed soil.

Type of Sample:
 Low Concentration
 High Concentration

GRAB SAMPLE DATA:

Date: 10/14/2014	Depth Interval (ft bgs)	Color	Description (Sand, Silt, Clay, Moisture, etc.)*
Time: 1150	0-2	Gray/Brown	Sand (f-c) and Gravel (f+c), tr Silt; dry, no stains, no odors
Method: acetate sleeve			
Monitor Reading (l 0.0 ppm			

COMPOSITE SAMPLE DATA:

Date:	Time	Depth Interval	Color	Description (Sand, Silt, Clay, Moisture, etc.)

SAMPLE COLLECTION INFORMATION:

Analysis	Preservative	Container Requirements	Collected
TPH GRO (MTBE - Naphthalene)	MeOH, ≤ 6°C	1 x 40 mL vial	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO
TPH DRO (C9-C40)/Total Solids	≤ 6°C	1 x 4-oz amber jar	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO

OBSERVATIONS / NOTES:

* See sample boring log for a detailed sample description.
03SB029 is a grid sample location. In the 0-2 ft interval, the GRO fraction was collected from the middle of the recovered soil core (f-c sand, f+c gravel); the soil was then homogenized and the DRO fraction was collected from mixed soil.

Notes:

1) Well screen depth for MW02-03S based on total well depth of 33 ft below top of riser as measured during Fall 2014 Investigation. Assume well screen is set at bottom of well and extends 10 ft.

FAMSL - Feet above mean sea level

ft bgs - feet below ground surface

NA - Not applicable

PAGE 14 OF 14

Detected concentrations are presented in bold font.

Footnotes:

- 2 - Total petroleum hydrocarbons are the sum of detected extractable total petroleum hydrocarbon and gasoline range organic results.
- 3 - For samples in which both extractable TPH and GRO were non-detected, the detection limit for extractable TPH was used for TPH.

Definitions:

NA = Not applicable/not available

Qualifiers:

J = Estimated value.
U = Non-detected value.

SOIL Footnotes:

NA = The chemical was not analyzed or no value was available.

Data Qualifiers:

Blank (i.e., no qualifier) = the chemical was detected.

> = The chemical was detected.

J = The chemical was detected but the concentration reported is an estimated value.

U = The chemical was not detected.

< = The chemical was not detected.

R = The chemical was rejected.

SOIL Footnotes:

NA = The chemical was not analyzed or no value was available.

Data Qualifiers:

Blank (i.e., no qualifier) = the chemical was detected.

> = The chemical was detected.

J = The chemical was detected but the concentration reported is an esti

U = The chemical was not detected.

< = The chemical was not detected.

R = The chemical was rejected.

SOIL Footnotes:

NA = The chemical was not analyzed or no value was available.

Data Qualifiers:

Blank (i.e., no qualifier) = the chemical was detected.

> = The chemical was detected.

J = The chemical was detected but the concentration reported is an esti

U = The chemical was not detected.

< = The chemical was not detected.

R = The chemical was rejected.

SOIL Footnotes:

NA = The chemical was not analyzed or no value was available.

Data Qualifiers:

Blank (i.e., no qualifier) = the chemical was detected.

> = The chemical was detected.

J = The chemical was detected but the concentration reported is an esti

U = The chemical was not detected.

< = The chemical was not detected.

R = The chemical was rejected.

ATTACHMENT D

DATA VALIDATION MEMORANDA

Overview

The sample set for NCBC Davisville, CTO WE01, SDG N1822 consisted of twenty (20) aqueous environmental samples, two (2) rinsate blanks, and nine (9) trip blanks. Thirty (30) aqueous samples were analyzed for Volatile Organic Compounds (VOC) and Gasoline Range Organics (GRO). Seventeen (17) aqueous samples were analyzed for naphthalene. Eight (8) aqueous samples were analyzed for Semi-Volatile Organic Compounds (SVOC), pesticides (PEST), and Polychlorinated Biphenyls (PCB). Twenty-two (22) aqueous samples were analyzed for Diesel Range Organics (DRO) (C9-C40). Two field duplicate pairs were included in this Sample Delivery Group (SDG): FD01-093014/MW03-17S-NWG-093014 and FD02-101014/MW02-10S-NWG-101014.

The samples were collected by Tetra Tech, Inc. on September 29 - October 3, 7-10, 2014 and analyzed by Spectrum Analytical Inc. All analyses were conducted in accordance with SW846 Methods 8260C, 8270D, 8270D SIM, 8081A, 8082A, and 8015D analytical and reporting protocols. The data was evaluated based on the following parameters:

- Data Completeness
- * • Holding Times/Sample Preservation
- * • GC/MS Instrument Tuning and System Performance
- Initial and Continuing Calibration Results
- * • Laboratory Method and Trip Blank Results
- Surrogate Spike Recoveries
- * • Internal Standard Areas
- Laboratory Control Sample/Laboratory Control Sample Duplicate Results
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
- * • Field Duplicate Precision
- * • Detection Limits
- * • Compound Identification and Quantification

The asterisk (*) indicates that all quality control criteria were met for this parameter. Qualified (if applicable) analytical results are summarized in Appendix A. Results as reported by the laboratory are presented in Appendix B. Appendix C contains Region I worksheets, and Appendix D contains the documentation to support the findings as discussed in this data validation report. An EPA Region 1 tier II validation was performed on the data in this SDG. The text of this report has been formulated to address only those areas affecting data quality.

DATA COMPLETENESS

Sample MW02-03S-NWG-100314 was not analyzed for VOC and GRO as requested on the sample Chain of Custody (COC). The laboratory was contacted and confirmed the oversight. The monitoring well was resampled by Tetra Tech Inc. and the results are reported in SDG N2224 of this project.

The following compounds were missing from the data package according to the site specific Sampling and Analysis Plan:

VOC

Bromochloromethane
1,2,3-Trichlorobenzene

SVOC

1,3-Dinitrobenzene
1,4-Dioxane
Di-n-butyl phthalate
Di-n-octyl phthalate
N-Nitroso-di-n-propylamine
N-Nitrosodiphenylamine

TO: S. ANDERSON
SDG: N1822

PAGE 3

The laboratory revised the data package to include all the compounds with the exception of 1,3-dinitrobenzene. The GC/MS was not calibrated for this compound. The laboratory performed a Tentatively Identified Compound (TIC) search for 1,3-dinitrobenzene. This compound was not detected as a TIC in the SVOC samples.

Sample MW03-02S-NWG-092914 was analyzed for SVOC, PEST, and PCB by the laboratory; however, the sampler amended the sample COC to exclude these analyses for this sample. The sample results for these analyses were included in the data validation and in the database as per the project manager's request.

Samples MW03-15I-NWG-092914 and RB01-100114 were analyzed for naphthalene in the SVOC 8270D analysis and the 8270D SIM analysis. The 8270D SIM analyses were not requested for these samples on the COC form. Results from both analyses were reported in the database.

INITIAL AND CONTINUING CALIBRATION RESULTS

The VOC continuing calibration performed on 10/08/14 @ 21:28 had Percent Differences (%Ds) for bromomethane, trichlorofluoromethane, and 1,2-dichloroethane above the 20% quality control limit. Samples FD01-093014, MW02-05S-NWG-100214, MW02-08SA-NWG-100114, MW03-02S-NWG-92914, MW03-04S-NWG-093014, MW03-05S-NWG-100114, MW03-15I-NWG-092914, MW03-15S-NWG-100114, MW03-17I-NWG-100214, MW03-17S-NWG-093014, RB01-100114, TB01-092914, TB02-093014, TB03-10014, and TB04-100214 were affected. The non-detected results reported for these compounds in the affected samples were qualified as estimated, (UJ).

The VOC continuing calibration performed on 10/09/14 @ 09:30 had %Ds for dichlorodifluoromethane, trichlorofluoromethane, 1,2-dichloroethane, and 1,1,2-trichloro-1,2,2-trifluoroethane above the 20% quality control limit. The non-detected results reported for these compounds in the affected samples, MW01-10S-NWG-100214 and MW01-12S-NWG-100214, were qualified as estimated, (UJ).

The VOC continuing calibration performed on 10/14/14 @ 08:42 had %Ds for trichlorofluoromethane, acetone, and 1,2-dichloroethane above the 20% quality control limit. The non-detected results reported for these compounds in the affected trip blanks, TB05-100314 and TB06-100614, were qualified as estimated, (UJ).

The VOC continuing calibration performed on 10/17/14 @ 10:11 had %Ds for dichlorodifluoromethane, bromomethane, trichlorofluoromethane, and acetone above the 20% quality control limit. Samples FD02-101014, MW01-14S-NWG-100914, MW02-09S-NWG-100814, MW02-10S-NWG-101014, MW02-11S-NWG-100814, MW02-4SA-NWG-100614, MW03-16S-NWG-100614, RB02-100814, TB07-100714, TB08-100914, and TB09-101014 were affected. The non-detected results reported for these compounds in the affected samples were qualified as estimated, (UJ).

The SVOC initial calibration performed on 09/26/14 had a Percent Relative Standard Deviations (%RSDs) for hexachlorocyclopentadiene and benzaldehyde above the 20% quality control limit. All SVOC samples were affected. The non-detected results reported for these compounds in the affected samples were qualified as estimated, (UJ).

The SVOC continuing calibration performed on 10/24/14 @ 13:15 had a %D for hexachlorocyclopentadiene above the 20% quality control limit. All samples were affected with the exception of samples MW03-17I-NWG-100214 and MW03-17S-NWG-093014. The non-detected results reported for this compound in the affected samples were qualified as estimated, (UJ).

The SVOC continuing calibration performed on 10/27/14 @ 15:27 had %Ds for bis(2-chloroethyl)ether, hexachlorocyclopentadiene, 4-nitrophenol, and pentachlorophenol above the 20% quality control limit. The

non-detected results reported for these compounds in the affected samples, NWG-100214 and MW03-17S-NWG-093014, were qualified as estimated, (UJ).

LABORATORY METHOD AND TRIP BLANK RESULTS

The following compounds were detected in the laboratory method blanks at the following maximum concentrations:

<u>Compound</u>	<u>Maximum Concentration (µg/L)</u>	<u>Action Level (µg/L)</u>
Di-n-butylphthalate ⁽¹⁾	7.0	70
Di-n-butylphthalate ⁽²⁾	3.3	33

- (1) Maximum concentration detected in the SVOC laboratory method blank, MB-79360, from preparation batch #79360 affecting the all samples except MW03-16S-NWG-100614.
- (2) Maximum concentration detected in the SVOC laboratory method blank, MB-79478, from preparation batch #79478 affecting sample MW03-16S-NWG-100614.

An action level of 5X the maximum contaminant concentration was established to evaluate blank contamination. Percent moisture, dilution factor, and sample aliquot were taken into consideration during the application of the action level. The detected results reported for iron below the established action level in the affected samples were qualified as non-detected, (U). The associated rinsate blank in the SVOC fraction was not qualified for laboratory method blank contamination.

NOTES

The PEST Continuing Calibration Verifications (CCVs) performed on 10/20/14 @ 15:53 and had a %D on GC column CLPPest II greater than the 20% quality control limit for delta-BHC. No action was taken because this compound was not detected in the associated samples.

The common laboratory contaminant, methylene chloride, was detected in the rinsate blanks but not in the environmental samples.

The SVOC surrogate spike compound, 2-fluorobiphenyl, had %Rs above the upper quality control limit in samples, MW03-15I-NWG-092914, MW03-15S-NWG-100114, and MW03-16S-NWG-100614. No action was taken because only one base/neutral surrogate was noncompliant.

The %R for the PCB surrogate spike compound, decachlorobiphenyl, was below the lower quality control limit in sample RB01-100114. No action was necessary because only one surrogate on one GC column was noncompliant.

The Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) and Matrix Spike/Matrix Spike Duplicate (MS/MSD) analyses associated with preparation batch # 79443 in the VOC fraction had Percent Recoveries (%Rs) for 1,2-dichloroethane which exceeded the upper quality control limit. No action was taken in the associated samples because this compound was not detected.

The LCS/LCSD analyses associated with preparation batch #79488 in the VOC fraction had a %R for 1,2-dichloroethane which exceeded the upper quality control limit. No action was necessary because this compound was not detected in the associated trip blanks.

The LCS/LCSD analyses associated with preparation batch #79554 in the VOC fraction had a %R for acetone which exceeded the upper quality control limit. No action was necessary because this compound was not detected in the associated samples.

TO: S. ANDERSON
SDG: N1822

PAGE 5

The Relative Percent Difference (RPD) for 3,3'-dichlorobenzidine exceeded the 30% quality control limit in the SVOC LCS/LCSD analysis associated with preparation batch #79478. No action was taken because the %Rs for this compound were within the quality control limits.

The MSD %R for pentachlorophenol was slightly above the upper quality control limit in the SVOC fraction. No action was taken because the MS and associated LCS %Rs were acceptable and this compound was not detected in the parent sample.

Detected results reported below the Limit of Quantitation (LOQ) but above the Detection Limit (DL) were qualified as estimated, (J). Non-detected results are reported to the Limit of Detection (LOD).

EXECUTIVE SUMMARY

Laboratory Performance: One sample was not analyzed for VOC and GRO as indicated on the sample COC. Several compounds were missing from the original data package. Some samples received analyses that were not requested on the COC. Initial calibration %RSDs exceeded 20% in the SVOC fraction. Continuing calibration %Ds were above 20% in the VOC and SVOC fractions. A CCV %D in the PEST fraction exceeded 20%. Surrogate spike noncompliances were noted in the SVOC and PEST fractions. LCS/LCSD noncompliances were noted in the VOC and SVOC.

Other Factors Affecting Data Quality: Detected results below the LOQ were estimated.

The data for these analyses were reviewed with reference to the EPA New England Environmental Data Review Supplement for Regional Data Review Elements Superfund Guidance/Procedures (April 2013), National Functional Guidelines for Organic Data Validation (January 2008), National Functional Guidelines for Inorganic Data Validation (January 2010), and the Department of Defense (DoD) document entitled, "Quality Systems Manual (QSM) for Environmental Laboratories" (July 2013). The text of this report has been formulated to address only those areas affecting data quality.

APPENDIX A

QUALIFIED LABORATORY RESULTS

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e. chromatography, interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 standard deviations is greater than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed
- Z3 = Tentatively Identified Compound aldol condensate

APPENDIX C
REGIONAL WORKSHEETS

EPA-NE - Data Validation Worksheet

Case: _____

SDG: _____

see DV letter

VOA/SV-II-A

II A. GC/MS INSTRUMENT PERFORMANCE CHECK – (TUNING)

Note: NOT for Selected Ion Monitoring (SIM) Analysis

List all Instrument Performance Checks that are outside method QC tuning acceptance criteria.

VOA Instrument Performance Check (Compound Name)	Analysis Date and Time	Instrument	Ions Affected	Percent Relative Abundance	QC Limits	Samples Affected	Action

Comments:

SV Instrument Performance Check (Compound Name)	Analysis Date and Time	Instrument	Ions Affected	Percent Relative Abundance	QC Limits	Samples Affected	Action

Comments:

If tuning compounds and criteria are different from those specified in CLP SOW SOM01.2, the validator should include a copy of the method-specific tuning criteria with this worksheet.

Validator: M. Allen

Date: 11/17/14

EPA-NE - Data Validation Worksheet

Case: _____

SDG: _____

See DV letter

Pest/PCB-II-A

II A. GC/ECD INSTRUMENT PERFORMANCE CHECK - Resolution - List all analytes that are outside resolution criteria.

RCM (Section II)	Date/Time	Instr.	Column	Compound	% Resolution	Samples Affected	Action
PEM (Section II and IV)							
JNDA & B (Section III)							
JNDA & B (Section IV)							

Validator: M. Allen

Date: 11/19/14

EPA-NE - Data Validation Worksheet

Case: _____

SDG: _____

see DV letter

Pest/PCB-II-B

II B. GC/ECD INSTRUMENT PERFORMANCE CHECK - Retention Times - List all analytes that exceed retention time criteria.

PEM (Section II and IV)	Date/Time	Instr.	Column	Compound	RT Window	RT	Samples Affected	Action
INDA & B (Section IV)								

Validator: M. Allen

Date: 11/17/14

Case: _____

SDG: _____

See DV letter

Pest/PCB-II-D

II D. GC/ECD INSTRUMENT PERFORMANCE CHECK - Pesticide Degradation - List all analytes that exceed degradation criteria.

PEM (Section II)	Date/Time	Instr.	Column	DDT, Endrin, or Combined	% Breakdown	DDD, DDE, Endrin ketone, Endrin aldehyde Present	Samples Affected	Action
PEM (Section IV)								

Validator: M. Allen

Date: 11/17/14

EPA-NE - Data Validation Worksheet

Case: _____

SDG: _____

VOA/SV/Pest/PCB-V-A
 V. A: BLANK ANALYSIS

List the blank contamination below.

Concentration Level: _____

Sampler: _____ Company: _____ Contacted: Yes No Date: _____

1. Laboratory: Method, Storage and Instrument Blanks

See DV letter

Fraction/ Matrix	Sample ID (Blank Type)	Date Extracted	Date Analyzed	Instrument/ Column	Compound	Conc. (units)

2. Field: Equipment (Rinsate), Trip and Bottle Blanks

Fraction/ Matrix	Sample ID (Blank Type)	Date Extracted	Date Analyzed	Instrument/ Column	Compound	Conc. (units)

Validator: M. Allen

Date: 11/17/14

Case: _____

SDG: _____

Pest/PCB-VII-A

VII A. PESTICIDE/PCB CLEANUP - GPC Calibration and Verification

The GPC Calibration data and GPC Calibration Verification Solution recovery data were reviewed and found to meet criteria.

Y N NA

If no, list the compounds and samples affected by the unacceptable GPC performance.

see DV letter

Date/Time of GPC Calibration or Calib. Verification	GC Analysis Date	Analyte	GPC % Resolution or RT Shift	% Rec	QC Limits	Samples Affected	Action

Were all target compounds less than QL for the GPC blank? Y N

Were acceptable GPC Calibration Verifications performed at the correct frequency? Y N

Were Aroclor patterns similar to those corresponding Aroclor standards of the Initial Calibration sequence? Y N

Action: Refer to National Functional Guidelines for the appropriate action to be taken. Comment on any action taken below:

Validator: M. Allen

Date: 4/17/01

EPA-NE - Data Validation Worksheet

Case: _____ SDG: _____

VOA/SV/Pest/PCB-IX

IX. FIELD DUPLICATE PRECISION - List all field duplicate analytes that are outside criteria.
Use a separate worksheet for each field duplicate pair.

Sample Number _____ Duplicate Sample Number _____ Matrix _____

See DV letter

Fraction	Compound	Sample Conc.	Sample QL		Duplicate Conc.	Duplicate QL		RPD	QC Acceptance Criteria RPD or NA*	Action
			SQL	2xSQL		SQL	2xSQL			

*For instances where one duplicate result is ND (or reported less than the sample QL).

Does the MS/MSD data indicate acceptable laboratory precision? Y N

Refer to EPA New England Data Review Program Supplemental guidance for field duplicate actions (Section 2.8).

Comments: _____

Sampler Name: _____ Contractor Name: _____ Date Contacted: _____

Reason for Contact and resolution obtained: _____

Validator: M. Allen

EPA-NE - Data Validation Worksheet

Case: _____

SDG: _____

VOA/SV-XIII

XIII. SAMPLE QUANTITATION AND % SOLIDS

Recalculate, from the raw data, the concentrations for one positive detect and one reported sample quantitation limit for a non-detect in a diluted sample or soil sample per fraction. (Note: Although NFG requires that one calculation for each fraction in each sample be performed, the validator is only required to reproduce an example, for each fraction, of one positive detect and one sample quantitation limit calculation on this worksheet.)

Do all soil/sediment samples have % solids greater than 30%?

Y N

If no, list sample numbers

Refer to EPA New England Data Review Supplemental Program guidance for actions related to %solids (Section 2.10).

See DV letter

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirements have been met.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1822

SW846 8260C, VOC by GC-MS

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8260C

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW5030B

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: V10
Instrument Type: GCMS-VOA

Description: HP7890A
Manufacturer: Agilent
Model: 7890A / 5975C
GC Column used: 30 m X 0.25 mm ID [1.40 um thickness] DB-624
capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits with the following exceptions. Please note that most test procedures allow for several compounds outside of the QC limits for the LCS, although this may indicate a bias for this specific compound.

LCS-79443 in batch 79443, recovery is above criteria for 1,2-Dichloroethane at 132% with criteria of (70-130).

LCS-79488 in batch 79488, recovery is above criteria for 1,2-Dichloroethane at 133% with criteria of (70-130).

LCS-79554 in batch 79554, recovery is above criteria for Acetone at 151% with criteria of (40-140).

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: MW01-14S-NWG-100914 (N1822-47BMS), MW01-14S-NWG-100914 (N1822-47BMSD), MW03-15I-NWG-092914 (N1822-04AMS) and MW03-15I-NWG-092914 (N1822-04AMSD).

Percent recoveries were within the QC limits with the following

exceptions:

MW03-15I-NWG-092914 (N1822-04AMS), recovery is above criteria for 1,2-Dichloroethane at 133% with criteria of (70-130).

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

Internal standard peak areas were within the QC limits.

F. Dilutions:

No sample in this SDG required analysis at dilution.

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

Manual integration was performed on the following:

VSTD00110S 1,2-Dichloroethane , Bromomethane due to M7

VSTD05010Z 2-Hexanone due to M6

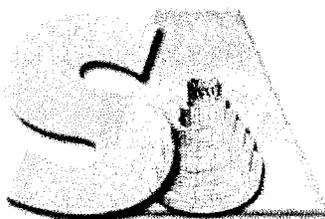

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and

for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'T. J. H.', written over a horizontal line.

HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 1 of 2):

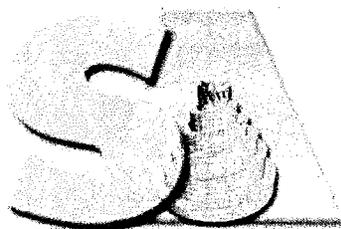

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.
- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.
- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS Matrix Spike.
- MSD Matrix Spike Duplicate
- DUP Duplicate analysis
- SD Serial Dilution
- PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1822

SW846 8270D, SVOA by GC-MS

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8270D

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: S6
Instrument Type: GCMS-Semi

Description: HP7890A
Manufacturer: Agilent
Model: 7890A/5973
GC Column used: 30 m X 0.25 mm ID [0.25 um thickness] Rxi-5sil MS capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits with the following exceptions. Please note that the acceptance criteria allow one surrogate recovery outside of the QC limits per fraction.

MW03-15I-NWG-092914 (N1822-04B), recovery is above criteria for 2-Fluorobiphenyl at 112% with criteria of (50-110).

FD01-093014 (N1822-09B), recovery is above criteria for 2-Fluorobiphenyl at 110% with criteria of (50-110).

MW03-15S-NWG-100114 (N1822-18C), recovery is above criteria for 2-Fluorobiphenyl at 115% with criteria of (50-110).

MW03-16S-NWG-100614 (N1822-37B), recovery is above criteria for 2-Fluorobiphenyl at 117% with criteria of (50-110).

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits with the following exceptions. Please note 1,4-Dioxane was not included in the LCS spike.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: MW03-15I-NWG-092914 (N1822-04BMS) and MW03-15I-NWG-092914 (N1822-04BMSD).

Percent recoveries were within the QC limits with the following exceptions:

MW03-15I-NWG-092914 (N1822-04BMSD), recovery is above criteria for Pentachlorophenol at 116% with criteria of (40-115).

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

Internal standard peak areas were within the QC limits.

F. Dilutions:

No sample in this SDG required analysis at dilution.

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

Manual integrations were performed on the following:

LCS-79360 4-Nitrophenol due to M1

LCS-79478 4-Nitrophenol due to M1

LCSD-79478 4-Nitrophenol due to M1

SSTD0056L 2,4-Dinitrophenol due to M6

SSTD0256L 2,4-Dinitrophenol due to M6

SSTD0256N 2-Methylnaphthalene due to M1

SSTD025L6 Indeno(1,2,3-cd)pyrene due to M1

SSTD0406L Nitrobenzene due to M6

SSTD0606L 2,4-Dinitrophenol , Nitrobenzene due to M6

SSTD0806L 2,4-Dinitrophenol , Indeno(1,2,3-cd)pyrene,
Nitrobenzene due to M6

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'J. H. L.', written over a horizontal line.

QC Flag Legend

Q - Qualifier signal failed the ratio test.
 M - Compound response manually integrated.

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1822

SW846 8270D SIM, SVOA by GC-MS

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8270D SIM

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: S6
Instrument Type: GCMS-Semi

Description: HP7890A
Manufacturer: Agilent
Model: 7890A/5973
GC Column used: 30 m X 0.25 mm ID [0.25 um thickness] Rxi-5sil MS capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: MW01-14S-NWG-100914 (N1822-47CMS), MW01-14S-NWG-100914 (N1822-47CMSD), MW03-15I-NWG-092914 (N1822-04BMS) and MW03-15I-NWG-092914 (N1822-04BMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

Internal standard peak areas were within the QC limits.

F. Dilutions:

No sample in this SDG required analysis at dilution.

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

No manual integrations were performed on any sample or standard.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'J. H. L.', written over a horizontal line.

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1822

SW846 8081B, Organochlorine Pesticides by GC-ECD

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8081B

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: E6
Instrument Type: GC-ECD
Description: HP6890
Manufacturer: Hewlett-Packard

Model: 6890
GC Column used: 30 m X 0.53 mm ID [0.50 um thickness] CLPPest
capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: MW03-15I-NWG-092914 (N1822-04BMS) and MW03-15I-NWG-092914 (N1822-04BMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Dilutions:

No sample in this SDG required analysis at dilution.

F. Samples:

The lower concentration between the primary and confirmatory GC column concentrations is reported due to the presence of interferences unless otherwise indicated. P flags are assigned to compounds when D% between the two columns are greater than 40%.

No other unusual occurrences were noted during sample analysis.

G. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

The following samples were manually integrated:

INDC1E6 Decachlorobiphenyl on front column , delta-BHC on rear column , Heptachlor on rear column due to M3

INDC3DF Decachlorobiphenyl on front column due to M3

PEMEA beta-BHC on rear column due to M3

TOXAPH3D6 Decachlorobiphenyl on front column , Toxaphene on front column , Toxaphene on rear column due to M3

TOXAPH3E6 Decachlorobiphenyl on front column , Toxaphene on front column due to M3

TOXAPH3EA Decachlorobiphenyl on front column , Toxaphene on front column due to M3

TOXAPH3EC Decachlorobiphenyl on front column , Tetrachloro-m-xylene on front column , Toxaphene on front column due to M3

TOXAPH4E6 Decachlorobiphenyl on front column , Toxaphene on front column due to M3

TOXAPH5E6 Decachlorobiphenyl on front column , Toxaphene on front column due to M3

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'T. J. H.', written over a horizontal line.

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1822

SW846 8082A, PCB by GC-ECD

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8082A

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: E2
Instrument Type: GC-ECD
Description: HP5890 II +
Manufacturer: Hewlett-Packard

Model: 5890

GC Column used: 30 m X 0.53 mm ID [0.50 um thickness] CLPPest capillary column.

GC Column used: 30 m X 0.53 mm ID [0.42 um thickness] CLPPestII capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits with the following exceptions. Please note that the acceptance criteria allow one surrogate recovery outside of the QC limits per fraction.

RB01-100114 (N1822-14C), recovery is below criteria for Decachlorobiphenyl on front column at 36% with criteria of (40-135).

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: MW03-15I-NWG-092914 (N1822-04BMS) and MW03-15I-NWG-092914 (N1822-04BMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Dilutions:

No sample in this SDG required analysis at dilution.

F. Samples:

The lower concentration between the primary and confirmatory GC column concentrations is reported due to the presence of interferences unless otherwise indicated. P flags are assigned to compounds when D% between the two columns are greater than 40%.

No other unusual occurrences were noted during sample analysis.

G. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

The following samples were manually integrated:

AR12423JV Decachlorobiphenyl on front column due to M3

AR12423JW Decachlorobiphenyl on front column due to M3

AR12426J2 Aroclor-1242 on front column due to M3

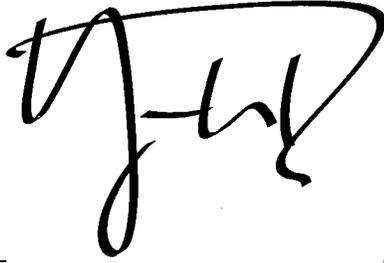

AR12482J2 Aroclor-1248 on front column due to M3

AR16603JV Decachlorobiphenyl on front column due to M3

AR16603JW Decachlorobiphenyl on front column ,
Decachlorobiphenyl on rear column due to M3

LCS-79428 Decachlorobiphenyl on front column due to M3

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'J. H. P.', written over a horizontal line.

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1822

SW846 8015D TPH, Total Petroleum Hydrocarbons (TPH) by GC-FID

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8015D TPH

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: F1
Instrument Type: GC-FID
Description: HP6890
Manufacturer: Hewlett-Packard

Model: 6890

GC Column used: 30 m X 0.32 mm ID [0.25 um thickness] Rtx-5MS capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: MW01-14S-NWG-100914 (N1822-47CMS), MW01-14S-NWG-100914 (N1822-47CMSD), MW03-15I-NWG-092914 (N1822-04BMS) and MW03-15I-NWG-092914 (N1822-04BMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Dilutions:

No sample in this SDG required analysis at dilution.

F. Samples:

No other unusual occurrences were noted during sample analysis.

G. Manual Integration

No sample in this SDG were performed with manual integration.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'J. H. P.', written over a horizontal line.

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1822

SW846 8015D GRO, Gasoline Range Organic (GRO) by GC-FID

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8015D GRO

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW5030B

V. INSTRUMENTATION

The following instrumentation was used to perform

Instrument Code: V4
Instrument Type: GC-FID/PID

Description: HP5890 A
Manufacturer: Hewlett-Packard
Model: 5890
GC Column used: 30 m X 0.53 mm ID [um thickness] RTX-502.2
capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: MW01-14S-NWG-100914 (N1822-47BMS), MW01-14S-NWG-100914 (N1822-47BMSD), MW03-15I-NWG-092914 (N1822-04AMS) and MW03-15I-NWG-092914 (N1822-04AMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

NA--Supervisor needs to explain why no internal standards were detected during the generation of this narrative.

F. Dilutions:

No sample in this SDG required analysis at dilution.

G. Samples:

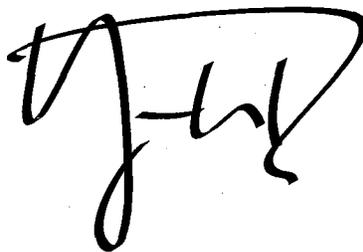

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Overview

The sample set for NCBC Davisville, CTO WE01, SDG N1822 consists of twenty (20) environmental aqueous samples and two (2) rinsate blanks analyzed for total and dissolved metals. There are two (2) field duplicate pairs associated with this SDG: FD01-093014/MW03-17S-NWG-093014 and FD02-101014/MW02-10S-NWG-101014.

The samples were collected on September 29 and 30, 2014 and October 1, 2,3,6,8 and 9, 2014 and analyzed by Spectrum Analytical. All analyses were conducted in accordance with SW-846 Method 6020A and 7470A. A Tier II validation was performed.

The data contained in this SDG were validated with regard to the following parameters:

- * • Data Completeness
- * • Holding Times
- * • Initial and Continuing Calibration
- Laboratory Method and/or Field Quality Control Blanks
- Laboratory Control Spike / Laboratory Control Spike Duplicate Recoveries
- Matrix Spike/Matrix Spike Duplicate Results
- * • ICP Interference Check Sample Results
- * • ICP Serial Dilution
- * • Duplicate Sample Results
- * • Detection Limits
- * • Analyte Quantitation
- * • Analyte Identification
- * • Field Duplicate Precision

The asterisk (*) indicates that all quality control criteria were met for this parameter. Qualified (if applicable) analytical results are summarized in Appendix A. Results as reported by the laboratory are presented in Appendix B. Appendix C contains Region I worksheets, and Appendix D contains the documentation to support the findings as

Date: December 19, 2014
Page 2

discussed in this data validation report. The attached Table summarizes the validation qualifications which are based on the following information:

LABORATORY METHOD BLANK

Contamination was detected in the laboratory preparation blanks, initial calibration and continuing calibration blanks at the following maximum concentrations:

<u>Contaminant</u>	<u>Maximum Concentration (ug/L)</u>	<u>Action Level (ug/L)</u>
Aluminum ⁽¹⁾	4.193	20.97
Barium ⁽¹⁾	1.981	9.91
Cobalt ⁽¹⁾	0.454	2.27
Copper ⁽¹⁾	0.242	1.21
Iron ⁽¹⁾	46.893	234.47
Nickel ⁽¹⁾	0.438	2.19
Aluminum ⁽²⁾	3.917	19.59
Beryllium ⁽²⁾	0.079	0.395
Cobalt ⁽²⁾	0.105	0.525
Lead ⁽²⁾	0.082	0.41
Magnesium ⁽²⁾	20.13	100.65
Potassium ⁽²⁾	27.786	138.93
Silver ⁽²⁾	0.28	1.4
Thallium ⁽²⁾	0.15	0.75
Arsenic ⁽³⁾	-0.581	2.91
Cobalt ⁽⁴⁾	0.031	1.55

- (1) Maximum concentration detected in the laboratory preparation blank associated with batch 79660.
- (2) Maximum concentration detected in the continuing calibration blank analyzed on October 24, 2014.
- (3) Maximum concentration detected in the initial calibration blank analyzed on October 24, 2014.
- (4) Maximum concentration detected in the laboratory preparation blank associated with batch 79679.

An action level of 5X the maximum concentration of contaminant was established in order to evaluate samples for blank contamination. Sample aliquot and dilution factors were taken into account when applying the action level. Detected results less than the action level were qualified as (U).

MATRIX SPIKE / MATRIX SPIKE DUPLICATE (MS / MSD)

The matrix spike (MS) percent recovery (%R) of iron was greater than the upper quality control limit in spiked sample MW03-15I-NWG-092914 (batch 79960). The detected iron results were qualified as estimated (J).

LABORATORY CONTROL SPIKE RECOVERIES

The laboratory control sample (LCS) %R of mercury was less than the 80% lower quality control limit in batch 79326. The nondetected mercury results were qualified as estimated (UJ).

ADDITIONAL COMMENTS

In worksheet #15 of the Tier II Sampling and Analysis Plan (SAP) Installation Restoration Site 3, (September 2013), the project action limit for thallium is less than the method detection limit. Positive results reported at concentrations greater than the method detection limit (MDL) but less than the Reporting

TO: S. Anderson
FROM: A. Cognetti
SDG: N1822
Date: December 19, 2014
Page 3

Limit (RL) were qualified as estimated (J).

Nondetected results were reported to the limit of detection (LOD).

EXECUTIVE SUMMARY

Laboratory Performance: Several metals were detected in the laboratory blanks. The laboratory control sample (LCS) %R of mercury was less than the 80% lower quality control limit in batch 79326.

Other Factors Affecting Data Quality: The MS %R of iron was greater than the upper quality control limit in spiked sample MW03-15I-NWG-092914. Positive results reported at concentrations greater than the method detection limit (MDL) but less than the Reporting Limit (RL) were qualified as estimated (J).

The data for these analyses were reviewed with reference to the EPA New England Environmental Data Review Supplement for Regional Data Review Elements, National Functional Guidelines for Inorganic Data Validation (January 2010), Superfund Guidance/Procedures Attachment 2-3a: Example Inorganic Data Review Worksheets (1/13), and the Department of Defense (DoD) document entitled, "Quality Systems Manual (QSM) for Environmental Laboratories" (July 2013). The text of this report has been formulated to address only those problem areas affecting data quality.

APPENDIX A

QUALIFIED LABORATORY RESULTS

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e. chromatography, interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 standard deviations is greater than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed
- Z3 = Tentatively Identified Compound aldol condensate

APPENDIX C

REGIONAL WORKSHEETS

INORG-II

Case: NCBC Davisville

SDG: N1022

II. ICP-MS TUNE

List all Tunes that are outside method QC acceptance criteria. Use a separate sheet if more than one instrument was used for sample analysis.

Method: _____ Instrument ID: _____

Method QC acceptance criteria for mass calibration: _____

Method QC acceptance criteria for resolution check/peak width: _____ at _____ % peak height.

Method QC acceptance criteria for % RSD: _____

Analysis Date and Time	Analyte	Mass Calibration			Mass Resolution		% RSD of Absolute Signals	Analyte/Samples Affected	Action
		True Mass (amu)	Measured Mass (amu)	Absolute Difference of Masses (amu)	Peak Width (amu)	% Peak Height			

Comments:

See (data validation) report

Validator: John Cozzetti

Date: 11/13/17

EPA-NE - Data Validation Worksheet

INORG-III-C/D

Case: NEBC Danville

SDG: N1822

III. CALIBRATIONS

C. Initial and Continuing Calibration Verifications - List all ICV and CCV analyte recoveries that are outside the method QC acceptance criteria.

ICV method QC acceptance criteria: _____ CCV method QC acceptance criteria: _____

Date/Time	Instrument ID	Analyte	ICV/CCV #	% R	Samples Affected	Action

D. Quantitation Limit Check Standard - List all QL Check Standard analytes that are outside method QC acceptance criteria (for non-CLP methods).

QL Check Standard method QC acceptance criteria: _____

Date	Instr.	Analyte	QL Check Std. #	% R	Affected Range	Samples Affected	Action

Comments: See data validation report

EPA-NE - Data Validation Worksheet

INORG-III-A/B

Case: NCBC Knoxville

SDG: N1822

III. CALIBRATIONS

A. **Initial Calibration** - List all calibration correlation coefficients that are outside the method QC acceptance criteria and/or the y-intercept of the calibration curve that is >CRQL.

Calibration correlation QC acceptance criteria: _____

Calibration Type: _____

Date/Time	Instrument ID	Analyte	Correlation Coefficient	y-Intercept	CRQL	Samples Affected	Action

B. **Initial Calibration Standard Concentration Verifications** – Review CLP Form 16-IN and list all calculated %Ds that are >30 of the true value of any non-zero standard.

Date/time	Instrument ID	Analyte	True Conc.	Found Conc.	%D	Samples Affected	Action

Comments: See (data validation) report

Validator: John Coquette

Date: 11/13/17

IV. BLANKS

C.1 Blank Contamination Worksheet

Circle or list the highest concentration of each contaminant.

Analyte	Date Analyzed	ICB	CCB							PBW	PBS	EB	BB	Max. Conc.	CRQL

SDG: N18ZZ

VII. ICP-MS INTERNAL STANDARDS

List all internal standards that are outside method QC acceptance criteria.

Method: _____

Method QC acceptance criteria: _____

Sample Number	Date and Time Analyzed	IS, amu	% RI	Analytes Affected (amu)	Action

Comments:

Validator: Ann Cognetti

Date: 11/13/17

EPA-NE - Data Validation Worksheet

INORG-XIV

Case: NCBC Danversville

SDG: N1822

XIV. ANALYTE QUANTITATION, REPORTED QUANTITATION LIMITS AND % SOLIDS

Recalculate, from the raw data, the concentrations for one positive detect and one reported sample quantitation limit for a non-detect in a diluted sample or soil sample per analytical method

Do all soil/sediment samples have % solids greater than 30%? Y N

• If no, were any steps employed to address the high moisture content? _____

• Indicate the action and list the affected sample nos.: _____

Refer to EPA New England Data Review Supplemental Program guidance for actions related to %solids (Section 2.10).

APPENDIX D

SUPPORT DOCUMENTATION

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1822

SW846 6020A, SW846 7470A

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test codes:
SW846 6020A, SW846 7470A

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: 200.7

Aqueous Samples were prepared following procedures in laboratory test code: SW7470A

V. INSTRUMENTATION

The following instrumentation was used:

Instrument Code: FIMS2
Instrument Type: CVAA
Description: FIMS
Manufacturer: Perkin-Elmer
Model: FIMS100

Instrument Code: X1
Instrument Type: ICPMS
Description: X1
Manufacturer: ThermoFisher
Model: X-Series 2

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits with the following exceptions.

LCS-79326 in batch 79326, recovery is below criteria for Mercury at 63% with criteria of (80-120). This batch (79326) was approved by the supervisor and lab director due to additional batch QC that passed criteria. There were distilled Matrix Spikes (2) and ICV/CCVs within this batch. In addition several samples from this batch did not have sufficient remaining volume to re-distill. Per DOD QSM D1.1.2.1 (c) this is acceptable corrective action.

2. Matrix spike (MS):

Matrix spikes were performed on samples: MW01-14S-NWG-100914 (N1822-47AMS), MW01-14S-NWG-100914-F (N1822-48AMS), MW03-15I-NWG-092914 (N1822-04CMS) and MW03-15I-NWG-092914-F (N1822-05AMS).

Percent recoveries were within the QC limits.

D. Post Digestion Spike (PDS):

A post-digestion spike was not performed on any sample in this SDG.

E. Duplicate sample:

Duplicate analyses were performed on samples: MW01-14S-NWG-100914 (N1822-47ADUP), MW01-14S-NWG-100914-F (N1822-48ADUP), MW03-15I-NWG-092914 (N1822-04CDUP) and MW03-15I-NWG-092914-F (N1822-05ADUP).

Relative percent differences were within the QC limits.

F. Serial Dilution (SD):

Serial Dilution analyses were performed on samples: MW01-14S-NWG-100914 (N1822-47ASD), MW01-14S-NWG-100914-F (N1822-48ASD), MW03-15I-NWG-092914 (N1822-04CSD) and MW03-15I-NWG-092914-F (N1822-05ASD).

Percent differences were within the QC limits with the exception of the following:

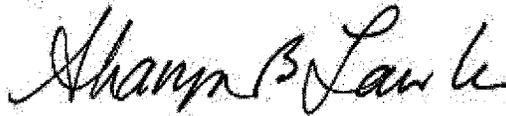

MW03-15I-NWG-092914 (N1822-04CSD), Serial Dilution analysis not within control limit for Zinc.

G. Samples:

No other unusual occurrences were noted during sample analysis.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the sample(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirements have been met.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

PAGE 2

- * • Field Duplicate Precision
- * • Detection Limits
- * • Compound Identification and Quantification

The asterisk (*) indicates that all quality control criteria were met for this parameter. Qualified (if applicable) analytical results are summarized in Appendix A. Results as reported by the laboratory are presented in Appendix B. Appendix C contains Region I worksheets, and Appendix D contains the documentation to support the findings as discussed in this data validation report.

MS/MSD

The TPH (C9-C40) MS/MSD performed on sample 03SS0070002 had a percent recovery greater than the quality control limit in the MSD. No action was taken on this basis because the MS had an acceptable recovery.

ADDITIONAL COMMENTS

Samples 03SB0010204, 03SS0020002, 03SS0030002, 03SS0040002, 03SS0070002, 03SS0080002, and 03SS0020002 were analyzed at five-fold dilutions because of TPH (C9-C40) concentrations greater than the linear calibration range of the instrument.

Sample 03SS0050002 was analyzed at a five-fold dilution because of the TPH (C9-C40) extract being dark and viscous. The extract was not analyzed undiluted.

Sample results were reported to the Limit of Detection (LOD).

EXECUTIVE SUMMARY

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

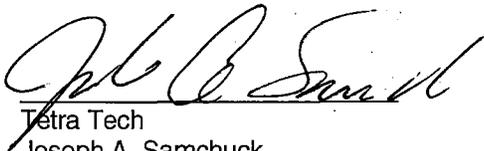

TO: S. ANDERSON
SDG: N1907

PAGE 3

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (June 2008), and the (DOD) QSM document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (July 2013).

- Appendix A – Qualified Analytical Results
- Appendix B – Results as Reported by the Laboratory
- Appendix C – Regional Worksheets
- Appendix D – Support Documentation

APPENDIX A

QUALIFIED LABORATORY RESULTS

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e. chromatography, interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 standard deviations is greater than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed
- Z3 = Tentatively Identified Compound aldol condensate

VOA/SV-II-A

II A. GC/MS INSTRUMENT PERFORMANCE CHECK – (TUNING)

Note: NOT for Selected Ion Monitoring (SIM) Analysis

List all Instrument Performance Checks that are outside method QC tuning acceptance criteria.

VOA Instrument Performance Check (Compound Name)	Analysis Date and Time	Instrument	Ions Affected	Percent Relative Abundance	QC Limits	Samples Affected	Action

Comments:

SV Instrument Performance Check (Compound Name)	Analysis Date and Time	Instrument	Ions Affected	Percent Relative Abundance	QC Limits	Samples Affected	Action

Comments:

If tuning compounds and criteria are different from those specified in CLP SOW SOM01.2, the validator should include a copy of the method-specific tuning criteria with this worksheet.

Validator: Edward Reddy

EPA-NE - Data Validation Worksheet

Case: FRMR NCBC DAVISVILLE

SDG: N 1907

Pest/PCB-VII-A

VII A. PESTICIDE/PCB CLEANUP - GPC Calibration and Verification

The GPC Calibration data and GPC Calibration Verification Solution recovery data were reviewed and found to meet criteria.

Y N NA

If no, list the compounds and samples affected by the unacceptable GPC performance.

Date/Time of GPC Calibration or Calib. Verification	GC Analysis Date	Analyte	GPC % Resolution or RT Shift	% Rec	QC Limits	Samples Affected	Action

Were all target compounds less than QL for the GPC blank? Y N

Were acceptable GPC Calibration Verifications performed at the correct frequency? Y N

Were Aroclor patterns similar to those corresponding Aroclor standards of the Initial Calibration sequence? Y N

Action: Refer to National Functional Guidelines for the appropriate action to be taken. Comment on any action taken below:

Validator: Edward Hedberg

Date: 11/11/14

SDG: N1907

VOA/SV-XIII

XIII. SAMPLE QUANTITATION AND % SOLIDS

Recalculate, from the raw data, the concentrations for one positive detect and one reported sample quantitation limit for a non-detect in a diluted sample or soil sample per fraction. (Note: Although NFG requires that one calculation for each fraction in each sample be performed, the validator is only required to reproduce an example, for each fraction, of one positive detect and one sample quantitation limit calculation on this worksheet.)

Do all soil/sediment samples have % solids greater than 30%?

Y N

If no, list sample numbers

Refer to EPA New England Data Review Supplemental Program guidance for actions related to %solids (Section 2.10).

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirements have been met.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

N1914 - ✓
N1931 - ✓

Good Morning Ed,

I have looked over the GRO/DRO data sent on Friday.

Since we are getting a few hits > the RIDEM 500 mg/kg DRO res DEC standard, we've decided to analyze all samples for GRO/DRO.

So, please analyze all soil samples submitted (including those currently on-hold).

If you can, please continue to send preliminary results for both waters and soils.... Getting a preliminary look at the data is extremely helpful.

Thanks very much for your time and support,

Lee Ann

PS THANKS MUCH TO JENNIFER AND AGNES FOR PITCHING IN LAST WEEK WHILE YOU WERE GONE!

To: Sedlmyer, Edward
Subject: RE: SDG N1907 Dilution for EPH C9-C40 for sample N1907-18 (03SS0050002)

Ed—

No, that sample was not analyzed undiluted. It wasn't diluted due to elevated TPH in the analytical range, but due to co-extracted high boiling compounds that give us problems (by condensing and "gumming-up" the injection port during analysis). The extract was dark and somewhat viscous, so it was diluted prior to injection.

Subject: SDG N1907 Dilution for EPH C9-C40 for sample N1907-18 (03SS0050002)

Good morning Ed,

I was looking at data for SDG N1907 and the EPH (C9-C40) dilution result for sample N1907-18 (03SS0050002) is nondetect. Was the sample analyzed undiluted? Why was the sample diluted?

Thanks

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1907

SW846 8015D GRO, Gasoline Range Organic (GRO) by GC-FID

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8015D GRO

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW5030B

Soil Samples were prepared following procedures in laboratory test code: SW5035

V. INSTRUMENTATION

The following instrumentation was used to perform

Instrument Code: V4
Instrument Type: GC-FID/PID
Description: HP5890 A
Manufacturer: Hewlett-Packard
Model: 5890
GC Column used: 30 m X 0.53 mm ID [um thickness] RTX-502.2
capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: 03SS0070002 (N1907-27BMS) and 03SS0070002 (N1907-27BMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

NA--Supervisor needs to explain why no internal standards were detected during the generation of this narrative.

F. Dilutions:

No sample in this SDG required analysis at dilution.

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

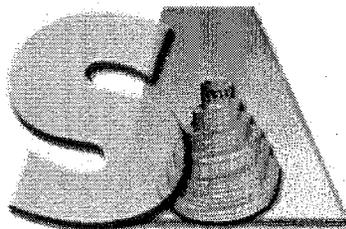

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 1 of 2):

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

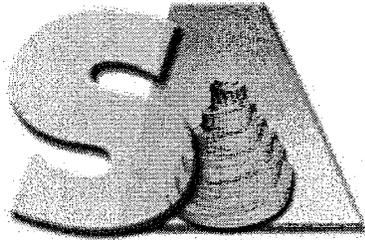

SPECTRUM ANALYTICAL, INC.

Featuring

HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.
- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.
- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

SPECTRUM ANALYTICAL, INC.

HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL** Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE** Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA** Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX** Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS** Matrix Spike.
- MSD** Matrix Spike Duplicate
- DUP** Duplicate analysis
- SD** Serial Dilution
- PS** Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1907

SW846 8015D TPH, Total Petroleum Hydrocarbons (TPH) by GC-FID

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8015D TPH

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C
Soil Samples were prepared following procedures in laboratory test code: SW3550B

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: F1
Instrument Type: GC-FID

Description: HP6890
Manufacturer: Hewlett-Packard
Model: 6890
GC Column used: 30 m X 0.32 mm ID [0.25 um thickness] Rtx-5MS
capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: 03SS0070002 (N1907-27AMS) and 03SS0070002 (N1907-27AMSD).

Percent recoveries were within the QC limits with the following exceptions:

03SS0070002 (N1907-27AMSD), recovery is above criteria for Extractable Total Petroleum Hydrocarbon at 152% with criteria of (50-150).

Replicate RPDs were within the advisory QC limits.

E. Dilutions:

The following samples were analyzed at dilution:

03SB0010204 (N1907-03A) : Dilution Factor: 5

03SS0020002 (N1907-06A) : Dilution Factor: 5

03SS0030002 (N1907-10A) : Dilution Factor: 5
03SS0040002 (N1907-14A) : Dilution Factor: 5
03SS0050002 (N1907-18A) : Dilution Factor: 5
03SS0070002 (N1907-27A) : Dilution Factor: 5
03SS0070002 (N1907-27AMS) : Dilution Factor: 25
03SS0070002 (N1907-27AMSD) : Dilution Factor: 25
03SS0080002 (N1907-31A) : Dilution Factor: 5
03SS0090002 (N1907-35A) : Dilution Factor: 5

F. Samples:

No other unusual occurrences were noted during sample analysis.

G. Manual Integration

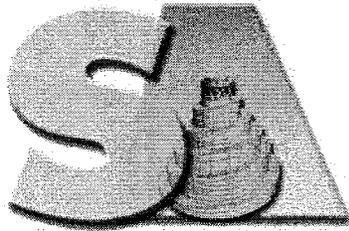

No sample in this SDG were performed with manual integration.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'J. H. L.', written over a horizontal line.

Signed: _____

HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 1 of 2):

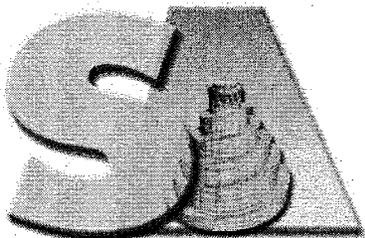

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.
- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.
- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

SPECTRUM ANALYTICAL, INC.

HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS Matrix Spike.
- MSD Matrix Spike Duplicate
- DUP Duplicate analysis
- SD Serial Dilution
- PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

PAGE 2

- * • Field Duplicate Precision
- * • Detection Limits
- * • Compound Identification and Quantification

The asterisk (*) indicates that all quality control criteria were met for this parameter. Qualified (if applicable) analytical results are summarized in Appendix A. Results as reported by the laboratory are presented in Appendix B. Appendix C contains Region I worksheets, and Appendix D contains the documentation to support the findings as discussed in this data validation report.

LCS/LCSD

The LCS/LCSD relative percent difference (RPD) for GRO exceeded the quality control limit for batch 79651. No action was taken on this basis because the percent recoveries for the LCS and LCSD were acceptable.

MS/MSD

The TPH (C9-C40) MS/MSD performed on sample 03SS0160002 had percent recoveries greater than the quality control limit in the MS and MSD. The detected TPH (C9-C40) result for sample 03SS0160002 was qualified as estimated (J).

ADDITIONAL COMMENTS

Sample 03SB0140610 were analyzed at a ten-fold dilution due to a GRO concentration greater than the linear calibration range of the instrument.

Samples 03SS0140002 and 03SS0160002 were analyzed at five-fold dilutions due to TPH (C9-C40) concentrations greater than the linear calibration range of the instrument.

Sample results were reported to the Limit of Detection (LOD).

EXECUTIVE SUMMARY

Laboratory Performance: MS/MSD percent recovery noncompliance resulted in the qualification of TPH (C9-C40) data for one sample.

Other Factors Affecting Data Quality: None.

TO: S. ANDERSON
SDG: N1911

PAGE 3

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (June 2008), and the (DOD) QSM document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (July 2013).

- Appendix B – Results as Reported by the Laboratory
- Appendix C – Regional Worksheets
- Appendix D – Support Documentation

APPENDIX A

QUALIFIED LABORATORY RESULTS

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e. chromatography, interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 standard deviations is greater than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed
- Z3 = Tentatively Identified Compound aldol condensate

APPENDIX B

RESULTS AS REPORTED BY THE LABORATORY

Client: Tetra Tech, Inc.

Client Sample ID: 03SB009A0204

Lab ID: N1911-07

Project: CED Area, WE01-Davisville

Collection Date: 10/13/14 10:00

Analyses	Result Qual	LOD	LOQ Units	DF	Date Analyzed	Batch ID
SW846 8015D GRO -- GASOLINE RANGE ORGANIC (GRO) BY GC-FID				GRO_S		
Gasoline Range Organics	ND	1600 ^	1600 ug/Kg		1 10/16/2014 12:51	79528
Surrogate: Bromofluorobenzene	105		79-118 %REC		1 10/16/2014 12:51	79528

Qualifiers: ND - Not Detected at the Limit of Detection
 J - Analyte detected below Limit of Quantitation
 B - Analyte detected in the associated Method Blank
 DF - Dilution Factor
 ^ Qualified to Limit of Detection (LOD)

S - Spike Recovery outside accepted recovery limits
 R - RPD outside accepted recovery limits
 E - Value above quantitation range
 LOQ - Limit of Quantitation
 LOD - Limit of Detection

Client: Tetra Tech, Inc.
 Client Sample ID: 03SB009A0406
 Lab ID: N1911-08

Project: CED Area, WE01-Davisville
 Collection Date: 10/13/14 10:05

Analyses	Result Qual	LOD	LOQ Units	DF	Date Analyzed	Batch ID
SW846 8015D GRO -- GASOLINE RANGE ORGANIC (GRO) BY GC-FID				GRO_S		
Gasoline Range Organics	ND	1500 ^	1500 ug/Kg	1	10/22/2014 12:03	79638
Surrogate: Bromofluorobenzene	97.5		79-118 %REC		10/22/2014 12:03	79638

Qualifiers: ND - Not Detected at the Limit of Detection
 J - Analyte detected below Limit of Quantitation

APPENDIX C

REGIONAL WORKSHEETS

EPA-NE - Data Validation Worksheet

Case: FRMR NCBC Davisville

SDG: N 1911

VOA/SV-II-A

II A. GC/MS INSTRUMENT PERFORMANCE CHECK – (TUNING)

Note: NOT for Selected Ion Monitoring (SIM) Analysis

List all Instrument Performance Checks that are outside method QC tuning acceptance criteria.

VOA Instrument Performance Check (Compound Name)	Analysis Date and Time	Instrument	Ions Affected	Percent Relative Abundance	QC Limits	Samples Affected	Action
Comments:							
SV Instrument Performance Check (Compound Name)	Analysis Date and Time	Instrument	Ions Affected	Percent Relative Abundance	QC Limits	Samples Affected	Action
Comments:							

If tuning compounds and criteria are different from those specified in CLP SOW SOM01.2, the validator should include a copy of the method-specific tuning criteria with this worksheet.

Validator: Edward Sedberry

Date: 11/19/14

Case: FRMR NCR Davisville

SDG: N1911

Pest/PCB-II-A

II.A. GC/ECD INSTRUMENT PERFORMANCE CHECK - Resolution - List all analytes that are outside resolution criteria.

RCM (Section II)	Date/Time	Instr.	Column	Compound	% Resolution	Samples Affected	Action
PEM (Section II and IV)							
INDA & B (Section III)							
INDA & B (Section IV)							

Validator: Edmund Leddy

Date: 11/19/14

see DV Report

EPA-NE - Data Validation Worksheet

Case: FRMR NCBC Danville
VOA/SV/Pest/PCB-V-A
V. A. BLANK ANALYSIS

SDG: N1911

List the blank contamination below.

Concentration Level: _____

Sampler: _____ Company: _____ Contacted: Yes No Date: _____

1. Laboratory: Method, Storage and Instrument Blanks

Fraction/Matrix	Sample ID (Blank Type)	Date Extracted	Date Analyzed	Instrument/Column	Compound	Conc. (units)

2. Field: Equipment (Rinsate), Trip and Bottle Blanks

Fraction/Matrix	Sample ID (Blank Type)	Date Extracted	Date Analyzed	Instrument/Column	Compound	Conc. (units)

Validator: Edward Hedley

Date: 11/19/14

Case: FRMRNCBC Davisville

SDG: N1911

VOA/SV/Pest/PCB-IX

IX. FIELD DUPLICATE PRECISION - List all field duplicate analytes that are outside criteria.
Use a separate worksheet for each field duplicate pair.

Sample Number _____ Duplicate Sample Number _____ Matrix _____

Fraction	Compound	Sample Conc.	Sample QL		Duplicate Conc.	Duplicate QL		RPD	QC Acceptance Criteria RPD or NA*	Action
			SQL	2xSQL		SQL	2xSQL			

*For instances where one duplicate result is ND (or reported less than the sample QL).

Does the MS/MSD data indicate acceptable laboratory precision? Y N

Refer to EPA New England Data Review Program Supplemental guidance for field duplicate actions (Section 2.8).
Comments: _____

Sampler Name: _____ Contractor Name: _____ Date Contacted: _____

Reason for Contact and resolution obtained: _____

Validator: Ebward Ledyard

Date: 11/19/14

See DU Report

EPA-NE - Data Validation Worksheet

Case: FRMR NCBC DeWittville

SDG: N1911

VOA/SV-XIII

XIII. SAMPLE QUANTITATION AND % SOLIDS

Recalculate, from the raw data, the concentrations for one positive detect and one reported sample quantitation limit for a non-detect in a diluted sample or soil sample per fraction. (Note: Although NFG requires that one calculation for each fraction in each sample be performed, the validator is only required to reproduce an example, for each fraction, of one positive detect and one sample quantitation limit calculation on this worksheet.)

Do all soil/sediment samples have % solids greater than 30%?

Y N

If no, list sample numbers

Refer to EPA New England Data Review Supplemental Program guidance for actions related to %solids (Section 2.10).

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirements have been met.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

N1931 - ✓

Good Morning Ed,

I have looked over the GRO/DRO data sent on Friday.

Since we are getting a few hits > the RIDEM 500 mg/kg DRO res DEC standard, we've decided to analyze all samples for GRO/DRO.

So, please analyze all soil samples submitted (including those currently on-hold).

If you can, please continue to send preliminary results for both waters and soils.... Getting a preliminary look at the data is extremely helpful.

Thanks very much for your time and support,

Lee Ann

PS THANKS MUCH TO JENNIFER AND AGNES FOR PITCHING IN LAST WEEK WHILE YOU WERE GONE!

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1911

SW846 8015D GRO, Gasoline Range Organic (GRO) by GC-FID

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8015D GRO

IV. PREPARATION

Soil Samples were prepared following procedures in laboratory test code: SW5035

V. INSTRUMENTATION

The following instrumentation was used to perform

Instrument Code: V4
Instrument Type: GC-FID/PID

Description: HP5890 A
Manufacturer: Hewlett-Packard
Model: 5890
GC Column used: 30 m X 0.53 mm ID [um thickness] RTX-502.2
capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits with the following exceptions. Please note that the acceptance criteria allow one surrogate recovery outside of the QC limits per fraction.

03SB0140610 (N1911-34B), recovery is above criteria for Bromofluorobenzene at 1425% with criteria of (79-118).

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: 03SS0100002 (N1911-02BMS), 03SS0100002 (N1911-02BMSD), 03SS0160002 (N1911-22BMS) and 03SS0160002 (N1911-22BMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

NA.

F. Dilutions:

The following samples were analyzed at dilution:

03SB0140610 (N1911-34BDL) : Dilution Factor: 10

G. Samples:

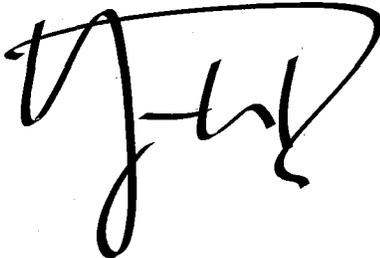

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

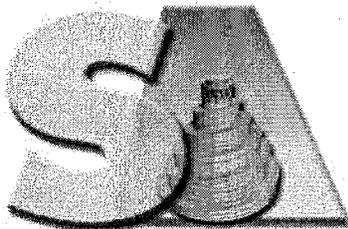

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'J. H. L.', written over a horizontal line.

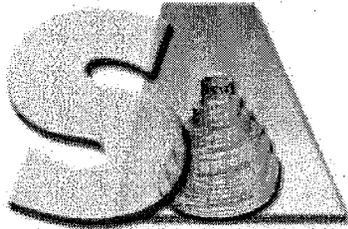

Signed: _____

HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 1 of 2):

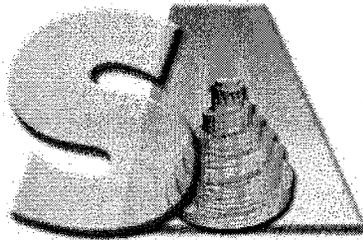

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

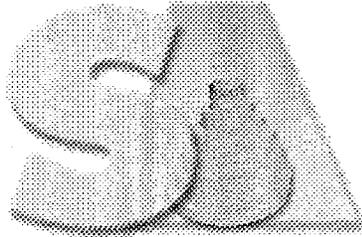

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.
- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.
- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL** Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE** Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA** Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX** Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS** Matrix Spike.
- MSD** Matrix Spike Duplicate
- DUP** Duplicate analysis
- SD** Serial Dilution
- PS** Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1911

SW846 8015D TPH, Total Petroleum Hydrocarbons (TPH) by GC-FID

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8015D TPH

IV. PREPARATION

Soil Samples were prepared following procedures in laboratory test code: SW3550B

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: F1
Instrument Type: GC-FID
Description: HP6890
Manufacturer: Hewlett-Packard

Model: 6890
GC Column used: 30 m X 0.32 mm ID [0.25 um thickness] Rtx-5MS
capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: 03SS0100002 (N1911-02AMS), 03SS0100002 (N1911-02AMSD), 03SS0160002 (N1911-22AMS) and 03SS0160002 (N1911-22AMSD).

Percent recoveries were within the QC limits with the following exceptions:

03SS0160002 (N1911-22AMS), recovery is above criteria for Extractable Total Petroleum Hydrocarbon at 238% with criteria of (50-150).

03SS0160002 (N1911-22AMSD), recovery is above criteria for Extractable Total Petroleum Hydrocarbon at 324% with criteria of (50-150).

Replicate RPDs were within the advisory QC limits.

E. Dilutions:

The following samples were analyzed at dilution:

03SS0160002 (N1911-22A) : Dilution Factor: 5
03SS0160002 (N1911-22AMS) : Dilution Factor: 5
03SS0160002 (N1911-22AMSD) : Dilution Factor: 5
03SS0140002 (N1911-31A) : Dilution Factor: 5

F. Samples:

No other unusual occurrences were noted during sample analysis.

G. Manual Integration

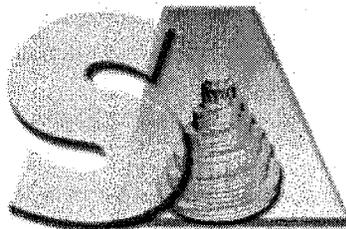

No sample in this SDG were performed with manual integration.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'J. H. L.', written over a horizontal line.

HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 1 of 2):

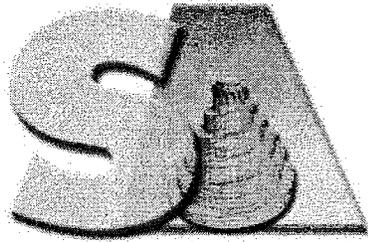

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.
- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.
- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

SPECTRUM ANALYTICAL, INC.

Featuring

HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL** Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE** Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA** Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX** Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS** Matrix Spike.
- MSD** Matrix Spike Duplicate
- DUP** Duplicate analysis
- SD** Serial Dilution
- PS** Post-digestion or Post-distillation spike. For metals or inorganic analyses

The asterisk (*) indicates that all quality control criteria were met for this parameter. Qualified (if applicable) analytical results are summarized in Appendix A. Results as reported by the laboratory are presented in Appendix B. Appendix C contains Region I worksheets, and Appendix D contains the documentation to support the findings as discussed in this data validation report.

HOLD TIME

The TPH (C9-C40) fourteen day extraction hold time was exceeded by one day for samples 03SS0180002, 03SS0190002, 03SS0200002, and 03SS0220002. The samples were initially extracted within the extraction hold time but had surrogate recoveries less than the quality control limit. The re-extracted results were used for validation because the surrogate recoveries were acceptable and the re-extracted results had higher TPH (C9-C40) concentrations. The detected TPH (C9-C40) results for samples 03SS0180002, 03SS0190002, 03SS0200002, and 03SS0220002 were qualified as estimated (J).

ADDITIONAL COMMENTS

The rinse blank (RB02-101414) had a TPH (C9-C40) detection at 0.21 mg/L. No action was taken on this basis.

Samples 03SS0180002 and 03SS0220002 were analyzed at five-fold dilutions due to possible matrix interference.

Sample results were reported to the Limit of Detection (LOD).

EXECUTIVE SUMMARY

Laboratory Performance: The TPH (C9-C40) extraction hold time was exceeded for four samples.

Other Factors Affecting Data Quality: None.

- Appendix C – Regional Worksheets
- Appendix D – Support Documentation

APPENDIX A

QUALIFIED LABORATORY RESULTS

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e. chromatography, interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 standard deviations is greater than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed
- Z3 = Tentatively Identified Compound aldol condensate

APPENDIX B

RESULTS AS REPORTED BY THE LABORATORY

Client: Tetra Tech, Inc.

Client Sample ID: 03SB0170204

Project: CED Area, WE01-Davisville

Lab ID: N1914-01

Collection Date: 10/13/14 14:05

Analyses	Result Qual	LOD	LOQ Units	DF	Date Analyzed	Batch ID
SW846 8015D GRO -- GASOLINE RANGE ORGANIC (GRO) BY GC-FID				GRO_S		
Gasoline Range Organics	ND	1600 ^	1600 ug/Kg	1	10/17/2014 14:16	79548
Surrogate: Bromofluorobenzene	109		79-118 %REC		10/17/2014 14:16	79548

Qualifiers: ND - Not Detected at the Limit of Detection
 J - Analyte detected below Limit of Quantitation
 B - Analyte detected in the associated Method Blank
 DF - Dilution Factor
 ^ Qualified to Limit of Detection (LOD)

S - Spike Recovery outside accepted recovery limits
 R - RPD outside accepted recovery limits
 E - Value above quantitation range
 LOQ - Limit of Quantitation
 LOD - Limit of Detection

Client: Tetra Tech, Inc.
 Client Sample ID: 03SB0170406
 Lab ID: N1914-02

Project: CED Area, WE01-Davisville
 Collection Date: 10/13/14 14:10

Analyses	Result Qual	LOD	LOQ Units	DF	Date Analyzed	Batch ID
SW846 8015D GRO -- GASOLINE RANGE ORGANIC (GRO) BY GC-FID				GRO_S		
Gasoline Range Organics	ND	1500 ^	1500 ug/Kg	1	10/23/2014 11:20	79651
Surrogate: Bromofluorobenzene	107		79-118 %REC		10/23/2014 11:20	79651

Qualifiers: ND - Not Detected at the Limit of Detection
 J - Analyte detected below Limit of Quantitation
 B - Analyte detected in the associated Method Blank
 DF - Dilution Factor
 ^ Qualified to Limit of Detection (LOD)

S - Spike Recovery outside accepted recovery limits
 R - RPD outside accepted recovery limits
 E - Value above quantitation range
 LOQ - Limit of Quantitation
 LOD - Limit of Detection

Client: Tetra Tech, Inc.

Client Sample ID: 03SB0170610

Lab ID: N1914-03

Project: CED Area, WE01-Davisville

Collection Date: 10/13/14 14:15

Analyses	Result Qual	LOD	LOQ Units	DF	Date Analyzed	Batch ID
SW846 8015D GRO -- GASOLINE RANGE ORGANIC (GRO) BY GC-FID			GRO_S			
Gasoline Range Organics	ND	1700 ^	1700 ug/Kg	1	10/23/2014 11:41	79651
Surrogate: Bromofluorobenzene	100		79-118 %REC		10/23/2014 11:41	79651

Qualifiers: ND - Not Detected at the Limit of Detection
 J - Analyte detected below Limit of Quantitation
 B - Analyte detected in the associated Method Blank

REGIONAL WORKSHEETS

EPA-NE - Data Validation Worksheet

Case: FRMRNCBCDAVISVILLE

SDG: N1914

VOA/SV-II-A

II A. GC/MS INSTRUMENT PERFORMANCE CHECK – (TUNING)

Note: NOT for Selected Ion Monitoring (SIM) Analysis

List all Instrument Performance Checks that are outside method QC tuning acceptance criteria.

VOA Instrument Performance Check (Compound Name)	Analysis Date and Time	Instrument	Ions Affected	Percent Relative Abundance	QC Limits	Samples Affected	Action

Comments:

SV Instrument Performance Check (Compound Name)	Analysis Date and Time	Instrument	Ions Affected	Percent Relative Abundance	QC Limits	Samples Affected	Action

Comments:

If tuning compounds and criteria are different from those specified in CLP SOW SOM01.2, the validator should include a copy of the method-specific tuning criteria with this worksheet.

Validator: Edward Sedberry

Date: 12/18/14

EPA-NE - Data Validation Worksheet

Case: FRMR NEBC DAVISVILLE

SDG: 161914

Pest/PCB-II-A

II A. GC/ECD INSTRUMENT PERFORMANCE CHECK - Resolution - List all analytes that are outside resolution criteria.

RCM (Section II)	Date/Time	Instr.	Column	Compound	% Resolution	Samples Affected	Action
PEM (Section II and IV)							
INDA & B (Section III)							
INDA & B (Section IV)							

Validator: Edward Bradley

Date: 12/18/14

SDG: N1914

VOA/SV/Pest/PCB-V-A
V. A. BLANK ANALYSIS

List the blank contamination below.

Concentration Level: _____

Sampler: _____ Company: _____ Contacted: Yes No Date: _____

1. Laboratory: Method, Storage and Instrument Blanks

Fraction/ Matrix	Sample ID (Blank Type)	Date Extracted	Date Analyzed	Instrument/ Column	Compound	Conc. (units)

2. Field: Equipment (Rinsate), Trip and Bottle Blanks

Fraction/ Matrix	Sample ID (Blank Type)	Date Extracted	Date Analyzed	Instrument/ Column	Compound	Conc. (units)

Validator: Edmund Hedberg

Date: 12/18/14

EPA-NE - Data Validation Worksheet

Case: FRMR NCBC, DeWittville

SDG: N1914

Pest/PCB-VII-A

VII A. PESTICIDE/PCB CLEANUP - GPC Calibration and Verification

The GPC Calibration data and GPC Calibration Verification Solution recovery data were reviewed and found to meet criteria.

Y N NA

If no, list the compounds and samples affected by the unacceptable GPC performance.

Date/Time of GPC Calibration or Calib. Verification	GC Analysis Date	Analyte	GPC % Resolution or RT Shift	% Rec	QC Limits	Samples Affected	Action

Were all target compounds less than QL for the GPC blank? Y N

Were acceptable GPC Calibration Verifications performed at the correct frequency? Y N

Were Aroclor patterns similar to those corresponding Aroclor standards of the Initial Calibration sequence? Y N

Action: Refer to National Functional Guidelines for the appropriate action to be taken. Comment on any action taken below:

Validator: Edward Sedliger

Date: 12/18/14

See DV Report

EPA-NE - Data Validation Worksheet

Case: FRMR NCBC Davisville

SDG: N1914

VOA/SV-VII

VII. SEMIVOLATILE CLEANUP - GPC Calibration and Verification - List all analytes that are outside method cleanup QC criteria.

Type of Cleanup	Instrument # or Lot #	Date/Time GPC Calibrated or Check Solution Analyzed	Compound	% Rec	QC Limits	Samples Affected	Action

Did the GPC column meet resolution requirements? Y N
Peak shape requirements? Y N
Retention time shift requirements? Y N
Was the GPC calibration, Silica Gel cleanup checked at the method required frequency with correct compounds and concentrations? Y N
Were all compounds less than QL for the GPC/Silica Gel/Acid-Partition blank? Y N
Did the blank surrogate recoveries and IS area counts and RTs (if added) meet method QC acceptance criteria? Y N

Comments:

Validator: Edward Bedlman

Date: 12/18/14

See DV Report

SDG: N1914

Pest/PCB-VII-B

VII B. PESTICIDE/PCB CLEANUP - Florisil Cartridge Performance Check

The Florisil Cartridge Performance Check recovery data were reviewed and found to meet criteria.

Y N

If no, list the analytes and samples affected by the unacceptable Florisil Cartridge Check.

Florisil Cartridge Lot #	Date of Florisil Cartridge Check	GC Analysis Date	Analyte	% Rec.	QC Limits	Samples Affected	Action

Were acceptable Florisil Cartridge Performance Checks performed at the correct frequency?

Y N

Action: Refer to Functional Guidelines for the appropriate action to be taken. Comment on any action taken below:

Validator: Edward Sedby

Date: 12/18/14

See DU Report

EPA-NE - Data Validation Worksheet

Case: FRMR NCBC DENVERVILLE

SDG: N1914

VOA/SV/Pest/PCB-VIII

VIII. MATRIX SPIKE/MATRIX SPIKE DUPLICATE - List all MS/MSD analytes that are outside method QC acceptance criteria. Use a separate worksheet for each MS/MSD pair.

Sample # _____

Matrix _____

Concentration Level _____

Fraction	Compound	Column 1			Column 2			Method QC Limits		Action
		MS % Rec.	MSD % Rec.	RPD	MS % Rec.	MSD % Rec.	RPD	% Recovery	RPD	

For Pest/PCB only.

Validator: Edward Redinger

Date: 12/18/14

See DU Report

EPA-NE - Data Validation Worksheet

Case: FRMR NCBC Davisville

SDG: N1914

VOA/SV/Pest/PCB-IX

IX. FIELD DUPLICATE PRECISION - List all field duplicate analytes that are outside criteria.

Use a separate worksheet for each field duplicate pair.

Sample Number _____ Duplicate Sample Number _____ Matrix _____

Fraction	Compound	Sample Conc.	Sample QL		Duplicate Conc.	Duplicate QL		RPD	QC Acceptance Criteria RPD or NA*	Action
			SQL	2xSQL		SQL	2xSQL			

*For instances where one duplicate result is ND (or reported less than the sample QL).

Does the MS/MSD data indicate acceptable laboratory precision? Y N

Refer to EPA New England Data Review Program Supplemental guidance for field duplicate actions (Section 2.8).

Comments: _____

Sampler Name: _____ Contractor Name: _____ Date Contacted: _____

Reason for Contact and resolution obtained: _____

Validator: Edward Sechler

Date: 12/18/14

See DU Report

EPA-NE - Data Validation Worksheet

Case: FRMR NCBC Davisville

SDG: N1914

VOA/SV-XIII

XIII. SAMPLE QUANTITATION AND % SOLIDS

Recalculate, from the raw data, the concentrations for one positive detect and one reported sample quantitation limit for a non-detect in a diluted sample or soil sample per fraction. (Note: Although NFG requires that one calculation for each fraction in each sample be performed, the validator is only required to reproduce an example, for each fraction, of one positive detect and one sample quantitation limit calculation on this worksheet.)

Do all soil/sediment samples have % solids greater than 30%?

Y N

If no, list sample numbers

Refer to EPA New England Data Review Supplemental Program guidance for actions related to %solids (Section 2.10).

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirements have been met.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

Good Morning Ed,

I have looked over the GRO/DRO data sent on Friday.

Since we are getting a few hits > the RIDEM 500 mg/kg DRO res DEC standard, we've decided to analyze all samples for GRO/DRO.

So, please analyze all soil samples submitted (including those currently on-hold).

If you can, please continue to send preliminary results for both waters and soils.... Getting a preliminary look at the data is extremely helpful.

Thanks very much for your time and support,

Lee Ann

PS THANKS MUCH TO JENNIFER AND AGNES FOR PITCHING IN LAST WEEK WHILE YOU WERE GONE!

Agree 100% with you.

Thanks - got your email yesterday but have a deadline of today.
Jeff

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1914

SW846 8015D GRO, Gasoline Range Organic (GRO) by GC-FID

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8015D GRO

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW5030B

Soil Samples were prepared following procedures in laboratory test code: SW5035

V. INSTRUMENTATION

The following instrumentation was used to perform

Instrument Code: V4
Instrument Type: GC-FID/PID
Description: HP5890 A
Manufacturer: Hewlett-Packard
Model: 5890
GC Column used: 30 m X 0.53 mm ID [um thickness] RTX-502.2
capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: 03SB0220204 (N1914-06BMS), 03SB0220204 (N1914-06BMSD), 03SB0230204 (N1914-28BMS) and 03SB0230204 (N1914-28BMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

NA.

F. Dilutions:

No sample in this SDG required analysis at dilution.

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

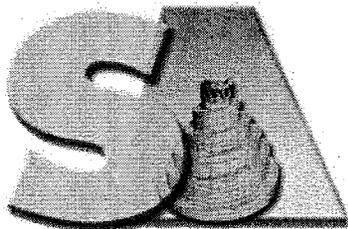

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Data Flag/Qualifiers (Page 1 of 2):

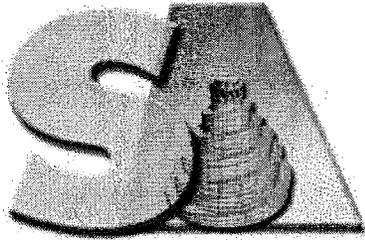

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.
- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.
- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

SPECTRUM ANALYTICAL, INC.

HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL** Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE** Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA** Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX** Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS** Matrix Spike.
- MSD** Matrix Spike Duplicate
- DUP** Duplicate analysis
- SD** Serial Dilution
- PS** Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1914

SW846 8015D TPH, Total Petroleum Hydrocarbons (TPH) by GC-FID

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times with the following exceptions:

03SS0220002 (N1914-05ARE) exceed by 1 Days

03SS0180002 (N1914-09ARE) exceed by 1 Days

03SS0190002 (N1914-13ARE) exceed by 1 Days

03SS0200002 (N1914-17ARE) exceed by 1 Days

Please note these samples were initially extracted within the method hold time. They were re-extracted due to surrogate recovery failures. Both sets of data are included in this report.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8015D TPH

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C

Soil Samples were prepared following procedures in laboratory test

code: SW3550B

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: F1

Instrument Type: GC-FID

Description: HP6890

Manufacturer: Hewlett-Packard

Model: 6890

GC Column used: 30 m X 0.32 mm ID [0.25 um thickness] Rtx-5MS capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits with the following exceptions. Please note that the acceptance criteria allow one surrogate recovery outside of the QC limits per fraction.

03SS0220002 (N1914-05A), recovery is below criteria for ortho-Terphenyl at 23% with criteria of (50-150).

03SS0180002 (N1914-09A), recovery is below criteria for ortho-Terphenyl at 29% with criteria of (50-150).

03SS0190002 (N1914-13A), recovery is below criteria for ortho-Terphenyl at 43% with criteria of (50-150).

03SS0200002 (N1914-17A), recovery is below criteria for ortho-Terphenyl at 32% with criteria of (50-150).

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC

limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: 03SB0220204 (N1914-06AMS), 03SB0220204 (N1914-06AMSD), 03SB0230204 (N1914-28AMS) and 03SB0230204 (N1914-28AMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Dilutions:

The following samples were analyzed at dilution:

03SS0220002 (N1914-05ARE) : Dilution Factor: 5

03SS0180002 (N1914-09ARE) : Dilution Factor: 5

F. Samples:

No other unusual occurrences were noted during sample analysis.

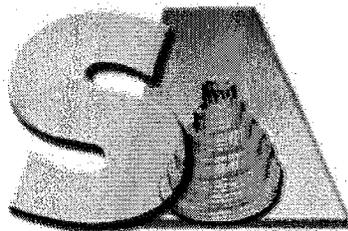

G. Manual Integration

No sample in this SDG were performed with manual integration.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'J. H. P.', written over a horizontal line.

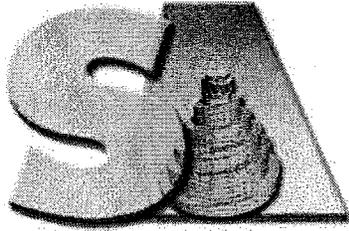

Signed: _____

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 1 of 2):

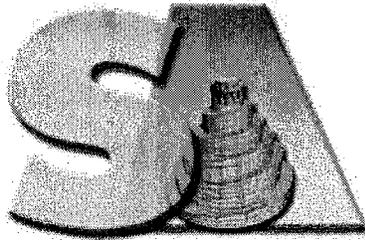

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.
- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.
- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

SPECTRUM ANALYTICAL, INC.

Featuring

HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL** Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE** Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA** Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX** Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS** Matrix Spike.
- MSD** Matrix Spike Duplicate
- DUP** Duplicate analysis
- SD** Serial Dilution
- PS** Post-digestion or Post-distillation spike. For metals or inorganic analyses

 Signal Info : 0.32

Compound	R.T.	Response	Conc Units
Internal Standards			
11) I 5a-Androstane	6.75	12152281	40.000 ug/mL
System Monitoring Compounds			
2) S ortho-Terphenyl	6.27	3983319	12.915 ug/mL
Spiked Amount	100.000	Recovery	= 12.91%
Target Compounds			
4) H TPH C9 to C40	1.30	1914681426	6586.067 ug/mL
Integration Range:		1.30 to 12.70 minutes	
Raw Range Area:		2078015087	
Corrected Range Area (IS,SS):		2061879487	
Instrument Blank Area (F1J3944):		147198061	

Corrected Range Area = Raw Range Area - Internal and Surrogate Area
 Reported Area = Corrected Range Area - Instrument Blank Area

(f)=RT Delta > 1/2 Window

(m)=manual int.

$$\frac{1914681426 \times 5}{290717 + 30.4 + 0.9697} = 1117 \text{ mg/kg}$$

$$\text{TPH (C9-C40)} = 1110 \text{ mg/kg}$$

TO: S. ANDERSON
SDG: N1931

PAGE 2

- * • Field Duplicate Precision
- * • Detection Limits
- * • Compound Identification and Quantification

The asterisk (*) indicates that all quality control criteria were met for this parameter. Qualified (if applicable) analytical results are summarized in Appendix A. Results as reported by the laboratory are presented in Appendix B. Appendix C contains Region I worksheets, and Appendix D contains the documentation to support the findings as discussed in this data validation report.

LCS/LCSD

The LCS/LCSD relative percent difference (RPD) for TPH (C9-C40) exceeded the quality control limit for batch 79725. No action was taken on this basis because the percent recoveries for the LCS and LCSD were acceptable.

ADDITIONAL COMMENTS

Sample 03SS0280002 was analyzed at a five-fold dilution due to a possible matrix interference.

Sample results were reported to the Limit of Detection (LOD).

EXECUTIVE SUMMARY

Laboratory Performance: None.

Other Factors Affecting Data Quality: None.

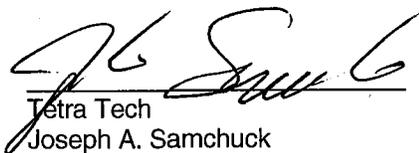

TO: S. ANDERSON
SDG: N1931

PAGE 3

The data for these analyses were reviewed with reference to the EPA Functional Guidelines for Organic Data Validation (June 2008), and the (DOD) QSM document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (July 2013).

- Appendix C – Regional Worksheets
- Appendix D – Support Documentation

APPENDIX A

QUALIFIED LABORATORY RESULTS

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e. chromatography, interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 standard deviations is greater than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed
- Z3 = Tentatively Identified Compound aldol condensate

APPENDIX C

REGIONAL WORKSHEETS

EPA-NE - Data Validation Worksheet

Case: FRMR NCRC DAYKVILLE

SDG: N1931

VOA/SV-II-A

II A. GC/MS INSTRUMENT PERFORMANCE CHECK – (TUNING)

Note: NOT for Selected Ion Monitoring (SIM) Analysis

List all Instrument Performance Checks that are outside method QC tuning acceptance criteria.

VOA Instrument Performance Check (Compound Name)	Analysis Date and Time	Instrument	Ions Affected	Percent Relative Abundance	QC Limits	Samples Affected	Action

Comments:

SV Instrument Performance Check (Compound Name)	Analysis Date and Time	Instrument	Ions Affected	Percent Relative Abundance	QC Limits	Samples Affected	Action

Comments:

If tuning compounds and criteria are different from those specified in CLP SOW SOM01.2, the validator should include a copy of the method-specific tuning criteria with this worksheet.

Validator: Edward Sedberry

Date: 11/20/14

SecDV Report

EPA-NE - Data Validation Worksheet

Case: FRMR NCBC Danville

SDG: N1931

Pest/PCB-II-A

II A. GC/ECD INSTRUMENT PERFORMANCE CHECK - Resolution - List all analytes that are outside resolution criteria.

RCM (Section II)	Date/Time	Instr.	Column	Compound	% Resolution	Samples Affected	Action
PEM (Section II and IV)							
INDA & B (Section III)							
INDA & B (Section IV)							

Validator: Edward Holbyer

Date: 11/20/14

See DU Report

EPA-NE - Data Validation Worksheet

Case: FRMR NCBC Davisville
VOA/SV/Pest/PCB-V-A
V. A. BLANK ANALYSIS

SDG: N1931

List the blank contamination below.

Concentration Level: _____

Sampler: _____ Company: _____ Contacted: Yes No Date: _____

1. Laboratory: Method, Storage and Instrument Blanks

Fraction/ Matrix	Sample ID (Blank Type)	Date Extracted	Date Analyzed	Instrument/ Column	Compound	Conc. (units)

2. Field: Equipment (Rinsate), Trip and Bottle Blanks

Fraction/ Matrix	Sample ID (Blank Type)	Date Extracted	Date Analyzed	Instrument/ Column	Compound	Conc. (units)

Validator: Edmund Lovelace

Date: 11/20/14

EPA-NE - Data Validation Worksheet

Case: FRMR NCBC DAVISVILLE

SDG: N1931

Pest/PCB-VII-A

VII A. PESTICIDE/PCB CLEANUP - GPC Calibration and Verification

The GPC Calibration data and GPC Calibration Verification Solution recovery data were reviewed and found to meet criteria.

Y N NA

If no, list the compounds and samples affected by the unacceptable GPC performance.

Date/Time of GPC Calibration or Calib. Verification	GC Analysis Date	Analyte	GPC % Resolution or RT Shift	% Rec	QC Limits	Samples Affected	Action

Were all target compounds less than QL for the GPC blank? Y N

Were acceptable GPC Calibration Verifications performed at the correct frequency? Y N

Were Aroclor patterns similar to those corresponding Aroclor standards of the Initial Calibration sequence? Y N

Action: Refer to National Functional Guidelines for the appropriate action to be taken. Comment on any action taken below:

Validator: Edward Sedberry

Date: 11/20/14

See DV Report

EPA-NE - Data Validation Worksheet

Case: FRMR NCBC Davisville

SDG: N1931

Pest/PCB-VII-B

VII B. PESTICIDE/PCB CLEANUP - Florisil Cartridge Performance Check

The Florisil Cartridge Performance Check recovery data were reviewed and found to meet criteria.

Y N

If no, list the analytes and samples affected by the unacceptable Florisil Cartridge Check.

Florisil Cartridge Lot #	Date of Florisil Cartridge Check	GC Analysis Date	Analyte	% Rec.	QC Limits	Samples Affected	Action

Were acceptable Florisil Cartridge Performance Checks performed at the correct frequency?

Y N

Action: Refer to Functional Guidelines for the appropriate action to be taken. Comment on any action taken below:

Validator: Edward Hediger

Date: 11/20/14

See DV Report

EPA-NE - Data Validation Worksheet

Case: FRMR NEBC Davisville

SDG: N1931

VOA/SV/Pest/PCB-VIII

VIII. MATRIX SPIKE/MATRIX SPIKE DUPLICATE - List all MS/MSD analytes that are outside method QC acceptance criteria. Use a separate worksheet for each MS/MSD pair.

Sample # _____

Matrix _____

Concentration Level _____

Fraction	Compound	Column 1			Column 2 ^a			Method QC Limits		Action
		MS % Rec.	MSD % Rec.	RPD	MS % Rec.	MSD % Rec.	RPD	% Recovery	RPD	

^a For Pest/PCB only.

Validator: Edward Hedlger

Date: 11/20/14

EPA-NE - Data Validation Worksheet

Case: FRMR NCBC Davisville

SDG: N1931

VOA/SV-XIII

XIII. SAMPLE QUANTITATION AND % SOLIDS

Recalculate, from the raw data, the concentrations for one positive detect and one reported sample quantitation limit for a non-detect in a diluted sample or soil sample per fraction. (Note: Although NFG requires that one calculation for each fraction in each sample be performed, the validator is only required to reproduce an example, for each fraction, of one positive detect and one sample quantitation limit calculation on this worksheet.)

Do all soil/sediment samples have % solids greater than 30%?

Y N

If no, list sample numbers

Refer to EPA New England Data Review Supplemental Program guidance for actions related to %solids (Section 2.10).

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirements have been met.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.

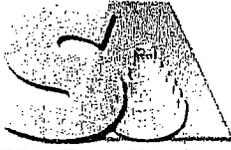

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

N1931 - ✓

Good Morning Ed,

I have looked over the GRO/DRO data sent on Friday.

Since we are getting a few hits > the RIDEM 500 mg/kg DRO res DEC standard, we've decided to analyze all samples for GRO/DRO.

So, please analyze all soil samples submitted (including those currently on-hold).

If you can, please continue to send preliminary results for both waters and soils.... Getting a preliminary look at the data is extremely helpful.

Thanks very much for your time and support,

Lee Ann

PS THANKS MUCH TO JENNIFER AND AGNES FOR PITCHING IN LAST WEEK WHILE YOU WERE GONE!

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1931

SW846 8015D GRO, Gasoline Range Organic (GRO) by GC-FID

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8015D GRO

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW5030B

Soil Samples were prepared following procedures in laboratory test code: SW5035

V. INSTRUMENTATION

The following instrumentation was used to perform

Instrument Code: V4
Instrument Type: GC-FID/PID
Description: HP5890 A
Manufacturer: Hewlett-Packard
Model: 5890
GC Column used: 30 m X 0.53 mm ID [um thickness] RTX-502.2
capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: 03SS0270002 (N1931-09BMS), 03SS0270002 (N1931-09BMSD), 03SS0320002 (N1931-30BMS) and 03SS0320002 (N1931-30BMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

NA.

F. Dilutions:

No sample in this SDG required analysis at dilution.

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

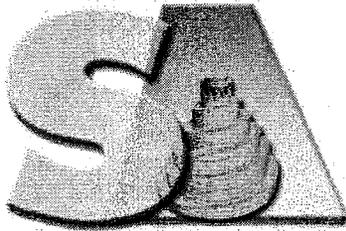

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 1 of 2):

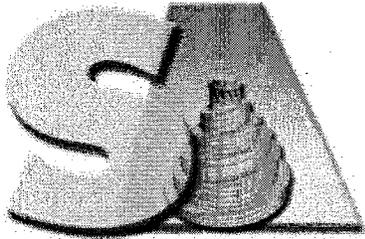

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.
- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.
- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Sample ID Suffixes

- DL** Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE** Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA** Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX** Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS** Matrix Spike.
- MSD** Matrix Spike Duplicate
- DUP** Duplicate analysis
- SD** Serial Dilution
- PS** Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N1931

SW846 8015D TPH, Total Petroleum Hydrocarbons (TPH) by GC-FID

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8015D TPH

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C
Soil Samples were prepared following procedures in laboratory test code: SW3550B

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: F1
Instrument Type: GC-FID

Description: HP6890
Manufacturer: Hewlett-Packard
Model: 6890
GC Column used: 30 m X 0.32 mm ID [0.25 um thickness] Rtx-5MS
capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: 03SS0270002 (N1931-09AMS), 03SS0270002 (N1931-09AMSD), 03SS0320002 (N1931-30AMS) and 03SS0320002 (N1931-30AMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Dilutions:

The following samples were analyzed at dilution:

03SS0280002 (N1931-04A) : Dilution Factor: 5

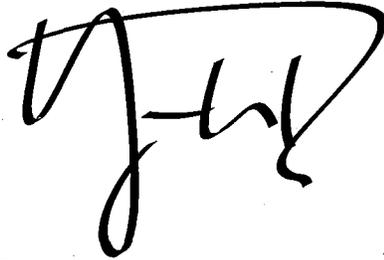

F. Samples:

No other unusual occurrences were noted during sample analysis.

G. Manual Integration

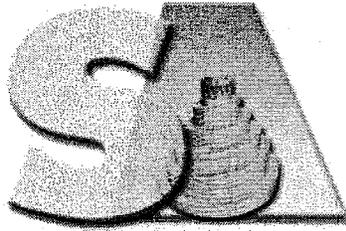

No sample in this SDG were performed with manual integration.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'J. H. L.', written over a horizontal line.

HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 1 of 2):

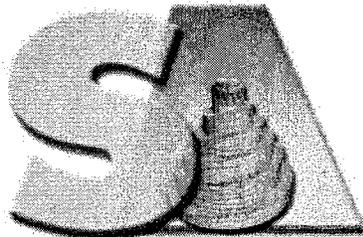

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

Sample ID Suffixes

- DL** Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE** Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA** Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX** Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS** Matrix Spike.
- MSD** Matrix Spike Duplicate
- DUP** Duplicate analysis
- SD** Serial Dilution
- PS** Post-digestion or Post-distillation spike. For metals or inorganic analyses

LABORATORY METHOD/PREPARATION BLANK ANALYSES

The following analytes were detected in the laboratory method and preparation blanks the following maximum concentrations:

<u>Analyte</u>	<u>Maximum Concentration (µg/L)</u>	<u>Action Level (µg/L)</u>
Zinc ⁽¹⁾	1.912	9.56
Aluminum ⁽²⁾	3.425	17.13
Beryllium ⁽²⁾	0.079	0.4
Cadmium ⁽²⁾	0.088	0.44
Calcium ⁽²⁾	28.622	143
Cobalt ⁽²⁾	0.096	0.48
Lead ⁽²⁾	0.081	0.41
Magnesium ⁽²⁾	24.24	121
Potassium ⁽²⁾	26.482	132
Silver ⁽²⁾	0.087	0.44
Thallium ⁽²⁾	0.129	0.65
Mercury ⁽³⁾	0.061	0.31

- (1) Maximum concentration found in the preparation blank from preparation batch # 79919 affecting all total and dissolved metal samples.
- (2) Maximum concentration found in the initial/continuing calibration blanks from analytical batch # 2190291 affecting all total and dissolved metal samples.
- (3) Maximum concentration found in the continuing calibration blanks from analytical batches #2191329 and #2191340 affecting all total and dissolved metal samples with the exception of the field blank, FB03-103014.

An action level of 5X the maximum contaminant concentration was established to evaluate blank contamination. Dilution factor and sample aliquot were taken into consideration during the application of the action level. Detected results below the established action level were qualified as non-detected, (U). Detections reported below the Limit of Detection (LOD) but above the Method Detection Limit (MDL) were raised to the LOD and qualified as non-detected, (U). The field blank was not qualified for laboratory blank contamination.

LABORATORY DUPLICATE RESULTS

The total and dissolved laboratory duplicate analysis performed on sample MW03-03Sa-NWG-103014 had a Percent Recoveries (%Rs) for zinc above the 20% quality control limit. All total and dissolved samples were affected. The detected results reported zinc not qualified for blank contamination in the affected samples were qualified as estimated, (J).

FIELD DUPLICATE PRECISION

The Relative Percent Difference (RPD) for zinc exceeded the 30% quality control limit in dissolved samples of the field duplicate pair, FD04-102914/MW03-01Sa-NWG-102914. In addition, the difference between the detected results in the total samples was greater than 2X the Limit of Quantitation (LOQ). All samples were affected. The detected results reported for zinc not qualified for blank contamination in the affected samples were qualified as estimated, (J).

TO: S. ANDERSON
SDG: N2027

PAGE 3

NOTES

Detected results reported above the MDL but below the LOQ were qualified as estimated, (J). Non-detected results are reported to the LOD.

EXECUTIVE SUMMARY

Laboratory Performance: Blank contamination was noted in the laboratory method and preparation blanks. The total and dissolved laboratory duplicate analyses had high %Rs for zinc.

Other Factors Affecting Data Quality: Field duplicate imprecision was noted for zinc.

The data for these analyses were reviewed with reference to the EPA New England Environmental Data Review Supplement for Regional Data Review Elements Superfund Guidance/Procedures (April 2013), National Functional Guidelines for Inorganic Data Validation (January 2010), and the Department of Defense (DoD) document entitled, "Quality Systems Manual (QSM) for Environmental Laboratories" (July 2013). The text of this report has been formulated to address only those problem areas affecting data quality.

APPENDIX A

QUALIFIED LABORATORY RESULTS

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e. chromatography, interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 standard deviations is greater than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed
- Z3 = Tentatively Identified Compound aldol condensate

APPENDIX C
REGIONAL WORKSHEETS

EPA-NE - Data Validation Worksheet

INORG-III-C/D

Case: _____

SDG: _____

III. CALIBRATIONS

see DV letter

C. Initial and Continuing Calibration Verifications - List all ICV and CCV analyte recoveries that are outside the method QC acceptance criteria.

ICV method QC acceptance criteria: _____ CCV method QC acceptance criteria: _____

Date/Time	Instrument ID	Analyte	ICV/CCV #	% R	Samples Affected	Action

D. Quantitation Limit Check Standard - List all QL Check Standard analytes that are outside method QC acceptance criteria (for non-CLP methods).

QL Check Standard method QC acceptance criteria: _____

Date	Instr.	Analyte	QL Check Std. #	% R	Affected Range	Samples Affected	Action

Comments: _____

EPA-NE - Data Validation Worksheet

INORG-III-A/B

Case: _____

SDG: _____

see DV letter

III. CALIBRATIONS

A. **Initial Calibration** - List all calibration correlation coefficients that are outside the method QC acceptance criteria and/or the y-intercept of the calibration curve that is >CRQL.

Calibration correlation QC acceptance criteria: _____

Calibration Type: _____

Date/Time	Instrument ID	Analyte	Correlation Coefficient	y-Intercept	CRQL	Samples Affected	Action

B. **Initial Calibration Standard Concentration Verifications** – Review CLP Form 16-IN and list all calculated %Ds that are >30 of the true value of any non-zero standard.

Date/time	Instrument ID	Analyte	True Conc.	Found Conc.	%D	Samples Affected	Action

Comments: _____

Validator: M. Allen

Date: 12/16/14

EPA-NE - Data Validation Worksheet

INORG-IV-C.1

Case: _____

IV. BLANKS

SDG: _____
 C.1 Blank Contamination Worksheet

see DV letter

Circle or list the highest concentration of each contaminant.

Analyte	Date Analyzed	ICB	CCB							PBW	PBS	EB	BB	Max. Conc.	CRQL
			1	2	3	4	5	6	7						
Aluminum															
Antimony

Zinc															
Cyanide															

Validator: M. Allen

Date: 12/16/14

EPA-NE - Data Validation Worksheet

INORG-XII

Case: _____

SDG: _____

XII. LABORATORY CONTROL SAMPLES

List all analytes that are outside criteria.

SDG No.: _____ Case: _____

see DV letter

Are more than one-half of the LCS analytes within criteria for each parameter and method? Y N

Date Prepared	Date Analyzed	Parameter/ Method	Matrix	Analyte	% Recovery (or Observed Conc.)	Method QC Acceptance Criteria	Samples Affected	Action
Comments:								

Validator: M. Allen

Date: 12/16/14

EPA-NE - Data Validation Worksheet

INORG-XIV

Case: _____

SDG: _____

XIV. ANALYTE QUANTITATION, REPORTED QUANTITATION LIMITS AND % SOLIDS

Recalculate, from the raw data, the concentrations for one positive detect and one reported sample quantitation limit for a non-detect in a diluted sample or soil sample per analytical method

Do all soil/sediment samples have % solids greater than 30%? Y N

see DV letter

- If no, were any steps employed to address the high moisture content? _____

- Indicate the action and list the affected sample nos.: _____

Refer to EPA New England Data Review Supplemental Program guidance for actions related to %solids (Section 2.10).

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N2027

SW846 6020A, SW846 7470A

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test codes:
SW846 6020A, SW846 7470A

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3005A

Aqueous Samples were prepared following procedures in laboratory test code: SW7470A

V. INSTRUMENTATION

The following instrumentation was used:

Instrument Code: FIMS2
Instrument Type: CVAA
Description: FIMS
Manufacturer: Perkin-Elmer
Model: FIMS100

Instrument Code: X1
Instrument Type: ICPMS
Description: X1
Manufacturer: ThermoFisher
Model: X-Series 2

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for laboratory control samples were within the QC limits.

2. Matrix spike (MS):

Matrix spikes were performed on samples: MW03-03SA-NWG-103014 (N2027-15CMS) and MW03-03SA-NWG-103014-F (N2027-16AMS).

Percent recoveries were within the QC limits.

D. Post Digestion Spike (PDS):

A post-digestion spike was not performed on any sample in this SDG.

E. Duplicate sample:

Duplicate analyses were performed on samples: MW03-03SA-NWG-103014 (N2027-15CDUP) and MW03-03SA-NWG-103014-F (N2027-16ADUP).

Relative percent differences were within the QC limits with the following exceptions:

MW03-03SA-NWG-103014 (N2027-15CDUP), Duplicate analysis not within control limit for Zinc.

MW03-03SA-NWG-103014-F (N2027-16ADUP-DISS), Duplicate analysis not within control limit for Zinc.

F. Serial Dilution (SD):

Serial Dilution analyses were performed on samples: MW03-03SA-NWG-103014 (N2027-15CSD) and MW03-03SA-NWG-103014-F (N2027-16ASD).

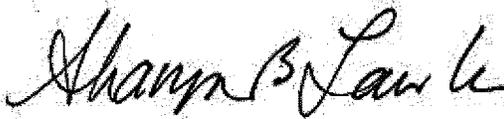

Percent differences were within the QC limits.

G. Samples:

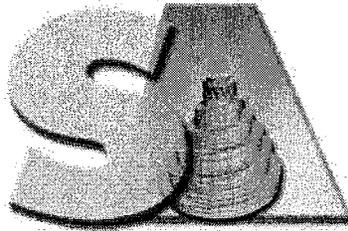

No other unusual occurrences were noted during sample analysis.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Date: 11/20/2014

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 1 of 2):

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

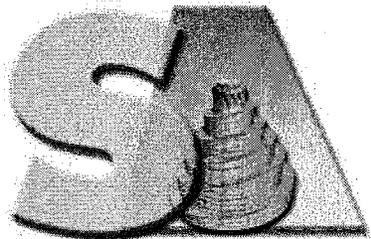

SPECTRUM ANALYTICAL, INC.

Featuring

HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.
- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.
- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

SPECTRUM ANALYTICAL, INC.

Featuring

HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL** Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE** Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA** Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX** Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS** Matrix Spike.
- MSD** Matrix Spike Duplicate
- DUP** Duplicate analysis
- SD** Serial Dilution
- PS** Post-digestion or Post-distillation spike. For metals or inorganic analyses

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirements have been met.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

- Surrogate Recoveries
- Laboratory Control Spike/Laboratory Control Spike Duplicate Results
- * • Matrix Spike/Matrix Spike Duplicate Results
- * • Internal Standards
- * • Field Duplicate Precision
- * • Compound Quantitation
- * • Compound Identification
- * • Detection Limits

The asterisk (*) indicates that all quality control criteria were met for this parameter. Qualified (if applicable) analytical results are summarized in Appendix A. Results as reported by the laboratory are presented in Appendix B. Appendix C contains Region I worksheets, and Appendix D contains the documentation to support the findings as discussed in this data validation report. The attached Table summarizes the validation qualifications which are based on the following information:

COMPOUND IDENTIFICATION

The laboratory reported that sample MW03-16I-NWG-102814 had a detection of GRO at a concentration of 130 ug/L. Upon inspection of the chromatogram associated with the VOC (8260B) analysis of this sample, it appears that TPH-related compounds were not detected in the VOC fraction; only chlorinated compounds were detected in the VOC analysis. Therefore, it is likely that the reported detection of GRO is wholly attributable to the chlorinated VOCs detected in the sample. The positive result for GRO in sample MW03-16I-NWG-102814 was rejected (R) on this basis. Chromatograms for both the VOC and GRO analysis are included in Appendix D.

BLANKS

The following SVOC compound was detected in the laboratory method blank at the following maximum concentration:

<u>Compound</u>	<u>Maximum Concentration</u>	<u>Action Level</u>
di-n-butylphthalate	2.2 ug/L	22 ug/L

An action level of 10x the maximum concentration of di-n-butylphthalate was used to evaluate sample concentrations for blank contamination. Sample aliquot and dilution factors, if applicable, were considered in evaluating for blank contamination. Positive results for di-n-butylphthalate less than the corresponding action level were qualified as non-detected (U) due to laboratory blank contamination. Di-n-butylphthalate was also detected in the field blank at a concentration of 4.1 ug/L; however, field blank results were not qualified due to laboratory method blank contamination.

CALIBRATIONS

The VOC initial calibration run on 10/31/14 on instrument DB-624 had a relative standard deviation (RSD) for bromoform that was greater than the quality control limit of 15%. Samples FD04-102914, MW01-13Sa-NWG-102714, MW02-06Sa-NWG-102914, MW03-01Sa-NWG-102914, MW03-16I-NWG-102814, TB10-102714, and TB11-102914 were affected by this calibration. Non-detected results for bromoform were qualified as estimated (U) in the affected samples.

The VOC continuing calibration run on 11/03/14 at 09:27 on instrument DB-624 had percent differences (%Ds) for bromomethane, trichlorofluoromethane, and 2-butanone that were outside of the $\pm 20\%$ quality control range.

TO: S. ANDERSON
DATE: 12/24/14

PAGE 3
SDG N2027

Samples FD04-102914, MW01-13Sa-NWG-102714, MW02-06Sa-NWG-102914, MW03-01Sa-NWG-102914, MW03-16I-NWG-102814, TB10-102714, and TB11-102914 were affected by this calibration. Non-detected results for these analytes were qualified as estimated (UJ) in the affected samples.

The VOC initial calibration performed on 11/07/14 on instrument DB-624 had RSDs greater than the 15% quality control limit for bromomethane, chloroethane, 2-butanone, trans-1,3-dichloropropene, 2-hexanone, styrene, and bromoform. The following samples were affected: FB03-103014, MW03-03Sa-NWG-103014, and TB12-103014. Non-detected results for these analytes were qualified as estimated (UJ) in the affected samples.

The SVOC initial calibration run on 11/11/14 on instrument Rxi-5sil MS had RSDs that were greater than the 15% quality control limit for 2-methylnaphthalene, hexachlorocyclopentadiene, 2,4-dinitrophenol, pentachlorophenol, and benzaldehyde. All SVOC samples were affected. Non-detected results for these analytes were qualified as estimated (UJ) in the affected samples.

The PEST initial calibration performed on 11/14/14 on instrument E6 had RSDs that were greater than the 15% quality control limit for delta-BHC on both columns. Sample FB03-103014 is associated with this calibration. The non-detected result for delta-BHC in sample FB03-103014 was qualified as estimated (UJ) on this basis.

SURROGATE RECOVERIES

Surrogate %Rs for decachlorobiphenyl (DCB) were less than laboratory acceptance limits on both columns for all PCB samples (FB03-103014, FD03-102814, and MW03-16I-NWG-102814). Non-detected PCB results were qualified as estimated (UJ) in the affected samples.

LABORATORY CONTROL SAMPLE

The PCB laboratory control sample (LCS) LCS-79913 had percent recoveries (%Rs) less than laboratory acceptance limits for Aroclor-1260. Sample FB03-103014 was affected. The non-detected result for Aroclor-1260 was qualified as estimated (UJ) in sample FB03-103014.

ADDITIONAL COMMENTS

The laboratory data package lists sample MW01-13Sa-NWG-102714 as MW01-13SU-NWG-102714. The sample name on the Form I reports was corrected by the data validator.

The laboratory data package initially excluded 1,2,3-trichlorobenzene and bromochloromethane from the VOC Form Is for several samples. The laboratory was contacted and supplied revised Form Is for these samples at a later date. The revised Form Is are included in this report.

The laboratory data package lists sample MW01-13Sa-NWG-102714 as MW01-13SU-NWG-102714. The sample name on the Form I reports was corrected by the data validator.

Sample MW03-16I-NWG-102814 was reanalyzed with a dilution factor of 3 because the result for trichloroethene exceeded the instrument calibration range in the original undiluted sample. The result for trichloroethene from the dilution was used for validation purposes, and results for all other analytes were reported from the original undiluted analysis.

The VOC continuing calibration run on 11/04/14 at 10:00 on instrument DB-624 had %Ds for acetone and 4-methyl-2-pentanone that were outside of the $\pm 20\%$ quality control range. The dilution of sample MW03-16I-NWG-102814 was affected. No qualification was necessary because only the result for trichloroethene from this analysis was used for validation.

TO: S. ANDERSON
DATE: 12/24/14

PAGE 4
SDG N2027

Methylene chloride was detected in the VOC field blank FB03-103014 at a concentration of 1.5 ug/L. No action was taken on this basis.

The laboratory data package initially excluded the SVOC analyte 1,3-dinitrobenzene. The laboratory was contacted, and the laboratory revised the data package to scan for 1,3-dinitrobenzene as a tentatively identified compound (TIC). 1,3-Dinitrobenzene was not detected. The associated forms from the revised data package are included in Appendix D.

The SVOC laboratory control sample duplicate (LCSD) LCSD-79838 had percent a relative percent difference (RPD) for 4-nitrophenol that was greater than the laboratory quality control limit. All SVOC samples were associated with this LCSD. No action was necessary because associated sample results were non-detected for all analytes and the laboratory control sample (LCS) and LCSD %Rs were compliant.

Di-n-butylphthalate was detected in the SVOC field blank FB03-103014 at a concentration of 4.1 ug/L. No action was taken on this basis.

The PEST initial calibration performed on 11/14/14 on instrument E6 had an RSD that was greater than the 15% quality control limit for 4,4'-DDD on the primary column. Sample FB03-103014 is associated with this calibration. No action was necessary because the result for 4,4'-DDD was non-detected in the affected sample and the secondary column was compliant.

The PEST continuing calibration performed on 11/14/14 at 00:07 on instrument E6 had a %D that was greater than the $\pm 20\%$ quality control limit for 4,4'-DDT on the secondary column. Sample FB03-103014 is associated with this calibration. No action was necessary because the result for 4,4'-DDT was non-detected in the affected sample and the primary column was compliant.

The laboratory re-extracted and re-analyzed PCB sample FB03-103014 seven (7) days outside of the extraction holding time limit due to quality control noncompliances. No action was necessary on this basis because results from the original analysis were used for validation purposes.

Positive results for SVOCs reported between the detection limit and the quantitation limit were qualified as estimated (J) due to uncertainty near the detection limit.

EXECUTIVE SUMMARY

Laboratory Performance Issues: Some VOC, SVOC, and PEST results were qualified due to calibration noncompliances. Results for one SVOC analyte were qualified as non-detected due to laboratory blank contamination. PCB results were qualified due to surrogate recovery noncompliance, and results for one PCB analyte were qualified due to LCS noncompliance.

Other Factors Affecting Data Quality: Some SVOC results between the detection limit and the quantitation limit were qualified as estimated.

The data for these analyses were reviewed with reference to the USEPA National Functional Guidelines for Organic Data Review (June 2008) and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (July 2013). The text of this report has been formulated to address only those problem areas affecting data quality.

- Appendix C – Regional Worksheets
- Appendix D – Support Documentation

APPENDIX A

QUALIFIED ANALYTICAL RESULTS

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e. chromatography, interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 standard deviations is greater than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed
- Z3 = Tentatively Identified Compound aldol condensate

See DU Report

Case: 01813

SDG: N2027

VOA/SV-II-A

II A. GC/MS INSTRUMENT PERFORMANCE CHECK - (TUNING)

Note: NOT for Selected Ion Monitoring (SIM) Analysis

List all Instrument Performance Checks that are outside method QC tuning acceptance criteria.

VOA Instrument Performance Check (Compound Name)	Analysis Date and Time	Instrument	Ions Affected	Percent Relative Abundance	QC Limits	Samples Affected	Action

Comments:

SV Instrument Performance Check (Compound Name)	Analysis Date and Time	Instrument	Ions Affected	Percent Relative Abundance	QC Limits	Samples Affected	Action

Comments:

If tuning compounds and criteria are different from those specified in CLP SOW SOM01.2, the validator should include a copy of the method-specific tuning criteria with this worksheet.

Validator: Zc

Date: 12/10/14

EPA-NE - Data Validation Worksheet

See DV Report

Case: 01813

SDG: N2027

VOA/SV-II-B

II B. GC/MS INSTRUMENT PERFORMANCE CHECK - 12-hour clock

List all Instrument Performance Checks and/or calibration standards that were analyzed beyond the 12-hour requirement.

Fraction (VOA or SV)	Tune Standard or CCV ID	Injection Date and Time	Time Elapsed (hours)	Samples Affected	Action

Validator: Lu

Date: 12/10/14

Case: 01813

SDG: N2027

See DU Report

Pest/PCB-II-A

II A. GC/ECD INSTRUMENT PERFORMANCE CHECK - Resolution - List all analytes that are outside resolution criteria.

RCM (Section II)	Date/Time	Instr.	Column	Compound	% Resolution	Samples Affected	Action
PEM (Section II and IV)							
INDA & B (Section III)							
INDA & B (Section IV)							

Validator: Lc

Date: 12/10/14

Case: 01813

SDG: N2027

See DV Report

Pest/PCB-III

III. INITIAL CALIBRATION - List all analytes that are outside calibration criteria.

INDA/INDB, INDC, or Multicomponent	Date	Instrument	Column	Analytes	Recalculated RT Window	%RSD	Samples Affected	Action
A. % RSD Linearity								
B. Retention Time Windows								

Did the laboratory follow the correct analytical sequence? Y N

Did the laboratory analyze the initial calibration at the appropriate concentration levels? Y N

Validator: yc

Date: 12/10/14

See DU Report

Case: D1813

SDG: N2027

VOA/SV/Pest/PCB-V-A
V. A. BLANK ANALYSIS

List the blank contamination below.

Concentration Level:

Sampler: Company: Contacted: Yes No Date:

1. Laboratory: Method, Storage and Instrument Blanks

Fraction/ Matrix	Sample ID (Blank Type)	Date Extracted	Date Analyzed	Instrument/ Column	Compound	Conc. (units)

2. Field: Equipment (Rinsate), Trip and Bottle Blanks

Fraction/ Matrix	Sample ID (Blank Type)	Date Extracted	Date Analyzed	Instrument/ Column	Compound	Conc. (units)

Validator: Jc

Date: 12/10/14

See DV Report

Case: 01813

SDG: N2027

Pest/PCB-VII-A

VII A. PESTICIDE/PCB CLEANUP - GPC Calibration and Verification

The GPC Calibration data and GPC Calibration Verification Solution recovery data were reviewed and found to meet criteria.

Y N NA

If no, list the compounds and samples affected by the unacceptable GPC performance.

Date/Time of GPC Calibration or Calib. Verification	GC Analysis Date	Analyte	GPC % Resolution or RT Shift	% Rec	QC Limits	Samples Affected	Action

Were all target compounds less than QL for the GPC blank? Y N

Were acceptable GPC Calibration Verifications performed at the correct frequency? Y N

Were Aroclor patterns similar to those corresponding Aroclor standards of the Initial Calibration sequence? Y N

Action: Refer to National Functional Guidelines for the appropriate action to be taken. Comment on any action taken below:

Validator: *Li*

Date: 12/10/14

See DV Report

EPA-NE - Data Validation Worksheet

Case: 01813

SDG: N2027

Pest/PCB-VII-B

VII B. PESTICIDE/PCB CLEANUP - Florisil Cartridge Performance Check

The Florisil Cartridge Performance Check recovery data were reviewed and found to meet criteria.

Y N

If no, list the analytes and samples affected by the unacceptable Florisil Cartridge Check.

Florisil Cartridge Lot #	Date of Florisil Cartridge Check	GC Analysis Date	Analyte	% Rec.	QC Limits	Samples Affected	Action

Were acceptable Florisil Cartridge Performance Checks performed at the correct frequency?

Y N

Action: Refer to Functional Guidelines for the appropriate action to be taken. Comment on any action taken below:

Validator: De

SDG: N2027

VOA/SV/Pest/PCB-IX

IX. FIELD DUPLICATE PRECISION - List all field duplicate analytes that are outside criteria.
Use a separate worksheet for each field duplicate pair.

Sample Number _____ Duplicate Sample Number _____ Matrix _____

Fraction	Compound	Sample Conc.	Sample QL		Duplicate Conc.	Duplicate QL		RPD	QC Acceptance Criteria RPD or NA	Action
			SQL	2xSQL		SQL	2xSQL			

*For instances where one duplicate result is ND (or reported less than the sample QL).

Does the MS/MSD data indicate acceptable laboratory precision? Y N

Refer to EPA New England Data Review Program Supplemental guidance for field duplicate actions (Section 2.8).
Comments: _____

Sampler Name: _____ Contractor Name: _____ Date Contacted: _____

Reason for Contact and resolution obtained: _____

Validator: pc

Date: 12/10/14

See DV Report

Case: 01813

SDG: N2027

VOA/SV-XIII

XIII. SAMPLE QUANTITATION AND % SOLIDS

Recalculate, from the raw data, the concentrations for one positive detect and one reported sample quantitation limit for a non-detect in a diluted sample or soil sample per fraction. (Note: Although NFG requires that one calculation for each fraction in each sample be performed, the validator is only required to reproduce an example, for each fraction, of one positive detect and one sample quantitation limit calculation on this worksheet.)

Do all soil/sediment samples have % solids greater than 30%?

Y N

If no, list sample numbers

Refer to EPA New England Data Review Supplemental Program guidance for actions related to %solids (Section 2.10).

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N2027

SW846 8260C, VOC by GC-MS

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8260C

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW5030B

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: V10
Instrument Type: GCMS-VOA

Description: HP7890A
Manufacturer: Agilent
Model: 7890A / 5975C
GC Column used: 30 m X 0.25 mm ID [1.40 um thickness] DB-624
capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: MW03-03SA-NWG-103014 (N2027-15AMS) and MW03-03SA-NWG-103014 (N2027-15AMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

Internal standard peak areas were within the QC limits.

F. Dilutions:

The following samples were analyzed at dilution:

MW03-16I-NWG-102814 (N2027-04BDL) : Dilution Factor: 3

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

Manual integration was performed on the following:

LCS-79801 2-Butanone due to M6

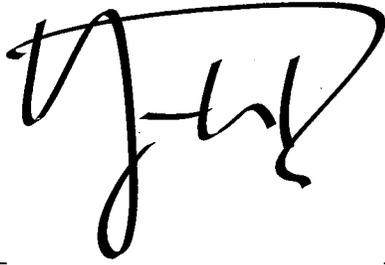

VSTD00110D Bromomethane due to M3

VSTD00510Y 2-Butanone due to M6

VSTD02010Y 2-Butanone due to M6

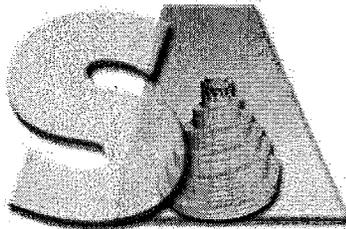

VSTD05010Y 2-Butanone due to M6

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'J. H. P.', written in a cursive style.

HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 1 of 2):

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

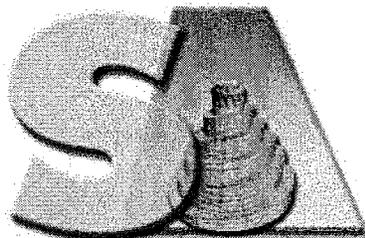

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

SPECTRUM ANALYTICAL, INC.

Featuring

HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS Matrix Spike.
- MSD Matrix Spike Duplicate
- DUP Duplicate analysis
- SD Serial Dilution
- PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N2027

SW846 8270D, SVOA by GC-MS

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8270D

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: S6
Instrument Type: GCMS-Semi

Description: HP7890A
Manufacturer: Agilent
Model: 7890A/5973

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

No client-requested MS/MSD analyses were included in this SDG.

E. Internal Standards:

Internal standard peak areas were within the QC limits.

F. Dilutions:

No sample in this SDG required analysis at dilution.

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes

are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

Manual integrations were performed on the following:

LCSD-79838 4-Nitrophenol due to M6

SSTD0056V 2,4-Dinitrophenol due to M6

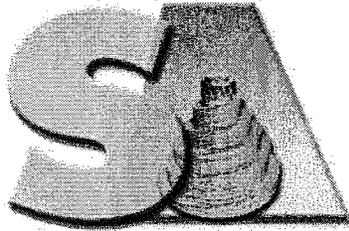

SSTD0106V 4-Nitrophenol due to M6

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'J. H. L.', written over a horizontal line.

Signed: _____

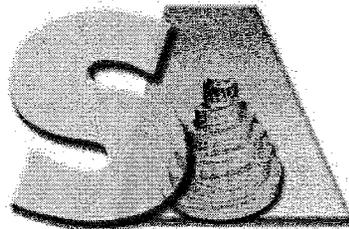

Date: _____ 11/20/2014 _____

Data Flag/Qualifiers (Page 1 of 2):

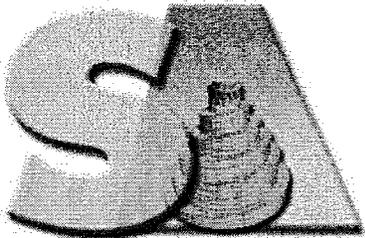

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.
- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.
- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

SPECTRUM ANALYTICAL, INC.

Featuring

HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS Matrix Spike.
- MSD Matrix Spike Duplicate
- DUP Duplicate analysis
- SD Serial Dilution
- PS Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N2027

SW846 8270D SIM, SVOA by GC-MS

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8270D SIM

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: S6
Instrument Type: GCMS-Semi

Description: HP7890A
Manufacturer: Agilent
Model: 7890A/5973

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: MW03-03SA-NWG-103014 (N2027-15BMS) and MW03-03SA-NWG-103014 (N2027-15BMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

Internal standard peak areas were within the QC limits.

F. Dilutions:

No sample in this SDG required analysis at dilution.

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

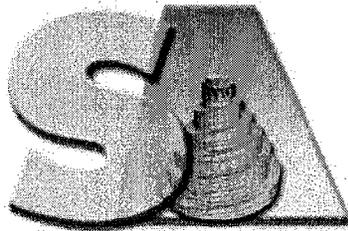

No manual integrations were performed on any sample or standard.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'J. H. L.', written over a horizontal line.

Signed: _____

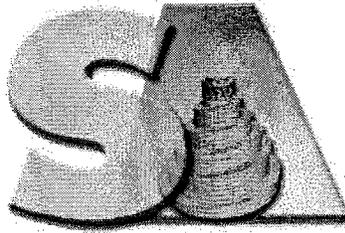

Date: _____ 11/20/2014 _____

SPECTRUM ANALYTICAL, INC.

Data Flag/Qualifiers (Page 1 of 2):

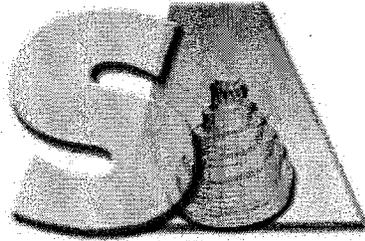

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.
- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.
- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

SPECTRUM ANALYTICAL, INC.

Featuring

HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL** Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE** Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA** Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX** Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS** Matrix Spike.
- MSD** Matrix Spike Duplicate
- DUP** Duplicate analysis
- SD** Serial Dilution
- PS** Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N2027

SW846 8081B, Organochlorine Pesticides by GC-ECD

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8081B

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: E6
Instrument Type: GC-ECD
Description: HP6890
Manufacturer: Hewlett-Packard

Model: 6890

GC Column used: 30 m X 0.53 mm ID [0.50 um thickness] CLPPest capillary column.

GC Column used: 30 m X 0.53 mm ID [0.42 um thickness] CLPPestII capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

No client-requested MS/MSD analyses were included in this SDG.

E. Dilutions:

No sample in this SDG required analysis at dilution.

F. Samples:

The lower concentration between the primary and confirmatory GC column concentrations is reported due to the presence of interferences unless otherwise indicated. P flags are assigned to compounds when D% between the two columns are greater than 40%.

No other unusual occurrences were noted during sample analysis.

G. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

The following samples were manually integrated:

TOXAPH1F6 Toxaphene on front column , Toxaphene on rear column due to M3

TOXAPH2F6 Toxaphene on front column , Toxaphene on rear column due to M3

TOXAPH3F6 Toxaphene on front column , Toxaphene on rear column due to M3

TOXAPH4F6 Toxaphene on front column due to M3

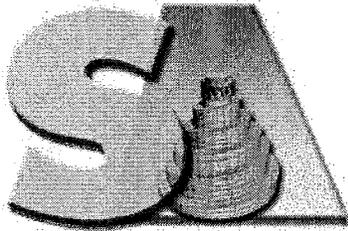

TOXAPH5F6 Toxaphene on front column , Decachlorobiphenyl on rear column , Toxaphene on rear column due to M3

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'J. H. P.', written over a horizontal line.

Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 1 of 2):

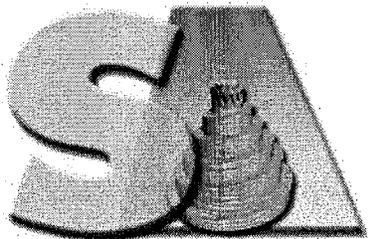

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.
- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.
- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

SPECTRUM ANALYTICAL, INC.

Featuring

HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL** Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE** Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA** Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX** Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS** Matrix Spike.
- MSD** Matrix Spike Duplicate
- DUP** Duplicate analysis
- SD** Serial Dilution
- PS** Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N2027

SW846 8082A, PCB by GC-ECD

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times with the following exceptions:

FB03-103014 (N2027-17BRE) exceed by 7 Days

Please note this sample was initially extracted within method hold time. It was re-extracted due to batch QC failures. Both sets of data are included in this report.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8082A

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: E2
Instrument Type: GC-ECD
Description: HP5890 II +
Manufacturer: Hewlett-Packard
Model: 5890
GC Column used: 30 m X 0.53 mm ID [0.50 um thickness] CLPPest
capillary column.
GC Column used: 30 m X 0.53 mm ID [0.42 um thickness] CLPPestII
capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits with the following exceptions. Please note that the acceptance criteria allow one surrogate recovery outside of the QC limits per fraction.

(LCS-79913), recovery is below criteria for Decachlorobiphenyl on rear column at 16% with criteria of (40-135), Decachlorobiphenyl on front column at 16% with criteria of (40-135), Tetrachloro-m-xylene on rear column at 24% with criteria of (34-137) and Tetrachloro-m-xylene on front column at 23% with criteria of (34-137).

MW03-16I-NWG-102814 (N2027-04C), recovery is below criteria for Decachlorobiphenyl on rear column at 34% with criteria of (40-135) and Decachlorobiphenyl on front column at 34% with criteria of (40-135).

FD03-102814 (N2027-06A), recovery is below criteria for Decachlorobiphenyl on rear column at 39% with criteria of (40-135) and Decachlorobiphenyl on front column at 40% with criteria of (40-135).

FB03-103014 (N2027-17B), recovery is below criteria for Decachlorobiphenyl on rear column at 23% with criteria of (40-135) and Decachlorobiphenyl on front column at 23% with criteria of (40-135).

FB03-103014 (N2027-17BRE), recovery is below criteria for Decachlorobiphenyl on rear column at 38% with criteria of (40-135) and Decachlorobiphenyl on front column at 39% with criteria of (40-135).

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits with the following exceptions. Please note that most test procedures allow for several compounds outside of the QC limits for the LCS, although this may indicate a bias for this specific compound.

LCS-79913 in batch 79913, recovery is below criteria for Aroclor-1260 on rear column at 25% with criteria of (30-145) and Aroclor-1260 on front column at 26% with criteria of (30-145).

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

No client-requested MS/MSD analyses were included in this SDG.

E. Dilutions:

No sample in this SDG required analysis at dilution.

F. Samples:

The lower concentration between the primary and confirmatory GC column concentrations is reported due to the presence of interferences unless otherwise indicated. P flags are assigned to compounds when D% between the two columns are greater than 40%.

No other unusual occurrences were noted during sample analysis.

G. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting

- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

The following samples were manually integrated:

AR12211L2 Decachlorobiphenyl on front column due to M3

AR12326L2 Decachlorobiphenyl on front column due to M3

AR12485L2 Decachlorobiphenyl on front column , Tetrachloro-m-xylene on front column due to M3

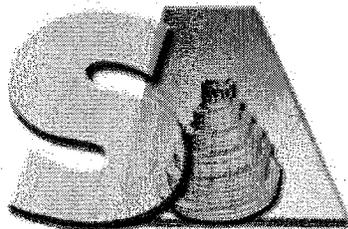

AR12486L2 Decachlorobiphenyl on front column due to M3

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Data Flag/Qualifiers (Page 1 of 2):

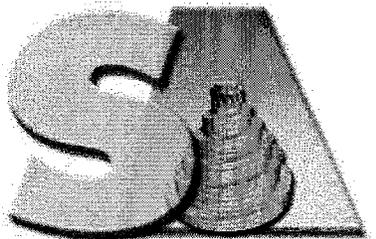

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.
- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.
- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL** Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE** Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA** Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX** Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS** Matrix Spike.
- MSD** Matrix Spike Duplicate
- DUP** Duplicate analysis
- SD** Serial Dilution
- PS** Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N2027

SW846 8015D GRO, Gasoline Range Organic (GRO) by GC-FID

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8015D GRO

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW5030B

V. INSTRUMENTATION

The following instrumentation was used to perform

Instrument Code: V4
Instrument Type: GC-FID/PID

Description: HP5890 A
Manufacturer: Hewlett-Packard
Model: 5890
GC Column used: 30 m X 0.53 mm ID [um thickness] RTX-502.2
capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: MW03-03SA-NWG-103014 (N2027-15AMS) and MW03-03SA-NWG-103014 (N2027-15AMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

NA.

F. Dilutions:

No sample in this SDG required analysis at dilution.

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

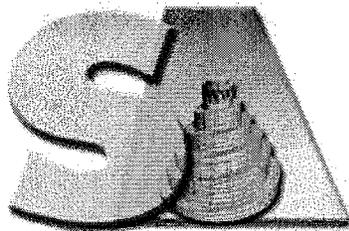

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'J. H. L.', written over a horizontal line.

Signed: _____

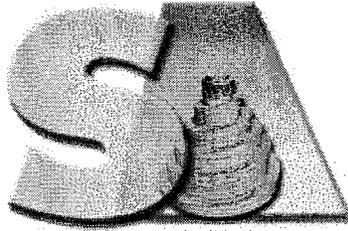

Date: _____ 11/20/2014 _____

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 1 of 2):

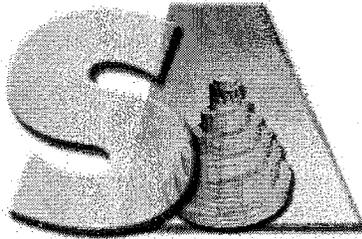

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.
- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.
- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

SPECTRUM ANALYTICAL, INC.

Featuring

HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL** Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE** Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA** Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX** Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS** Matrix Spike.
- MSD** Matrix Spike Duplicate
- DUP** Duplicate analysis
- SD** Serial Dilution
- PS** Post-digestion or Post-distillation spike. For metals or inorganic analyses

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville

Laboratory Workorder / SDG #: N2027

SW846 8015D TPH, Total Petroleum Hydrocarbons (TPH) by GC-FID

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8015D TPH

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW3510C

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: F1
Instrument Type: GC-FID
Description: HP6890
Manufacturer: Hewlett-Packard

Model: 6890
GC Column used: 30 m X 0.32 mm ID [0.25 um thickness] Rtx-5MS
capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: MW03-03SA-NWG-103014 (N2027-15BMS) and MW03-03SA-NWG-103014 (N2027-15BMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Dilutions:

No sample in this SDG required analysis at dilution.

F. Samples:

No other unusual occurrences were noted during sample analysis.

G. Manual Integration

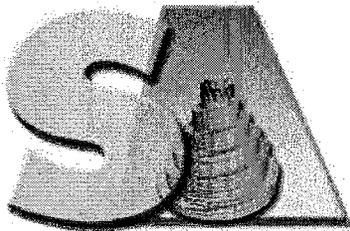

No sample in this SDG were performed with manual integration.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'T. J. H.', written over a horizontal line.

HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 1 of 2):

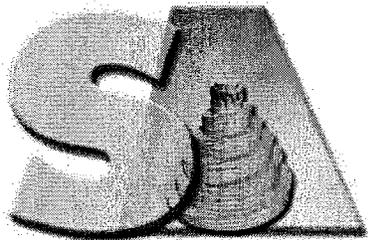

- U Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a “trace” concentration below the reporting limit and equal to or above the detection limit.
- D For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.
- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.
- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

SPECTRUM ANALYTICAL, INC.

Featuring

HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL** Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE** Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA** Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX** Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS** Matrix Spike.
- MSD** Matrix Spike Duplicate
- DUP** Duplicate analysis
- SD** Serial Dilution
- PS** Post-digestion or Post-distillation spike. For metals or inorganic analyses

PAGE 2

The VOC continuing calibration performed on 11/24/14 @ 09:04 had a Percent Difference (%D) for acetone above the 20% quality control limit. FD05-111914 and TB13-111914 were affected. The non-detected results reported for acetone in the affected samples were qualified as estimated, (UJ).

The VOC continuing calibration performed on 11/25/14 @ 08:16 had a %D for dichlorodifluoromethane above the 20% quality control limit. The non-detected result reported for this compound in the affected sample, MW02-03S-NWG-111914, was qualified as estimated, (UJ).

NOTES

Detected results reported for trichlorofluoromethane below the Limit of Quantitation (LOQ) but above the Detection Limit (DL) were qualified as estimated, (J). Non-detected results are reported to the Limit of Detection (LOD).

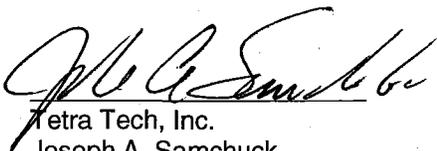

EXECUTIVE SUMMARY

Laboratory Performance: Initial calibration %RSDs exceeded 20% in the VOC fraction. Continuing calibration %Ds were above 20% in the VOC.

Other Factors Affecting Data Quality: Detected results below the LOQ were estimated.

The data for these analyses were reviewed with reference to the EPA New England Environmental Data Review Supplement for Regional Data Review Elements Superfund Guidance/Procedures (April 2013), National Functional Guidelines for Organic Data Validation (January 2008), National Functional Guidelines for Inorganic Data Validation (January 2010), and the Department of Defense (DoD) document entitled, "Quality Systems Manual (QSM) for Environmental Laboratories" (July 2013). The text of this report has been formulated to address only those areas affecting data quality.

3. Appendix C - Regional Worksheets
4. Appendix D - Support Documentation

APPENDIX A

QUALIFIED LABORATORY RESULTS

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times \text{IDL}$ for inorganics and $< \text{CRQL}$ for organics)
- Q = Other problems (can encompass a number of issues; i.e. chromatography, interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $> 40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $< 30\%$
- Z = Uncertainty at 2 standard deviations is greater than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed
- Z3 = Tentatively Identified Compound aldol condensate

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville, resample

Laboratory Workorder / SDG #: N2224

SW846 8260C, VOC by GC-MS

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8260C

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW5030B

V. INSTRUMENTATION

The following instrumentation was used

Instrument Code: V10
Instrument Type: GCMS-VOA

Description: HP7890A
Manufacturer: Agilent
Model: 7890A / 5975C
GC Column used: 30 m X 0.25 mm ID [1.40 um thickness] DB-624
capillary column.

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: MW02-03S-NWG-111914 (N2224-02AMS) and MW02-03S-NWG-111914 (N2224-02AMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

Internal standard peak areas were within the QC limits.

F. Dilutions:

No sample in this SDG required analysis at dilution.

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

Manual integration was performed on the following:

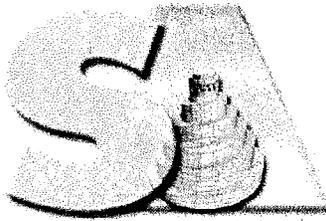

VSTD05010Q 2-Hexanone due to M6

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

Date: _____ 12/8/2014 _____

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 1 of 2):

- U** Not Detected. This compound was analyzed-for but not detected. For most analyses the reporting limit (lowest standard concentration) is the value listed. For Department of Defense programs, this is the Limit of Detection (LOD).
- J** This flag indicates an estimated value due to either
- the compound was detected below the reporting limit, or
 - estimated concentration for Tentatively Identified Compound
- B** This flag indicates the compound was also detected in the associated Method Blank. The B flag has an alternative meaning for Inorganics analyses reported using CLP ILM-type metals forms, indicating a "trace" concentration below the reporting limit and equal to or above the detection limit.
- D** For Organics analysis, this flag indicates the compound concentration was obtained from a secondary dilution analysis
- E** This flag indicates the compound concentration exceeded the Calibration Range. The E flag has an alternative meaning for Inorganics analyses reported using CLP metals forms, indicating an estimated concentration due to the presence of interferences, as determined by the serial dilution analysis.
- P** This flag is used for pesticides/PCB/herbicide compound when there is a greater than 40% difference for detected concentration between the two GC columns used for primary and confirmation analyses. This difference typically indicates interference, causing one value to be unusually high. The **lower** of the two values is generally reported on the Form 1, and both values reported on the Form 10.
- A** Used to flag semivolatile organic Tentatively Identified Compound library search results for compounds identified as an aldol condensation by-product.

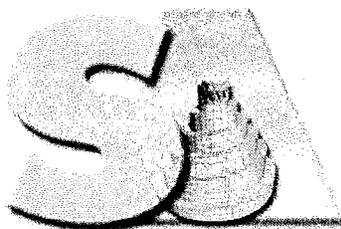

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Data Flag/Qualifiers (Page 2 of 2):

- N Used to flag results for volatile and semivolatile Organics analysis Tentatively Identified Compounds where an analyte has passed the identification criteria, and is considered to be positively identified. For Inorganics analysis the N flag indicates the matrix spike recovery falls outside of the control limit.

- * For Inorganics analysis the * flag indicates Relative Percent Difference for duplicate analyses is outside of the control limit.

- L NYSDEC qualifier: Result is biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

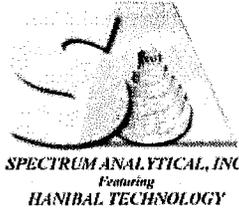

SPECTRUM ANALYTICAL, INC.
Featuring
HANIBAL TECHNOLOGY

Sample ID Suffixes

- DL** Diluted analysis. The sample was diluted and reanalyzed. The DL may be followed by a digit if more than one diluted reanalysis is provided. The DL suffix is not attached to an analysis initially performed at dilution, only to reanalyses performed at dilution
- RE** Reanalysis. Appended to the client sample ID to indicate a reextraction and reanalysis or a reanalysis of the original sample extract.
- RA** Reanalysis. Appended to the laboratory sample ID indicates a reanalysis of the original sample extract.
- RX** Reextraction. Appended to the laboratory sample ID indicates a reextraction of the sample.
- MS** Matrix Spike.
- MSD** Matrix Spike Duplicate
- DUP** Duplicate analysis
- SD** Serial Dilution
- PS** Post-digestion or Post-distillation spike. For metals or inorganic analyses

I attest that the information contained within the report has been reviewed for accuracy and checked against the quality control requirements for each method. The results relate only to the samples(s) as received. This report may not be reproduced, except in full, without written approval from Spectrum Analytical.

All applicable NELAC or USEPA CLP requirements have been met.

Spectrum Analytical (Rhode Island) is accredited under the National Environmental Laboratory Approval Program (NELAP) and DoD Environmental Laboratory Accreditation Program (ELAP), holds Organic and Inorganic contracts under the USEPA CLP Program and is certified under several states. The current list of our laboratory approvals and certifications is available on the Certifications page on our web site at www.spectrum-analytical.com.

Please contact the Laboratory or Technical Director at 401-732-3400 with any questions regarding the data contained in the laboratory report.

Column to be used to flag recovery and RPD values with an asterisk

* Values outside of QC limits

RPD: 0 out of 50 outside limits

Spike Recovery: 0 out of 100 outside limits

COMMENTS: _____

REPORT NARRATIVE

Spectrum Analytical, Inc. Featuring Hanibal Technology, RI Division.

Client : Tetra Tech, Inc.

Project: CED Area, WE01-Davisville, resample

Laboratory Workorder / SDG #: N2224

SW846 8015D GRO, Gasoline Range Organic (GRO) by GC-FID

I. SAMPLE RECEIPT

No exceptions or unusual conditions were encountered unless a Sample Condition Notification Form, or other record of communication is included with the Sample Receipt Documentation.

II. HOLDING TIMES

A. Sample Preparation:

All samples were prepared within the method-specified holding times.

B. Sample Analysis:

All samples were analyzed within the method-specified holding times.

III. METHODS

Samples were analyzed following procedures in laboratory test code:
SW846 8015D GRO

IV. PREPARATION

Aqueous Samples were prepared following procedures in laboratory test code: SW5030B

V. INSTRUMENTATION

The following instrumentation was used to perform

Instrument Code: V4
Instrument Type: GC-FID/PID

Description: HP5890 A
Manufacturer: Hewlett-Packard
Model: 5890

VI. ANALYSIS

A. Calibration:

Calibrations met the method/SOP acceptance criteria.

B. Blanks:

All method blanks were within the acceptance criteria.

C. Surrogates:

Surrogate standard percent recoveries were within the QC limits.

D. Spikes:

1. Laboratory Control Spikes (LCS):

Percent recoveries for lab control samples were within the QC limits.

2. Matrix Spike / Matrix Spike Duplicate (MS/MSD):

Matrix spikes were performed on samples: MW02-03S-NWG-111914 (N2224-02AMS) and MW02-03S-NWG-111914 (N2224-02AMSD).

Percent recoveries were within the QC limits.

Replicate RPDs were within the advisory QC limits.

E. Internal Standards:

NA.

F. Dilutions:

No sample in this SDG required analysis at dilution.

G. Samples:

No other unusual occurrences were noted during sample analysis.

H. Manual Integration

Where needed, manual integrations were performed to improve data quality. The corrections were reviewed and associated hardcopies generated and reported as required. Manual integrations are coded to provide the data reviewer justification for such action. The codes are labeled on the ion chromatogram signal (GC/MS signal) and chromatogram for GC based analysis as follows:

- M1 peak tailing or fronting
- M2 peak co-elution
- M3 rising or falling baseline
- M4 retention time shift
- M5 miscellaneous - under this category, the justification is explained
- M6 software did not integrate peak
- M7 partial peak integration

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum, both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

A handwritten signature in black ink, appearing to be 'J. H. L.', written over a horizontal line.
