Subject: Natural Attenuation Monitoring Plan Approval Order  
Building 81, Tanks 81 A, B, and C  
Naval Air Station Cecil Field  
Jacksonville, Duval County

Dear Mr. Ferro:

The Bureau of Waste Cleanup has reviewed the Site Assessment Report Addendum and the Natural Attenuation Monitoring Plan, dated May 4, 2007 and November 21, 2007, respectively, (received May 8, 2007 and November 26, 2007, respectively), prepared and submitted by Tetra Tech NUS, Inc., for the petroleum product discharge discovered at this site. Pursuant to Paragraph 62-770.690(5)(a), Florida Administrative Code (F.A.C.), the Florida Department of Environmental Protection (Department) approves the Natural Attenuation Monitoring Plan. Pursuant to Rule 62-770.690(8), F.A.C., you are required to complete the monitoring program outlined below. The first sampling event must be performed within 60 days of the installation of replacement monitoring well CEF-502-1SR following the excavation of contaminated soil proposed in the May 25, 2007 Dig and Haul Package for Building 502, Tank 502; or as otherwise approved in a Site Management Plan. Water-level measurements must be made immediately prior to each sampling event. The analytical results (laboratory report), chain of custody record form, cumulative summary tables as required by Subparagraph 62-770.600(8)(a)25., F.A.C. (updated as applicable), site map(s) that illustrate the most recent analytical results, and the water-level elevation information (cumulative summary table and most recent flow interpretation map), must be submitted to the Department within 60 days of sample collection.

The monitoring wells to be sampled, the sampling parameters, and the sampling frequency are as follows:

<u>Monitoring Wells</u>	<u>Contaminants of Concern</u>	<u>Frequency</u>	<u>Duration</u>
CEF-081-04I, 17S, 08SR, 09S, 14S, 15S, 16S, 18I, 19I, 21I, and 22I	Cumene (isopropylbenzene)	Quarterly	One year

"More Protection, Less Process"

Printed on recycled paper.

The approved Remedial Action by Natural Attenuation monitoring period is five years. The sampling frequency will be evaluated following the submittal of the first annual report to determine whether to continue quarterly or whether a different sampling frequency may be appropriate.

If concentrations of contaminants of concern in any of the designated wells increase above the action levels listed below, the well or wells must be resampled no later than 30 days after the initial positive results are known. If the results of the resampling confirm the initial sampling results, then the monitoring report referenced in Paragraph 62-770.690(8)(d), F.A.C., must be signed and sealed by an appropriate registered professional pursuant to Rule 62-770.490, F.A.C., and must include a proposal as described in Paragraph 62-770.690(8)(e), F.A.C.

Contaminated wells:

CEF-081-09S, 19I, 08SR, 04I, 15S, 18I: 8 µg/L cumene (isopropylbenzene).

Perimeter wells (temporary points of compliance):

CEF-081-21I, 16S, 14S, 17S, 22I: .8 µg/L cumene (isopropylbenzene).

If the applicable No Further Action criteria of Rule 62-770.680, F.A.C., are met for two consecutive sampling events, a Site Rehabilitation Completion Report with a No Further Action Proposal, that summarizes the monitoring program and contains documentation to support the opinion that the cleanup objectives have been achieved, must be submitted as required in Subsection 62-770.690(10), F.A.C. If the applicable No Further Action criteria of Rule 62-770.680, F.A.C., are not met following five years of monitoring, then the monitoring report must include a proposal as described in Subsection 62-770.690(8)(f), F.A.C.
