RE: Draft Site Assessment Report Addendum, Building 502, Tank 502, Naval Air Station Cecil Field, Jacksonville, Florida.

Dear Mrs. Nwokike:

I have completed my review of the Draft Site Assessment Report Addendum, Building 502, Tank 502, Naval Air Station Cecil Field, dated May 11, 2007 (received May 14, 2007), prepared and submitted by Tetra Tech NUS, Inc. I have the following comments on the Draft SARA:

- (1) In the conclusions and recommendations, it identifies monitoring well CEF-502-1SR as a perimeter well and CEF-502-6S as a source well. This is backward.
- (2) In the conclusions and recommendations, it says that well CEF-502-4S should be eliminated from the MONA program as discussed and approved at the March 2007 NAS Cecil Field BCT meeting. According to meeting minute number 2375, monitoring should include CEF-502-4S.
- (3) Based upon my review of the previous groundwater monitoring reports submitted for this site, I would recommend discontinuing the analysis for volatile organic compounds. Volatile petroleum products contaminants of concern have not been detected above groundwater cleanup target levels for several years.
- (4) Once source removal has been completed and monitoring well CEF-502-1SR replaced, groundwater monitoring should be resumed with the wells proposed and at a semi-annual frequency. Replacing well CEF-502-4S with well CEF-502-3S is approved.

"More Protection, Less Process"
