RE: Final Draft, BRAC Environmental Site Screening Report, Study Area 23, Naval Training Center, Orlando, Florida

Dear Mr. Hansel:

I have completed the review of the Final Draft, Environmental Site Screening Report, Study Area 23, Orlando Naval Training Center, dated September 1999 (received September 29, 1999), prepared and submitted by Harding Lawson Associates. The report is suitable for its intent. Although aluminum was detected in monitoring well 23G001 at levels exceeding secondary standards and background reference concentrations, the groundwater sample collected from the well was highly turbid and there was no indication that past site activities could have caused this exceedance. The Charleston Naval Detachment's work on the site has apparently removed contaminated soil at the end of the former main pool drain. I concur with the conclusion that no further action is warranted at this site. Please finalize this document for signature by the BRAC Cleanup Team.

If I can be of any further assistance with this matter, please contact me at (850)488-3693.

Sincerely,

David P. Grabka
Remedial Project Manager
