Subject: June 2001 Status Report for Navy Environmental Restoration Program Projects at
Crows Landing

Hello All,

I am transmitting the June 2001 report on the Navy's environmental restoration program projects at NASA Crows Landing Flight Facility.

We received preliminary laboratory data for some of the hydropunch samples that were collected during the period from 4 through 7 June 2001 near former UST Site 117 today. Based upon preliminary data, carbon tetrachloride, 1,2-DCA, benzene, and/or tert-butyl alcohol were identified above laboratory reporting limits in samples from 117-HP-01, 117-HP-02, and/or 117-HP-03. A sketch showing approximate sample locations is included as an attachment to the status report. The hydropunch sample locations near former UST Site 117 are approximately 300 feet or less from the eastern facility property boundary. The Navy may proceed to implement a time-critical removal action for the extraction of groundwater near former UST Site 117 following the evaluation of the hydropunch data.

We recently transmitted several replacement pages for the quarterly groundwater monitoring report for Winter 2001 dated May 2001. These pages include three figures that had typographical errors.

Please do not hesitate to call me at (619) 532-0783 if you have questions about the status report.

Thank you very much.
