RE: Crows Landing Naval Auxiliary Landing Field

We have reviewed the work plan for the closure of tanks CL-1, 2, 3, 7, 8, and 9. The work plan was submitted by PRC Environmental Management, Inc. for the above listed facility. The work plan has been approved with the following conditions:

1. All proposed construction shall be done under the supervision of either a civil engineer, geologist, or an engineering geologist registered in the State of California.
2. The drilling shall be done under the direction of a California State Licensed Contractor C-57.
3. A laboratory sample must be taken at the termination of the borehole and at the top of the saturated zone.
4. The boring for the monitoring wells should extend at least 15 feet into the saturated zone.
5. A three to five foot bentonite annular seal must be emplaced above the filter pack and a five foot cement surface seal is required.
6. The presence of floating product must be determined before purging and sampling.
7. All borings must be properly abandoned by placing a bentonite basal plug and backfilling with grout. A cement surface plug shall be placed at the surface of the boring. Boring identification numbers should be placed at the boring location.

Mr. Edward Muniak, P.E.

8. A closure permit shall be submitted to this department prior to starting of this work.

The above conditions must be included in the working plans.
