5/15/97

TO WHOM IT MAY CONCERN:

I have attached a copy of an oral presentation prepared for the El Toro Air Station Resortation Program.

Jerold Werner

HELLO

My name is Jerold Werner. I am an accountant and have an office in Fullerton. My telephone number is 714 773 0994.

I am not here tonight to talk to you about income taxes or balancing the books. My message is that the proposal to clean up site 24 at the El Toro Marine Base is flawed.

I am here as an agent representing a small remediation company located in Orange. Very small. We have two principal owners and three employees. One of the owners is a woman with a chemistry background and the other is a mechanical engineer. Together these two people invented and developed a very unique and clean vapor extraction system to clean up TCE and PCE in soil. We do nothing else but TCE and PCE soil contaminations.

Our system is new and uses a different approach and is state of the art. It is housed in a very small trailer on site and is very portable. We don't use carbon; we don't use heat; we don't inject the soil with bugs; we don't excavate; we don't use internal combustion engines; we don't charge anything into the atmosphere; and unlike the carbon system, we don't generate and carbon.

What we do is to use two very simple properties of chemistry that are in every chemistry 101 textbook. We convert the TCE in the soil back into its original liquid form. We collect the TCE in 55 gallon drums for hazard material transportation. Actually what happens is that the TCE is generally purchased by a manufacturer to be re-cycled and re-sold.

We currently have three local sites using our units. We always obtain a full EPA permit prior to working on any contaminated site.

Let me describe one of our sites. A Fortune 100 company owns this property in Torrance. I can't tell you which company it but everyone in this room would recognize the name. They have a problem. A TCE problem in the soil of this property. We have been on this site 12 months. We have captured and disposed of 19,000 pounds of TCE so far. In addition to us, at this site is also a carbon vapor extraction system. This carbon system has never performed adequately. To date we have billed the Environmental Engineering company in charge of this site approximately \$200,000 to remove the 19,000 pounds of TCE from the soil. We also have produced weekly reports monitoring the contamination levels found in the soil vapors. Since we bill the engineers for our services and the not property owner, we don't know how much was billed by the engineers to the property owner. Our unit runs 24 hours a day, 7 days a week. Even as I speak, we are recovering TCE.

We have problems with the Feasibility Study. First and foremost is cost. We are upset that our technology was NOT, NOT included as a potential option to clean up this TCE site. This site was made for us. We made several attempts to contact the engineers and their subcontractors involved in the Phase I and II steps but were repeatedly ignored or rebuffed.

There are many problems with any carbon based vapor extraction system. Some were briefly discussed in the Feasibility Study and some were ignored or glossed over.

1. Using carbon as a filtering agent is not new. The Egyptians used it. The present carbon technology originated 60 years ago.
2. The engineers presented the carbon option as state of the art. Nothing 60 years old is state of the art. They may add some bells and whistles but it is not new.
3. This carbon system will clean up the soil but in the process makes contaminated carbon. This

ent. At least one TON of carbon is needed to remove just 200 pounds of TCE from the soil. If their estimates of the TCE in the soil are REALLY wrong, then the cost of the carbon system will increase because of the additional carbon needed. There is no limit to the cost increases.

5. The amount of the TCE absorbed by a 200 pound canister of carbon is subject to a lot of estimates and guess work. It is difficult to measure.

6. In our experience, estimates of the level of contamination in soil made by engineers can be off by as much as 50 to 500 percent. They don't know how much TCE is in the soil. The sampling techniques used for the estimates have serious limitations.

The Feasibility Study states that the proposed carbon system meets eight of the nine EPA criteria. We think that it only meets seven criteria. At an estimated cost of nearly five million dollars, it certainly must fail the cost effective criteria. When compared to our system, we feel that the general public would reject it in favor of our system and it would fail the criteria of acceptance by the general population. We feel that our system meets all nine of the EPA criteria.

Lets go back to the cost of cleaning up the TCE in the soil. We charge \$2500 up front to set up one of units at a site. The Feasibility Study indicated that the first year's capital cost of using the carbon option was over one million dollars. We charge \$500 per day or \$180,000 per year to operate one unit. Using the proposed carbon system was estimated at one million dollars , or \$2700 per day, in the first year. We monitor our own systems daily, it is included in the daily rate. The Feasibility Study indicated that the first year monitoring costs alone were going to be \$900,000.

In addition to the set up fee and the daily rate, our systems require about \$700 monthly for electricity. We use lots of power. There is a \$100 fee to pick up a 55 gallon drum of TCE for transportation. We also take our own samples of soil vapors and charge only \$50. Labs charge in excess of \$100 for this service.

Summarizing, the Feasibility Study indicated a total cost of approximately five million dollars to use the carbon vapor extraction system to clean up the TCE. Even if we installed two of our units, billing for both, we would clean up this site within two years at a cost of less than \$800,000. The final cost is dependent upon how far off the estimates of the level of contamination that is in the soil.

It is our firm belief that the engineering company involved in this Feasibility Study made their decision to recommend a carbon vapor system prior to any evaluation of all options. They knew what their answer would be prior to beginning the study.

We have found in our experience that many environmental engineering firms fear our technology. They don't like state of the art technology. With our system, they don't like the role they play in remediation. They are reduced to performing minimal monitoring functions and writing reports. Engineers don't like the idea we can cut the costs of solving TCE problems 50 to 90 percent of their estimates. We make environmental engineers eat their estimates of clean up cost.

What I want from the Board is a directive to the Engineers to investigate what we can do. Look at our sites. We are ready for any pilot program. We can hook up to the wells at El Toro and start capturing TCE within ten days. We have just built a new unit and are ready. We are ready to compare ourselves to any carbon vapor system. We are ready for a field demonstration for anyone. We feel confident that our system is a vastly superior system to the proposed carbon system.

My number is 773 0994. Please call me soon so that we can stop this mistake.

END EVENING

Meeting Evaluation

MCAS El Toro Public Meeting - May 15, 1997

Please take a few minutes to complete this evaluation and place it in the box at Table 7. Your input will help shape future meetings and improve our communication with you.

1. How did you learn about this meeting? Please check off ✓.

- Newspaper ad - which paper? _____
- Newspaper story - which paper? _____
- TV/radio - which station? _____
- Mailer - where did you receive the mailer? _____
- MCAS El Toro Restoration Advisory Board Meeting?
- Other _____

2. Please rate the items below using the following rating system by circling the corresponding number:

1 - very poor, 2 - poor, 3 - adequate, 4 - good, or 5 - very good.

- a. Were the efforts to announce this meeting satisfactory? 1 (2) 3 4 5
- a. How did the format of this meeting meet your information needs? 1 2 3 (4) 5
- b. Were the displays informative? 1 2 3 (4) 5
- c. Were the handouts helpful? 1 2 3 (4) 5
- d. Were you able to discuss issues of concern with project staff? 1 2 3 (4) 5
- f. Were you satisfied with the various methods for providing public comments? 1 2 3 (4) 5

3. Please make any additional comments or suggestions that will help enhance communication with the community at future public meetings. Use the back of this form if needed.

MORE ATTENTION TO THE METHODS OF COMMUNICATING
THE CURRENT & FUTURE MEETING PLACES AND TIMES. PLUS
WHAT THE RESULTS OF ALL THE INVESTING AND ACCOMPLISHMENTS
ARE TAKING PLACES.

Thank you

3. Please make any additional comments or suggestions that will help enhance communication with the community at future public meetings. Use the back of this form if needed.

Understanding the basic apathy of the community. I realize how hard it is to get the public notices to be heard and get people to come. Perhaps you could use the local newspapers in their news column.

Thank you

- Other _____

2. Please rate the items below using the following rating system by circling the corresponding number:

1 - very poor, 2 - poor, 3 - adequate, 4 - good, or 5 - very good.

a. 1 Were the efforts to announce this meeting satisfactory? (1) 2 3 4 5

a. 2 How did the format of this meeting meet your information needs? (1) 2 3 4 5

b. Were the displays informative? 1 2 (3) 4 5 *very pretty...*

c. Were the handouts helpful? 1 2 3 4 (5)

e. Were you able to discuss issues of concern with project staff? 1 2 3 4 (5)

f. Were you satisfied with the various methods for providing public comments? (1) 2 3 4 5

underutilized - I don't think people understood how important she was. the one court reporter was

3. Please make any additional comments or suggestions that will help enhance communication with the community at future public meetings. Use the back of this form if needed.

Re #A1 - I called all 3 papers - 2 were unaware even with your small ad.

Re: A2 - As the ONLY meeting/presentation it was insufficient. MOST people do not know what questions to ask. A presentation was needed with a microphone and public comment, so people could share the questions & brain storming

Thank you

Jail Rawls
