Dear Mr. Powell:

As we recently discussed, the District concurs with your general approach for the modelling plan for the Removal Actions at the Tank Farm and Pickling and Plate Yard, Naval Station Treasure Island, Hunters Point Annex.

As we indicated in April, Industrial Source Complex (ISCST) is an acceptable dispersion model. Because adequate meteorological data is still not available for this area, we recommend using a screening approach to evaluate the possible exposure to toxic air contaminants during the proposed Removal Actions.

Other than the meteorological data used, the input parameters used for the draft air modelling (February, 1990) are acceptable with the District. If you wish the District to review your modeling plan in greater detail or if significant changes have been made, please submit the input parameters to be used. As always, we recommend that you contact the District's Planning Division when planning any complex modeling.

If you have any technical questions concerning dispersion modeling, please call Brian Bateman, Senior Air Quality Engineer, Planning Division at (415) 771-6000, extension 266. If you have any technical questions concerning air toxics, please call please call me at (415) 771-6000, extension 212.

Very truly yours,

A handwritten signature in cursive script that reads "Scott Lutz".
