Subj: DREDGING PIER 6, NAVSTA LONG BEACH PROJECT M1-85

Ref: (a) MEETING with South Coast Air Quality Management District (SCAQMD), Mr. Alex Bailey, P.E., Supervisory Air Quality Engineer and Mr. Joe Trauma/WESTNAVFACENGCOM, Mr. S. DIRTADIAN and Mr. W. Dougherty of 3 Nov 86

1. The referenced meeting was to expedite the air permitting processes for dredging operations NAVSTA Long Beach under project M1-85.
2. Mr. Bailey stated that "blanket applications" may not be accepted since permits are issued for specific pieces of equipment operating at a specific site. NAVSTA Long Beach is considered a separate entity from the Port of Los Angeles and permits are distinct for each site.
3. Dredgers are considered stationary sources and permits are valid for up to 12 months with extension, provided equipment and site are not changed.
4. Permit applications take eight (8) weeks minimum for processing. If emissions exceed limits specified in SCAQMD Rule 1303, then an air quality modeling analysis must be performed and offsets will be required. This exercise may take up to ten (10) months.
5. An equipment emission source test performed by a certified lab will be required to verify the emission concentrations.
6. The visible emission rule 401 must be observed.
7. The undersigned explained the importance of timeliness in permitting to SCAQMD because of dredging operation restrictions after April 1, 1987. In to expedite the permitting process, SCAQMD agreed to accept an "incomplete" application from the Navy now with the payment of \$250 fee. Equipment characteristics data as required on the application will be furnished by the successful bidder after contract award.
8. This office will start the application process upon receipt of the application fee check payable to SCAQMD from San Bruno. In addition, this office will coordinate for including a section in the bid documents for compliance with applicable SCAQMD rules. Application forms were picked up at SCAQMD publication center.
