## MEMORANDUM

**TO:** Alan Lee, SWDIV  
**FROM:** Krish Kapur, Bechtel  
**DATE:** September 15, 1993  
**RE:** Number of Sampling Points for Site 6A RSE Activities

A meeting was held in the Navy's SWDIV office in San Diego on September 7, 1993. This meeting was attended by John Kluesner, Bong Kown, Krish Kapur and Aklile Gessesse of Bechtel, and Chris Leadon, Alan Lee, Richard Barkside, and Janet Corbett of the Navy. The Navy technical review group expressed a concern regarding the rationale behind the selection of 39 sampling points at Site 6A. The technical group felt that 37 sample points would provide adequate coverage of the site. It was at this meeting that the resolution was made to reduce the sampling points from the original 39 to 37.

A technical review meeting, attended by Bechtel, DTSC, Navy, POLA, and RWQCB was held on September 8, 1993, at the Port of Los Angeles office in San Pedro. During this meeting, Bechtel presented the change in the sampling points that had been made from the Draft RSE Plan. Craig O'Rourke of DTSC raised the issue that the 37 sample points would not render sufficient coverage of the POLA construction area. However, DTSC conceded to a review of the revised Draft RSE Plan prior to making a decision on the approval of the 37 sample points.

On September 13, 1993, Craig O'Rourke contacted Aklile Gessesse, stating that DTSC would not accept the RSE Plan as final unless all the original 39 surface, 31 shallow and 10 subsurface sample points were included.

Following Craig O'Rourke's phone call, Krish Kapur and Aklile Gessesse set up a

telephone conference with Alan Lee, Jim Ferris, and Chris Leadon at SWDIV. It was decided that the RSE field investigation would include the original 39 surface, 31 shallow and 10 subsurface sample points.
