Mr. Alvaro Gutierrez
Department of Toxic Substances Control
245 West Broadway, Suite 425
Long Beach, CA 90802-4444

Dear Mr. Gutierrez:

As you are aware, the Port of Los Angeles (POLA) will begin a construction project (car dumper pit) which will require dewatering approximately 2 million gallons per day of groundwater. Both the Navy and the Agencies agreed that there is a concern that this dewatering project will draw groundwater from the Naval Station Long Beach Sites 6A and 6B toward the construction site. Environmental investigations at Sites 6A and 6B reveal that further work would be required in order to make the sites suitable for transfer. Due to the high probability that the actions by POLA will alter site conditions at Sites 6A and 6B, the Navy has determined that proceeding with additional actions at this time would not be appropriate. Upon completion of the POLA project we will initiate the appropriate investigative/response actions.

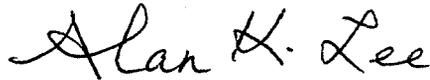

Based on discussion with POLA regarding the schedule of events for completion of their project, we are providing an estimated sequence of events that will occur prior to any additional action by the Navy. Please be aware that the schedule below is solely dependent upon timely completion of the POLA project and the return of groundwater to steady state conditions.

POLA Dewatering Commencement	October 15, 1995
POLA Dewatering Termination	April 15, 1996
Groundwater Returns to Steady State Conditions	July 15, 1996
POLA Completes Plume Recharacterization	October 15, 1996
