California Regional Water Quality Control Board
Attn: Mr. Roger James
San Francisco Bay Region
1111 Jackson Street, Room# 6040
Oakland, CA. 94607

Gentlemen:

The purpose of this letter is to inform your Board of the current progress of our Hazardous Waste Confirmation Study at Naval Air Station (NAS), Moffett Field.

The Navy, through its contractor (Earth Sciences Associates), has completed all required soil sampling and the first monthly series of groundwater sampling to determine the possible presence of soil and groundwater pollution in the "A", "B", and "C" aquifer systems at NAS Moffett Field. This work was done to satisfy the California Regional Water Quality Control Board Waste Discharge Requirements of 7 June 1985 (ORDER NO. 85-66). Enclosures (1), (2), and (3) are technical reports containing the results of the work accomplished to date.

Board Order NO. 85-66 also requires the identification of private wells, to the extent feasible, within NAS Moffett Field with potential to act as conduits for inter-aquifer cross-contamination. To satisfy this requirement we have identified one active well and two inactive wells that may have a potential to act as conduits. Additional information will be collected to confirm or refute this potential. The well locations are shown in enclosure (4).

The second monthly series of groundwater sampling in aquifers "A", "B", and "C" has been completed; the analytical results are expected by 24 November 1985. The third series of such sampling is scheduled to begin on 4 November 1985.
