Subject: DRAFT FINAL ADDITIONAL SITES INVESTIGATION REPORT

Dear Stephen:

Please find enclosed three copies of the Draft Final Additional Sites Investigation Report. This document is in partial fulfillment of Contract No. N62474-88-D-5086, Contract Task Order 0170. Attached are the regulatory comments and responses.

SAIC and the EPA suggested in their comments on Section 4.0 further analysis of contaminants of concern are required to serve as a base for risk assessment. CERCLA guidance indicates that an analysis of contaminants of concern and discussion of risk assessment are essential components of a Remedial Investigation. This report is a preliminary site investigation (SI). The purpose for the discussion of contaminants of concern in the SI of these three additional sites was to determine the need for further investigation (i.e., installation of groundwater monitoring wells). Therefore, JMM believes that further analysis of contaminants of concern and risk assessment is premature at this point because of the limited amount of data and the scope of the SI.

Section 4, "Contaminants of Concern", has been removed from the Draft Final Additional Sites Investigation Report. The analysis pertinent to justifying our conclusions and recommendations has been moved from Section 4 to Section 3 and is now discussed along with the investigation results.
