Subject: Action Memorandum: Time-Critical Removal Actions for Installation Restoration Site 12, Former Naval Station Treasure Island, San Francisco, California

Site Status: Non-National Priorities List
Removal Category: Time Critical Removal Action
CERCLIS ID: CA7170023330
Site ID: Installation Restoration Site 12

1.0 PURPOSE

This action memorandum documents for the administrative record the Department of the Navy's decision to undertake a time-critical removal action (TCRA) for soil within Installation Restoration (IR) Site 12 at the former Naval Station (NAVSTA) Treasure Island (TI) in San Francisco, California (Figure 1). IR Site 12 is known as the Old Bunker Area and is often referred to as the TI housing area. Figure 2 shows IR Site 12 within NAVSTA TI. The Department of Defense (DoD) has the authority to undertake Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) response actions, including removal actions, under Title 42 United States Code (U.S.C.) Section (§) 9604, 10 U.S.C. § 2705, and Executive Order 12580. Furthermore, this removal action is, to the maximum extent possible, consistent with Division 20, Chapter 6.8, Article 5 of the California Health and Safety Code.

The purpose of this TCRA is to remove contaminated soil from the following three areas within IR Site 12:

- Gateview Arsenic/Total Petroleum Hydrocarbon (TPH) Area (Figure 3)
- Discrete locations within the southern portion of IR Site 12 (Figure 4)
- Halyburton Court Area (Figure 5)

The Gateview Arsenic/TPH Area is contaminated by TPH (free product and dissolved phases) in soil and groundwater and dissolved arsenic in groundwater. In general, response actions under CERCLA do not address petroleum because CERCLA § 101(14) excludes petroleum from the definition of a CERCLA hazardous substance. However, CERCLA response actions may address petroleum contamination if the petroleum contamination is collocated with a release of

CERCLA hazardous substances. The TPH in soil and groundwater at the Gateview Arsenic/TPH Area is located with, and is believed to contribute to, the elevated concentrations of dissolved arsenic in groundwater. This TCRA will address potential risks to future construction workers to dissolved arsenic in groundwater, as well as potential risks to aquatic organisms at the shoreline from exposure to dissolved arsenic. The Navy anticipates the proposed soil removal action at the Gateview Arsenic/TPH Area will improve the subsurface conditions by removing saturated and unsaturated soil impacted by TPH, thus reducing concentrations of dissolved arsenic in groundwater.

Soils within the discrete locations (collectively referred to as Area 1 for removal action planning purposes) and the Halyburton Court area (referred to as Area 2 for removal action planning purposes) are contaminated by one or more of the following chemicals of concern (COC): polychlorinated biphenyls (PCB), polycyclic aromatic hydrocarbons (PAH), dioxins and furans, and lead. For PCBs and PAHs, the RI report evaluated each detected chemical within these analytical groups individually in the human health risk assessment. However, for presentation and discussion of the results for PCBs and PAHs in the RI report, the results for PCBs are also presented as total Aroclors and the results for seven carcinogenic PAHs (that is, benzo[a]anthracene, benzo[b]fluoranthene, benzo[k]fluoranthene, benzo[a]pyrene, chrysene, dibenz[a,h]anthracene, and indeno[1,2,3-cd]pyrene) are presented as benzo(a)pyrene equivalents [BAP EQ]. This TCRA will address potential risks to current and future residents from exposure to PCBs, PAHs, dioxins and furans, and lead in soil. The Navy anticipates this proposed removal action will permanently eliminate soil contamination of the above constituents at these two areas.

This removal action is being conducted as a TCRA because concentrations of lead, PAHs, PCBs, and dioxins and furans are at levels that pose a potential risk to residential receptors present at IR Site 12. In addition, the free product at the Gateview Arsenic/TPH Area is a continuing source of contamination to groundwater and potentially to San Francisco Bay. The excavations that will be completed as part of this TCRA are necessary because they will address specific contaminants in areas not part of current Navy removal actions. The excavations completed as part of this TCRA will contribute to the overall remedial strategy for IR Site 12 by removing contaminants identified as posing potential risk from the site to levels that are protective of residential receptors.

This removal action is consistent with the factors set forth within the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) at Title 40 of the Code of Federal Regulations (CFR) Part 300, and Division 20, Chapter 6.8, Article 5 of the California Health and Safety Code, based on the findings of potential exposure to COCs at the site by current and future residents and future construction workers. These findings are discussed in more detail in [Section 3.0](#).

No nationally significant or precedent-setting issues are associated with this site.

2.0 SITE CONDITIONS AND BACKGROUND

This section presents the description, location, and background for IR Site 12 and the physical characteristics and past releases from the site, as well as the site regulatory status and current and previous actions at IR Site 12.

2.1 SITE DESCRIPTION

IR Site 12 is a 93-acre residential area consisting of 900 housing units. IR Site 12 is also known as the “Old Bunker Area” because, from the 1940s to the 1960s, 21 ammunition bunkers were located in the northern half of IR Site 12 (PRC Environmental Management, Inc. 1995). Disposal units and general solid waste disposal areas (SWDA) surrounding the bunkers were identified in IR Site 12. Other historical land uses at the site include waste incineration, decontamination training (short-life radionuclides) at the USS *Pandemonium*, solid waste storage, oil storage, vehicle parking during the 1939 Golden Gate International Exposition, and an aircraft landing strip. The Navy ultimately constructed the current residential buildings at IR Site 12 in four phases from 1967 to 1989 (CH2M Hill Kleinfelder [KCH] 2014).

2.1.1 Removal Site Evaluation

IR Site 12 was identified during a preliminary assessment in 1988 (Dames and Moore 1988). From the 1940s to 1960s, both trench-type disposal units and general SWDAs were constructed within IR Site 12. There are four SWDAs within IR Site 12: SWDA Westside (formerly referred to as SWDA A&B), SWDA Bayside (formerly referred to as SWDA 1207/1209), SWDA North Point (formerly referred to as SWDA 1231/1233), and SWDA Bigelow Court. The SWDAs were used for disposal of materials such as loose rubbish, bottles, wire rope, paper, and steel drums, as identified in excavation trench logs created during the planning effort for construction of the housing area (McCreary-Kordsky Engineers 1965). Disposal of household waste, construction debris, and sandblast waste also is suspected to have occurred in these SWDAs (SulTech 2006). In addition, low-level radiological objects have been identified in these SWDAs from past ship repair and dismantling at NAVSTA TI. Although radionuclides are not being specifically targeted in this removal action, excavated soil will be screened for potential radionuclides. The SWDAs are being addressed by a separate non-time-critical removal action (NTCRA) to excavate and dispose of debris and contaminated soil (Naval Facilities Engineering Command [NAVFAC] 2007). Based on additional investigation, grading and site preparation for construction of the housing units included mixing and spreading the solid waste with fill material and surface soil both within and outside the SWDAs (SulTech 2006).

The Gateway Arsenic/TPH Area (Figure 3) is included in this removal action because of elevated concentrations of TPH in soil and groundwater and dissolved arsenic in groundwater. The areas identified for removal are based on historical data, including recent data gaps sampling conducted in 2013 and 2014 to support the feasibility study (FS) and FS addendum (KCH 2014, 2015). The Gateview Arsenic/TPH Area is located along the southwestern shoreline of IR Site 12. A 1971 report indicated that an oil tank was buried underground on IR Site 12 in the vicinity of Buildings 1311 and 1313 (Lowry and Associates 1971). The report indicated that the underground storage

tank (UST) was to be removed during grading for housing construction; however, there is no documentation on the characteristics, removal, or closure of the UST. An automobile service station was also located directly east of the current Building 1311 during the 1938 to 1939 Golden Gate International Exposition. Fuel tanks associated with the service station were removed around 1944. The abandoned oil tank described above and the former service station may be the sources of TPH contamination for the Gateview Arsenic/TPH Area; however, diesel is the predominant fuel detected in soil, and the service station apparently stored and dispensed gasoline, meaning that it is possible that TPH impacts have originated from more than one source. Elevated levels of arsenic in groundwater within this area are reported to result from reducing conditions in groundwater that occur from biodegradation of dissolved petroleum hydrocarbons (TriEco-Tt 2012).

Additional soil removal is planned for the discrete locations within the southern portion of IR Site 12 (Figure 4). Soil removal at these discrete locations is included in this action memorandum based on data gaps sampling conducted after the remedial investigation (RI) report to support the FS and FS addendum (KCH 2014, 2015). Elevated concentrations of PCBs, PAHs, dioxins and furans, and lead will be addressed by this removal action, and the removal is expected to serve as a final remedy. As a result, when the project enters the record of decision (ROD) process, it is anticipated that no further action will be required for the discrete locations.

The Halyburton Court area is included in this removal action because of elevated concentrations of PCBs and a small quantity of PAHs in soil (Figure 5). The areas identified for removal are based on historical data, including recent data gaps sampling conducted in 2013 and 2014 to support the FS and FS addendum (KCH 2014, 2015). The Halyburton Court area was built on the site of a former storage yard; which differs from the SWDAs because waste was not intentionally disposed of in this area. Remedial investigation samples were collected in the Halyburton Court area in 1999; PCBs and PAHs were detected in shallow soils. Subsequent investigations were performed in 1999 and 2000 to delineate the vertical and horizontal extent of impacts to soil and groundwater in the Halyburton Court area (Tetra Tech EM Inc. [Tetra Tech] 1999). After the subsurface characterization, a total of 16,063 tons of soil were excavated from an approximate 2-acre area in July and August 2000 (Navy 2005; see also Section 2.2), removing soil contaminated with PCBs and PAHs. Soils in this area contained concentrations of PCBs in excess of the 1.0 milligram per kilogram (mg/kg) site-specific action level and PAHs in excess of the 0.62 mg/kg BAP EQ site-specific action level, as described in the RI (TriEco-Tt 2012). Confirmation sampling indicated that contaminated soils still existed below the 4-foot excavation depth and beneath structures. As a result, in November 2001, the Navy collected soil and grab groundwater samples in Halyburton Court to delineate the vertical extent of PCBs in soil remaining in place at depth with the highest known concentrations of PCBs (Tetra Tech 2001a). Additional data gap sampling was conducted at the Halyburton Court Area in 2013 and 2014 to support the FS and FS addendum and further define the lateral and vertical extent of COCs, including their extent underneath buildings (KCH 2014, 2015). The areas for cleanup shown in Figure 5 were identified in the FS and FS addendum. Elevated concentrations of PCBs and carcinogenic PAHs (as compared with BAP EQ criteria) will be addressed by this removal action and the removal is expected to serve as a final remedy. As a result, when the project enters the ROD process, it is anticipated that no further action will be required for the Halyburton Court area.

2.1.2 Physical Location

NAVSTA TI is located in the San Francisco Bay, between San Francisco and Oakland, California (Figure 1). NAVSTA TI consists of two contiguous islands: TI, which is 403 acres, and Yerba Buena Island (YBI), which is 147 acres. TI is manmade and was constructed of materials dredged from the Bay in 1936, while YBI is a natural island. IR Site 12 occupies about 93 acres of the northwestern portion of Treasure Island, adjacent to the Bay (Figure 2). Commercial/industrial facilities and residences are located on TI and YBI.

NAVSTA TI is surrounded by the San Francisco Bay Area, a major metropolitan area with a population exceeding 7 million people (Association of Bay Area Governments and Metropolitan Transportation Commission 2013). Vehicular traffic to and from NAVSTA TI uses the San Francisco-Oakland Bay Bridge (Interstate 80), which passes through YBI. Oakland is located 8.5 miles east of TI on Interstate 80, and San Francisco is located 5 miles west of TI on Interstate 80.

The climate is semiarid, with rainy winters and dry summers. Relative humidity ranges from 50 to 90 percent; it is lowest during fall days and highest during winter nights. Fog is frequent, particularly during the night or morning. The average annual precipitation is 21 inches and occurs mostly from November to April (Navy 1987).

2.1.3 Site Characteristics

IR Site 12 is predominantly a residential housing area, consisting of residential buildings with fenced back yards, open grassy areas between the buildings, common areas, paved roads, and parking areas. The current land uses of surrounding areas include a public school, a daycare center, and various commercial/industrial uses. According to the Final Environmental Impact Report (City and County of San Francisco Planning Department 2011), IR Site 12 is designated for residential and open space uses. Presently, the habitat on TI is poor (TriEco-Tt 2012). No other sensitive land uses (wetlands or other) occur within the areas of IR Site 12 subject to this TCRA.

2.1.4 Release or Threatened Release into the Environment of a Hazardous Substance or Pollutant or Contaminant

Through its investigations, the Navy has documented the release or threatened release of CERCLA hazardous substances, pollutants, and contaminants at IR Site 12.

Dissolved arsenic in groundwater at the Gateview Arsenic/TPH Area was identified as a COC based on potential construction worker risk and the potential for migration of this chemical to the ecological point of exposure in the San Francisco Bay, where it could be bioavailable to aquatic receptors. TPH (free product and dissolved phases) was also identified in groundwater because it is commingled with the arsenic and is believed to have mobilized the arsenic.

Although TPH is not a CERCLA COC, TPH (including free product) in subsurface soil is being addressed at the Gateview Arsenic/TPH Area because it is commingled with dissolved arsenic at elevated concentrations and, until removed, could continue to mobilize arsenic in groundwater. As such, removal of the TPH source area is a first step to improving subsurface conditions by aiding in the reduction of elevated concentrations of dissolved arsenic. If the TPH source area is not addressed, the TPH and concentrations of dissolved arsenic will likely persist and potentially migrate to the nearby bay environment.

PCBs, PAHs, dioxins and furans, or lead were identified as COCs in soil that present potential risk to residential receptors at the discrete locations because they are present at elevated concentrations.

At the Halyburton Court area, there appears to be PCB-contaminated soil remaining at a depth of 4 to 5 feet below ground surface (bgs) in the former parking lot adjacent to Building 1100 and under the foundations of several buildings that present a potential risk to residential receptors. Groundwater samples collected from a groundwater monitoring well in this area did not yield any detections of PCBs.

The potential contaminant release and transport mechanisms at IR Site 12 are (KCH 2014):

- Spilling or disposal.
- Re-grading. (Prior to construction of the housing at IR Site 12, the areas now referred to as SWDAs were graded during earthwork operations, which spread the localized contaminant-containing soil over the ground surface in areas away from the SWDAs.)
- Leaking tanks.
- Leaching from disposal areas.
- Contaminant transport via rain or surface water infiltration and percolation through soil and to groundwater.
- Volatilization.
- Wind suspension.
- Overland surface water flow with eventual discharge of water and sediments to the Bay.
- Contaminated groundwater migrating to surface water.

2.1.5 National Priorities List Status

NAVSTA TI is not on or proposed to the National Priorities List. Pursuant to the delegation of certain presidential authorities under Executive Order 12580, Superfund Implementation, and

Executive Order 13016, Superfund Amendments, the Navy is the lead agency under CERCLA for NAVSTA TI and is responsible for addressing the release of CERCLA hazardous substances, pollutants, or contaminants. This removal action is consistent, to the maximum extent possible, with California Health and Safety Code, Division 20, Chapter 6.8, Article 5.

2.2 OTHER ACTIONS TO DATE

This section provides information about previous removal actions completed, and any current actions under way at IR Site 12. No recent actions have been conducted within the areas subject to this removal action; however, work at adjacent areas such as Bigelow Court and SWDA Westside areas may have or will potentially address some areas that are planned for removal in this removal action.

As noted above in [Section 2.1.1](#), prior investigations were performed in the Halyburton Court area to delineate the nature and extent of PCBs and PAHs. After the subsurface characterization, a total of 16,063 tons of soil were excavated from an approximately 2-acre area in July and August 2000 during a TCRA (Navy 2005). Most of the removal was in Halyburton Court; additional removals were on the eastern side of Bigelow Court, and a small removal was between Buildings 1411 and 1413 in Flounder Court. Soils with PCBs at concentrations exceeding 1 mg/kg were removed until concentrations were below 1 mg/kg or to a maximum depth of 4 feet bgs. Confirmation sampling indicated that contaminated soils still existed below the 4-foot excavation depth and beneath the adjacent housing structures. Additional soil excavation is necessary at the Halyburton Court area to remove PCBs and PAHs at the site.

A TCRA was also conducted in the vicinity of Buildings 1207 and 1209 (SWDA Bayside) in summer 1999 for lead where there appeared to be a hot spot in a former burn pit area. About 2,200 cubic yards of soil was excavated and replaced with clean fill (IT Corporation [IT] 1999).

Trenching during the summer of 1999 identified three additional areas of debris in areas now known as SWDAs Westside and North Point. An additional removal action was a TCRA for lead-contaminated soil in the vicinity of Building 1133 (within SWDA Westside) in November 1999 (IT 2000) because residents lived in the area. About 3,100 cubic yards of soil was excavated and replaced with clean fill.

Another removal action was conducted in the areas of Buildings 1252, 1254, 1246, 1248, and 1413 in fall 2001 (IT 2002a). These areas were identified during an investigation program conducted for the Navy (IT 2002b). PCBs in soil were identified as COCs near Building 1254, and elevated concentrations of PAHs were found in soil near the remaining buildings. During excavation near Building 1254, the contaminated soil was observed to be discontinuous and appeared to have been redistributed by previous grading operations. The removal action was expanded until cleanup goals were met and verified by confirmation sampling.

An NTCRA action memorandum (NAVFAC 2007) was developed to address chemical contamination in SWDAs Westside, Bayside, North Point, and Bigelow Court. Starting in 2007,

an NTCRA has been under way at SWDAs Westside, Bayside, and North Point. The NTCRA for all SWDAs included excavation and screening of soils for chemical and radiological (radium-226) contaminants, generally to a depth of 4 feet bgs. The excavation areas include residential housing common areas, back yards, and roadways. Low-level radiological objects containing radium-226 were found in soil within the SWDAs during the NTCRA at the SWDAs Westside, Bayside, and North Point. To date, over 600 radiologically elevated objects have been collected from these SWDAs; the objects have either been disposed of off site as low-level radiological waste or are awaiting disposal in a radiologically posted area in secured lockers.

The NTCRA at SWDA Bigelow Court began in May 2014. The removal action removed approximately 1,800 cubic yards of soil and debris to remediate chemical contamination (PCBs, lead, and PAHs) and characterize and remediate any radiological contamination (radium-226) identified during the removal action. Three low-level radiological objects were found at the site and removed. Two buildings (1101 and 1103) were also demolished to complete the NTCRA and remove all site contamination. The SWDA underwent a Multiple Agency Radiation Survey and Site Investigation Manual final status survey with the goal of radiologically releasing this area. Documentation regarding the findings of the SWDA Bigelow Court NTCRA is being prepared.

At present, the CERCLA process for the SWDAs, as well as addressing radium-226 as a radioisotope of concern across IR Site 12, is proceeding separately from the removal action proposed in this action memorandum. A final remedy for the SWDAs and a remedy for other areas of IR Site 12 (focusing on radium-226) will be evaluated in a separate FS.

2.3 STATE AND LOCAL AUTHORITIES' ROLES

This section discusses the roles of regulatory agencies with potential involvement in the TCRA for IR Site 12. The Navy is the lead federal agency for all CERCLA response efforts on NAVSTA TI. A Federal Facility Site Remediation Agreement (FFSRA) was signed by the Navy, the Department of Toxic Substances Control (DTSC), and the Regional Water Quality Control Board (Water Board) on September 29, 1992 (Navy 1992). The FFSRA establishes a framework for consultation, coordination, and dispute resolution concerning environmental response actions between the Navy and the State of California regulatory agencies involved in the IR Program at NAVSTA TI. The State of California provides technical review and comment on the Navy's development, selection, and implementation of this removal action.

A Base Realignment and Closure (BRAC) Cleanup Team (BCT) has been established at NAVSTA TI and is led by the BRAC Environmental Coordinator (BEC). Project team meetings are conducted to perform periodic program reviews and reach consensus on decisions with federal and state regulatory agencies. The BCT includes the BEC and representatives from DTSC, the Water Board, and the U.S. Environmental Protection Agency (EPA). Other key participants on the project team include representatives from the City of San Francisco and technical consultants.

3.0 THREATS TO PUBLIC HEALTH OR WELFARE OR THE ENVIRONMENT AND STATUTORY AND REGULATORY AUTHORITIES

In accordance with the NCP, the following threats must be considered in evaluating the appropriateness of a removal action (40 CFR § 300.415 [b][2]):

1. Actual or potential exposure to nearby human populations, animals, or the food chain from hazardous substances or pollutants or contaminants.
2. Actual or potential contamination of drinking water supplies or sensitive ecosystems.
3. Hazardous substances or pollutants or contaminants in drums, barrels, tanks, or other bulk storage containers, that may pose a threat of release.
4. High levels of hazardous substances or pollutants or contaminants in soils largely at or near the surface that may migrate.
5. Weather conditions that may cause hazardous substances or pollutants or contaminants to migrate or be released.
6. Threat of fire or explosion.
7. The availability of other appropriate federal or state response mechanisms to respond to the release.
8. Other situations or factors that may pose threats to public health or welfare of the United States or the environment.

3.1 THREATS TO PUBLIC HEALTH OR WELFARE

The following threat out of the eight threats listed above applies to conditions at the three areas targeted for this removal action at IR Site 12:

1. Actual or potential exposure to nearby human populations, animals, or the food chain from hazardous substances or pollutants or contaminants.

A human health risk assessment was prepared to assess human health effects associated with exposure to contaminated soil and groundwater at IR Site 12 (TriEco-Tt 2012). Additional data gaps sampling conducted in 2013 and 2014 further delineated areas of concern. Based on the additional data, the identified COCs include arsenic in groundwater (with TPH in soil as a commingled contaminant), and PCBs, PAHs, dioxins and furans, lead, and TPH in soil.

PAHs and PCBs are strongly sorbed to soil and are essentially insoluble in water. Therefore, they are mobilized only through wind erosion or surface water transport of the affected soil. Sorption is the primary process governing the fate of PAHs and PCBs released to soil, so that only very low levels of PAHs are released through volatilization from soils to ambient (outdoor) air.

IR Site 12 contains occupied residential units. Therefore, a potential threat exists, and a response may be taken to reduce potential threats to public health in the future. The recommended removal actions in this action memorandum will address these potential threats to current and future residents from exposure to contaminants in soil and to future construction workers from contaminants in groundwater.

3.2 THREATS TO THE ENVIRONMENT

The following threat out of the eight threats listed above applies to conditions at the Gateview Arsenic/TPH Area. No potential threats to the environment are identified for the discrete locations or the Halyburton Court areas that are subject to this removal action.

1. Actual or potential exposure to nearby human populations, animals, or the food chain from hazardous substances or pollutants or contaminants.

Groundwater is a threat because it contains dissolved arsenic at concentrations resulting in an unacceptable risk to ecological health. A terrestrial screening-level ecological risk assessment and aquatic habitat assessment were prepared to assess ecological effects associated with exposure to contaminated soil and groundwater at IR Site 12, and dissolved arsenic in groundwater was identified as an ecological risk (SulTech 2007; Tetra Tech 2001b). Arsenic was identified as a COC based on the potential for migration of this chemical to the ecological point of exposure in the San Francisco Bay, where it could be bioavailable to aquatic receptors. The presence of TPH, while not a COC, can cause reducing conditions that will further contribute to dissolved arsenic. The recommended removal action in this action memorandum will address these potential threats to the environment by completing TPH source area removal to improve the subsurface conditions as the first step toward addressing elevated concentrations of arsenic in groundwater.

4.0 ENDANGERMENT DETERMINATION

Actual or threatened releases of CERCLA hazardous substances, including arsenic and TPH (collocated and associated with arsenic mobilization), PCBs, PAHs, dioxins and furans, and lead from IR Site 12, may present a substantial endangerment to public health, welfare, or the environment at IR Site 12.

5.0 SELECTED ACTION AND ESTIMATED COSTS

The FS and FS addendum developed, compared, and evaluated three soil and five groundwater remediation alternatives, including the no-action alternatives for each medium, and estimated costs for the alternatives (KCH 2014, 2015). The selected action and costs are based on the analysis in the FS addendum, with any differences noted, as described below.

5.1 SELECTED ACTION

This section describes the selected removal actions for the Gateview Arsenic/TPH Area, discrete locations, and the Halyburton Court area. Applicable or relevant and appropriate requirements (ARAR), an estimate of cost for implementing the removal action, and a proposed project schedule are also discussed in the following sections.

5.1.1 Selected Action Description

The removal action objectives (RAO) for this removal action are:

- Reduce risk to current and future residents by minimizing the dermal contact, incidental ingestion, and inhalation with soil containing known concentrations of lead above the removal action goal
- Reduce risk to current and future residents by minimizing the dermal contact, incidental ingestion, and inhalation with soil containing known concentrations of PAHs based on BAP EQ that exceed the removal action goal
- Reduce risk to current and future residents by minimizing the dermal contact, incidental ingestion, and inhalation with soil containing known concentrations of PCBs (as total Aroclors) that exceed the removal action goal
- Reduce risk to current and future residents by minimizing the dermal contact, incidental ingestion, and inhalation with soil containing known concentrations of dioxins and furans (as 2,3,7,8- tetrachloro-p-dibenzo-dioxin [TCDD] toxicity equivalent [TEQ]) above the removal action goal
- Reduce risk to the marine ecology and to future construction workers through contact with groundwater containing arsenic above the removal action goal by completing TPH source area removal in soil

The removal action goals developed to support the above-listed RAOs are shown in the following table.

REMOVAL ACTION GOALS FOR SOIL

Former Naval Station Treasure Island, San Francisco, California

Chemical	Removal Action Goal	Basis or Notes
Lead	400 mg/kg	Residential action level, based on maintaining consistency with the soil removal action goals in the ongoing NTCRAs.
PAHs	0.62 mg/kg	Residential action level for BAP EQ.
PCBs	1.0 mg/kg	Toxic Substances Control Act self-implementing cleanup goal of 1 mg/kg Total PCBs for high occupancy use.
Dioxins and Furans	12 ng/kg	NAVSTA TI ambient concentration for 2,3,7,8-TCDD TEQ.
TPH	Remove visible petroleum or odorous soil	"Final Preliminary Remediation Criteria for Petroleum and Petroleum Constituents," Tetra Tech 2001c.
	TPH-dr: 1,380 mg/kg TPH-gr: 1,030 mg/kg TPH-mr: 1,900 mg/kg	"Final Preliminary Remediation Criteria for Petroleum and Petroleum Constituents," Tetra Tech 2001c.

Notes:

BAP EQ	Benzo(a)pyrene equivalent	TCDD	Tetrachlorodibenzo-p-dioxin
mg/kg	Milligram per kilogram	TEQ	Toxicity equivalent
NAVSTA TI	Naval Station Treasure Island	TPH	Total petroleum hydrocarbons
ng/kg	Nanogram per kilogram	TPH-dr	Total petroleum hydrocarbons diesel range
NTCRA	Non-time-critical removal action	TPH-gr	Total petroleum hydrocarbons gasoline range
PAH	Polycyclic aromatic hydrocarbon	TPH-mr	Total petroleum hydrocarbons motor oil range
PCB	Polychlorinated biphenyl		

The selected removal action for the Gateview Arsenic/TPH Area includes excavation of TPH in soil. The removal action will include excavation and removal of TPH (including free product) and TPH-contaminated soil from the area near Buildings 1311 and 1313 and potential biostimulation using an oxygen release compound, if appropriate. Buildings 1311 and 1313 will be demolished because of their proximity to the free product and because the demolition is integral to address the remediation of free product. Building 1325 may be demolished during the removal action if it is determined that its demolition is necessary to address remediation of media contaminated with the COCs identified in this action memorandum.

The selected removal action protects human health and the environment by removing contaminated soil and promoting oxidizing conditions to decrease arsenic mobilization. This removal action will comply with all ARARs identified, will reduce the on-site volume of contaminated soil and reduce arsenic mobilized in groundwater, is technically feasible, and is implementable. Contractors are readily available and have the equipment and expertise necessary for these actions, and the capacity of off-site disposal facilities is adequate to handle the volume of excavated soil.

The selected removal action for the discrete locations includes excavation of contaminated soil. The proposed removal action will address soil contamination by excavating and removing soil contaminated with PCBs, PAHs, dioxins and furans, or lead. The selected removal action protects human health and the environment by removing contaminated soil and preventing mobilization through wind erosion or surface water transport. This removal action will comply with all ARARs identified and will reduce the on-site volume of contaminated soil.

The selected removal action for the Halyburton Court includes excavation of contaminated soil. The proposed removal action will address contamination in soil by excavating and removing PCB- and PAH-contaminated soil. Buildings 1100, 1102, 1104, and 1106 are expected to be demolished during the removal action to allow access to the building footprint and facilitate removal of PCB and PAH contaminated soils from the site. The selected removal action protects human health and the environment by removing contaminated soil and preventing mobilization through wind erosion or surface water transport. This removal action will comply with all ARARs identified and will reduce the on-site volume of contaminated soil.

The selected removal action for each area will require approximately 1 year to prepare a removal action work plan (RAWP) and sampling and analysis plan (SAP), mobilize necessary equipment, prepare the site for excavation, remove free product (Gateview Arsenic/TPH Area only), excavate contaminated soil, backfill (including potential biostimulation of soil for the Gateview Arsenic/TPH Area only), transport and dispose of excavated soil off site, restore the site, and demobilize equipment from the site. The removal action provides a timely response intended to be consistent with the final remedy for IR Site 12 by reducing the likelihood of human and ecological exposure to chemical-contaminated soil and groundwater. The selected action consists of the following tasks:

1. Mobilization
2. Site preparation and demolition
3. Radiological soil screening (based on the conceptual site model [CSM] that there is potential for radiological isotopes to be present at IR Site 12)
4. Excavation of contaminated soil, including removal of free product at the Gateview Arsenic/TPH Area
5. Confirmation soil sampling
6. Transportation and disposal of soil and demolition debris to an off-site permitted landfill
7. Biostimulation (Gateview Arsenic/TPH Area only, and if necessary)
8. Site restoration
9. Demobilization

5.1.2 Contribution to Remedial Performance

The removal action is intended to be consistent with and will contribute to the final remedy for IR Site 12 by permanently removing COCs in soil in these portions of IR Site 12 and ultimately reducing the potential for dissolved arsenic in groundwater to discharge to surface water. The final remedy to address any remaining risk will be evaluated through the CERCLA process, presented in the Proposed Plan/Draft Remedial Action Plan (RAP) and documented in the ROD/RAP for IR Site 12.

5.1.3 Engineering Evaluation / Cost Analysis

Engineering evaluations and cost analyses are not required for TCRAs. However, remediation costs were developed based on the cost analyses within the FS and FS addendum (see [Section 5.2](#)).

5.1.4 Applicable or Relevant and Appropriate Requirements

Section 300.415(j) of the NCP provides that removal actions must attain ARARs to the extent practicable, considering the exigencies of the situation.

An ARAR analysis was conducted and included as Appendix C of the FS (KCH 2014). Potential chemical-, location-, and action-specific requirements identified in the FS for IR Site 12 have been updated based on the specifics of this TCRA. The ARARs are included as [Appendix A](#) in this action memorandum.

The removal action will meet the identified ARARs.

5.1.5 Project Schedule

The selected removal action is anticipated to take approximately 1 year, which will include time to prepare a RAWP and SAP, issue a work notice to local residents, mobilize necessary equipment, prepare the site for excavation, excavate contaminated soil, backfill (including biostimulation for the Gateview Arsenic/TPH Area, if necessary), transport and dispose of excavated soil off site, restore the site, and demobilize equipment from the site.

A public notice announcing a 30-day public comment period on the removal actions will be published within 60 days of initiating removal action field work, which is currently scheduled to start on March 29, 2016. A responsiveness summary of significant comments received during the comment period will be prepared. An index of the administrative record is included as [Appendix B](#). The Navy maintains the administrative record at two local information repositories: Building 1 on TI and at the San Francisco Main Public Library. For access to the Navy's administrative record, please contact:

Ms. Diane Silva, Command Records Manager
Naval Facilities Engineering Command Southwest DIV Code EV33
NBSD Building 3519
1220 Pacific Highway
San Diego, California 92132
Phone: (619) 556-1280
diane.silva@navy.mil

The NAVSTA TI restoration advisory board meets regularly, and the Navy may provide updates on the TCRA during the meetings and solicit any community feedback throughout the duration of the TCRA.

5.2 ESTIMATED COSTS

Cost estimates were prepared as part of the FS addendum. The cost analysis was based on estimates of capital, annual operation and maintenance (O&M), and periodic cost elements in combination with a calculation of net present value of these cost elements. Capital costs consist of direct and indirect costs. Direct costs include the purchase of equipment, contractor and subcontractor labor, and materials necessary for construction. Indirect costs include engineering, legal, construction management, and other technical and professional services such as testing and monitoring. Annual O&M costs include maintenance materials, supplies, and utilities, as well as operating labor. The accuracy of the cost estimates is intended to be within the range of plus 50 percent to minus 30 percent of actual costs. The level of detail employed in developing these estimates is considered appropriate for making choices among alternatives, but the cost estimates are not intended for use in detailed budgetary planning. A detailed cost estimate breakdown can be found in Appendix D of the FS addendum (KCH 2015).

Cost Summary for Selected Action

Former Naval Station Treasure Island, San Francisco, California

Removal Action Area	Capital Cost	Post-Construction Reporting Cost	Total Cost, Net Present Value ^{a,b,c}
Gateview TPH/Arsenic Area Excavation ^d	\$4,500,000	\$80,000	\$5,500,000
Discrete Locations in IR Site 12 Excavation ^e	\$430,000	\$80,000	\$610,000
Halyburton Court Area Excavation ^f	\$2,800,000	\$80,000	\$3,400,000

Notes:

Costs derived from KCH (2015).

^a Includes contingency (20 percent) and markups.

^b The present value is calculated by adding the capital costs to the post-construction reporting costs priced as of December 2012 (including contingency allowances); because the actions may be completed at different times, the present value was calculated on the basis of real discount rate, which essentially considers the effect of inflation on future cash flows.

^c Totals may not sum because of rounding and contingencies.

^d Costs based on an approximate areal extent of the smear zone as shown on [Figure 3](#) and to an approximate depth of 10.5 feet.

^e Costs based on an approximate areal extent as shown [Figure 4](#) and to an approximate depth of 4 feet.

^f Costs based on an approximate areal extent of the four building footprints (1100,1102, 1104 and 1106) and the areal extent of other locations shown on [Figure 5](#) outside of the building footprints and to an approximate depth of 4 feet.

The primary cost uncertainties are the volume of excavation required to remove free product (Appendix D of KCH 2015).

Deviations of the selected action in this action memorandum from the general cost assumptions in the FS addendum for Alternatives GW-4 and S-3 are listed below and may affect the total cost of the selected action:

- Possible differences in the number of buildings demolished (one building [1313] was budgeted in the FS addendum for Alternative GW-4 and up to eight buildings [1100, 1102, 1104, 1106, 1126, 1217, 1313, and possibly 1311] were budgeted in the FS addendum for Alternative S-3).
- Possible differences in the number of monitoring wells decommissioned during excavation activities.
- Excavated soils were assumed to be nonhazardous. Disposal costs would increase for any excavated soils characterized as hazardous.

6.0 EXPECTED CHANGE IN THE SITUATION SHOULD ACTION BE DELAYED OR NOT TAKEN

If action should be delayed or not taken, human and ecological receptors may be exposed to dissolved arsenic in groundwater at the Gateview Arsenic/TPH Area because TPH will continue to create a reducing environment, thereby contributing to concentrations of dissolved arsenic. Additionally, concentrations of PCBs, PAHs, dioxins and furans, or lead will remain in soil at the discrete locations and the Halyburton Court area. Contamination may spread to off-site areas through groundwater migration within the Gateview Arsenic/TPH Area or through surface water transport at the discrete locations and the Halyburton Court area. Spread of contamination may result in endangerment of off-site populations or aquatic environments.

7.0 OUTSTANDING POLICY ISSUES

No outstanding policy issues exist for this removal action.

8.0 ENFORCEMENT

To date, the Navy has not acquired evidence that identifies other potentially responsible parties at this site. However, information acquired in the future, including but not limited to information acquired during implementation of this removal action or future response actions at the site, could result in the identification of other potentially responsible parties.

9.0 RECOMMENDATION AND APPROVAL

This action memorandum was prepared in accordance with current EPA and Navy guidance documents for removal actions under CERCLA. Conditions at the Gateview Arsenic/TPH Area, discrete locations, and the Halyburton Court area meet the NCP criteria contained in 40 CFR § 300.415(b) for a removal action.

The decision represents the selected removal action for the Gateview Arsenic/TPH Area, discrete locations, and the Halyburton Court area, at IR Site 12 at the former NAVSTA TI in San Francisco, California, was developed in accordance with CERCLA as amended, and is not inconsistent with the NCP. This decision is based on the administrative record for the site.

APPENDIX A
APPLICABLE OR RELEVANT AND APPROPRIATE REQUIREMENTS

TABLE A-1: FEDERAL AND STATE CHEMICAL-SPECIFIC APPLICABLE OR RELEVANT AND APPROPRIATE REQUIREMENTS

Action Memorandum: Time-Critical Removal Actions for Installation Restoration Program Site 12,
Former Naval Station Treasure Island, San Francisco, California

Requirement	Prerequisite	Citation ^a	ARAR Determination	Comments
SOIL AND WASTE				
Federal				
Resource Conservation and Recovery Act (Title 42 U.S.C. Chapter 82, §§ 6901-6991[i])^b				
Defines RCRA hazardous waste. A solid waste is characterized as toxic, based on TCLP, if the waste exceeds the TCLP maximum concentrations.	Waste	Cal. Code Regs. tit. 22, §§ 66261.21, 66261.22(a)(1), 66261.23, 66261.24(a)(1), and 66261.100	Applicable	These regulations are applicable to activities that generate waste. The Navy will generate waste in implementation of the removal action. The Navy will determine whether the waste meets the definition of RCRA hazardous waste when it is generated.
Toxic Substances Control Act (Title 15 U.S.C. Chapter 53, §§ 2601-2692)^b				
Regulates the storage and disposal of PCB remediation waste. There are three options: (a) self-implementing on-site cleanup and disposal; (b) performance-based disposal using existing approved disposal technologies; and (c) risk-based disposal.	Soil, debris, sludge, or dredged materials contaminated with PCBs at concentrations greater than 50 mg/kg	40 CFR § 761.61(a)(4)(i)(A)	Relevant and Appropriate	The self-implementing cleanup goal for high occupancy site use of 1 mg/kg is identified as an ARAR, and the removal action goal for PCBs was based on this ARAR.

Action Memorandum: Time-Critical Removal Actions for Installation Restoration Program Site 12,
Former Naval Station Treasure Island, San Francisco, California

Location	Requirement	Prerequisite	Citation ^a	ARAR Determination	Comments
COASTAL ZONE					
Federal					
Coastal Zone Management Act (Title 16 U.S.C. Chapter 82, §§ 1451-1464)^b					
Within the coastal zone	Activities must be conducted in a manner consistent with approved state management programs.	Activities affecting the coastal zone including lands thereunder and adjacent shore land.	16 U.S.C. § 1456(c) 15 CFR §930	Relevant and appropriate	The coastal zone includes land within 150 feet of the shoreline. The Navy will excavate soil within 150 feet of the shoreline as part of this TCRA, and the Navy may construct a temporarily staging pile for the excavated soil within 150 feet of the shoreline. The Navy has accepted provisions of the McAteer-Petris Act, an approved state management program, as state ARARs. The Navy will comply with the CZMA ARAR by complying with the McAteer-Petris Act. The Navy will comply because the staging pile is temporary and will be removed when the excavated soil is disposed of off site; nothing permanent will be constructed.
State					
McAteer-Petris Act (California Government Code §§ 66600 through 66661)^b					
Within the San Francisco Bay coastal zone	Reduce fill and disposal of dredged material in San Francisco Bay, maintain marshes and mudflats to the fullest extent possible to conserve wildlife, abate pollution, and protect the beneficial uses of the Bay.	Waste	San Francisco Bay Plan at Cal. Code Regs. tit. 14, § 10110 through 11990	Relevant and appropriate	These regulations are part of the San Francisco Bay Plan, an approved state coastal zone management program. The Navy will not construct any permanent structure in the coastal zone and will not dispose of dredged material in the Bay.

SOIL EXCAVATION AND WASTE (Continued)					
Federal (Continued)					
Clean Air Act (42 U.S.C. §§ 7401-7671)^a					
Excavation	A person shall not emit from any source for a period or periods aggregating more than three minutes in any hour, a visible emission that is as dark or darker than Number 1 on the Ringelmann Chart, or of such opacity as to obscure an observer's view to an equivalent or greater degree.	Emission from any source	BAAQMD 6-1-301	Applicable	The Navy will use dust control practices during excavation to comply with this ARAR.
Excavation	A person shall not emit from any source for a period or periods aggregating more than 3 minutes in any hour an emission equal to or greater than 20 percent opacity as perceived by an opacity sensing device, when required by District regulations.	Emission from any source	BAAQMD 6-1-302	Applicable	The Navy will use dust control practices during excavation to comply with this ARAR.

SOIL EXCAVATION AND WASTE (Continued)					
Federal (Continued)					
Clean Water Act, as Amended (Title 33 U.S.C. chapter 26 §§ 1251-1387)^a					
Excavate soil	Construction that disturbs at least 1 acre must use best management practices to control storm water discharges.	Construction activities at least 1 acre in size.	Clean Water Act § 402 40 CFR § 122.44(k)(2) and (4)	Applicable	The Navy estimates it will affect more than 1 acre in the planned excavation of soil. The Navy will develop appropriate stormwater controls to comply with this ARAR.
State					
State Water Resources Control Board^a					
Store excavated soil in a temporary waste pile for off-site disposal	Store non-RCRA contaminated soil on impermeable surfaces of at least 20 mils, when supported by a foundation, or 60 mils, when not supported by a foundation; control windblown dispersion and precipitation runoff and runoff; inspect the temporary pile weekly and after storms to ensure that the controls are functioning properly; and inspect the accumulation site for contamination and remediate as necessary.	Temporary storage of non-RCRA contaminated soil	Cal. Health and Safety Code § 25123.3(b)(4)(B)	Relevant and appropriate	The Navy accepts the substantive requirements of this provision as ARARs if a temporary soil staging pile is constructed. These requirements are in addition to the temporary staging pile regulations identified as federal ARARs, and affect the design of the piles.

SOIL EXCAVATION AND WASTE (Continued)					
State (Continued)					
State Water Resources Control Board^a (Continued)					
Excavate soil	Most non-stormwater discharges without a permit are prohibited. Best management practices, stormwater pollution prevention plans, and monitoring are required to control stormwater discharges.	Construction site that disturbs one or more acres of soil.	SWRCB Order 2009-0009-DWQ, as amended by 2010, 0014-DWQ (General Construction Activity Storm Water permit)	TBC	The Navy estimates it will effect more than 1 acre in the planned excavation of soil. Pursuant to CERCLA § 121(e), removal actions conducted entirely on site are exempt from obtaining a permit. The excavation will occur entirely on Site 12. Therefore, the Navy is not required to submit a notice of intent to discharge stormwater under this permit. The Navy will, however, use the substantive provisions of this permit as means of complying with the federal Clean Water Act ARAR identified above.

Notes:

a	Statutes and policies, and their citations, are provided as headings to identify general categories of ARARs for the convenience of the reader; listing the statutes and policies does not indicate that the Navy accepts the entire statutes or policies as ARARs. Specific ARARs follow each general heading, and only substantive requirements of the specific citations are considered ARARs.

APPENDIX C
RESPONSE TO REGULATORY AGENCY COMMENTS

RESPONSE TO REGULATORY AGENCY COMMENTS ON THE DRAFT ACTION MEMORANDUM: REMOVAL ACTIONS FOR INSTALLATION RESTORATION SITE 12, NAVAL STATION TREASURE ISLAND, SAN FRANCISCO, CALIFORNIA

This document presents the response to regulatory agency comments on the “Draft Action Memorandum: Removal Actions for Installation Restoration Site 12, Former Naval Station Treasure Island, San Francisco, California,” dated June 2015. The comments addressed below were received from Remedios (Medi) Sunga of the California Department of Toxic Substances Control (DTSC) on July 7, 2015; and Myriam Zech of the San Francisco Bay Regional Water Quality Control Board (Water Board) on July 13, 2015.

RESPONSES TO DTSC COMMENTS (MEDI SUNGA)		
NO.	COMMENT	RESPONSE
1.	Document Title. Please change the document title to specify that this is a work plan for a time-critical removal action (TCRA). The title should be “Action Memorandum: Time-Critical Removal Action Work Plan for Installation Restoration Site 12.”	The document title has been changed to “Action Memorandum: <u>Time-Critical</u> Removal Actions for Installation Restoration Site 12.” (New text shown in <u>underlined italics</u> .) This document is not the removal action work plan, which is planned for draft distribution in early 2016.
2.	Concurrence Process. The 2007 Site 12 Action Memorandum (AM) for Non-Time Critical Removal Action (NTCRA) included a DTSC approval page. This draft Action Memorandum does not include DTSC as signatory. Please clarify DTSC's role and concurrence process on this AM/TCRA.	The Navy, as the lead agency, will sign the action memorandum to document its selection of a removal action for Site 12. The role of the state is described in Section 2.3 of the action memorandum. The Navy will add language to this section to indicate that the state will provide technical review and comment on the Navy’s development, selection, and implementation of the removal action.
3.	Section 1.0-Purpose, Page 1. This section states that the purpose of the TCRA is to remove contaminated soil from three areas at the southern half of Site 12. Please explain why removal of contaminated soil at the northern half was not included in this AM/TCRA. Please explain why a TCRA is needed at the southern portion of Site 12 and not at the northern portion where additional COCs exist, i.e., chromium and pesticides.	The focus of this TCRA was initially the Gateway Arsenic/TPH Area. With the completion of the feasibility study (FS) addendum, it became apparent that it was cost-effective to include Halyburton Court and the discrete locations within the southern portion of the site. However, the upcoming non-solid waste disposal area Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) record of decision/remedial action plan (ROD/RAP) for Site 12 will address all areas (southern and northern portions of the site).

RESPONSE TO REGULATORY AGENCY COMMENTS ON THE DRAFT ACTION MEMORANDUM: REMOVAL ACTIONS FOR INSTALLATION RESTORATION SITE 12, NAVAL STATION TREASURE ISLAND, SAN FRANCISCO, CALIFORNIA (Continued)

RESPONSES TO DTSC COMMENTS (MEDI SUNGA)		
NO.	COMMENT	RESPONSE
4.	Section 2.1.2-Physical Location, Page 5. Please specify the current land use of Site 12 which is residential, and clarify that there are no other sensitive land uses such as wetlands.	<p>Please refer to Section 2.1.3, which describes site characteristics including land uses. The following sentences have been added to the end of Section 2.1.3 (new text shown in <u>underlined italics</u>):</p> <p><u><i>“Presently, the habitat on TI is poor (TriEco-Tt 2012). No other sensitive land uses (wetlands or other) occur within the areas of IR Site 12 subject to this TCRA.”</i></u></p>
5.	Section 3.2-Threats to the Environment, Page 10. The last paragraph states "The presence of TPH, while not a COC, can cause conditions that will further contribute to dissolved arsenic. It is not clear why TPH is not a COC in this area since concentrations were above the TI remedial goals.	<p>As described previously in the document (Sections 1.0 and 2.1.4), response actions under CERCLA do not generally address petroleum because petroleum is excluded from the definition of a CERCLA hazardous substance. However, CERCLA response actions may address petroleum contamination if the petroleum contamination is collocated with a release of CERCLA hazardous substances. The total petroleum hydrocarbons (TPH) in soil and groundwater at the Gateview Arsenic/TPH Area (while not a CERCLA chemical of concern [COC]) is believed to contribute to the elevated concentrations of dissolved arsenic in groundwater. The planned soil removal action at the Gateview Arsenic/TPH Area will improve the subsurface conditions by removing saturated and unsaturated soil contaminated by TPH, thus reducing concentrations of dissolved arsenic in groundwater.</p> <p>No change has been made to the document as a result of this comment.</p>

6.1	<p>Section 5.1.1-Selected Action Description, Page 11.</p> <p>Second, Third and Fourth Bullets: Please relate the COCs with the chemicals cited in these bullets. The second bullet should state "Reduce risk to current and future residents by minimizing the dermal contact, incidental ingestion, and inhalation with soil containing known concentrations of PAHs based on BAP EQ that exceed the removal action goal."</p>	<p>The referenced bullets, which are the remedial action objectives defined in the final FS, were revised to read as follows (new text shown in <u>underlined italics</u>):</p> <ul style="list-style-type: none"> • “Reduce risk to current and future residents by minimizing the dermal contact, incidental ingestion, and inhalation with soil containing known concentrations of <u>PAHs based on</u> BAP EQ that exceed the removal action goal • Reduce risk to current and future residents by minimizing the dermal contact, incidental ingestion, and inhalation with soil containing known concentrations of <u>PCBs (as total Aroclors)</u> that exceed the removal action goal • Reduce risk to current and future residents by minimizing the dermal contact, incidental ingestion, and inhalation with soil containing known concentrations of <u>dioxins and furans (as 2,3,7,8-tetrachloro-p-dibenzo-dioxin [TCDD] toxicity equivalent [TEQ])</u> above the removal action goal”
6.2	<p>Section 5.1.1-Selected Action Description, Page 11.</p> <p>Please discuss the volume of soil that will be removed from each area which is also the basis for the cost estimates.</p>	<p>The approximate volume of soil will be determined in the upcoming TCRA work plan that will be reviewed by stakeholders. Costs included in this AM are generally based on Appendix D of the FS addendum but have been revised, as appropriate, to meet the variances in the TCRA.</p>

7.	Section 5.1.4-ARARs, Page 13. GW-4 and S-3 were mentioned in this section for the first time in the document. Please discuss the details of these alternatives and the areas they address within Site 12.	<p>Please refer to Section 5.0 and its subsections for a description of the selected removal action. The Final Action Memorandum includes applicable or relevant and appropriate requirements (ARARs) specific to this TCRA, rather than including the ARARs identified in the FS for Alternatives GW-4 and S-3. The second paragraph of Section 5.1.4 was revised accordingly (new text shown in <u>underlined italics</u>, deleted text shown in strikeout):</p> <p>“An ARAR analysis was conducted and included as Appendix C of the FS (KCH 2014). Potential chemical-, location-, and action-specific requirements identified in the FS for IR Site 12 and Alternatives GW-4 and S-3 are identified as the ARARs for this removal action <u>have been updated based on the specifics of this TCRA</u>. The ARARs will <u>are</u> included as Appendix A in the final version of this action memorandum.”</p>

8.1	<p>Section 5.1.5-Project Schedule, Page 14.</p> <p>This section states that a public notice will be published announcing the availability of the administrative record for a 30-day public comment period. Please include the administrative record in the AM/TCRA that will be subjected to the 30-day public comment period. Will the entire administrative record be subjected to the public comment period or just the AM/TCRA?</p>	<p>Section 5.1.5 has been revised as follows (new text shown in <u>underlined italics</u>, deleted text shown in strikeout):</p> <p>“The selected removal action is anticipated to take approximately 1 year, which will include adequate time to publish a public notice announcing the availability of the administrative record for the site and project, fulfill a 30 day public comment period, prepare a responsiveness summary of significant comments received during the comment period, prepare a RAWP and SAP, distribute a 60 day notice before the TCRA is implemented, <u>issue a work notice to local residents</u>, mobilize necessary equipment, prepare the site for excavation, excavate contaminated soil, backfill (including biostimulation for the Gateview Arsenic/TPH Area, if necessary), transport and dispose of excavated soil off site, restore the site, and demobilize equipment from the site.</p> <p><u>A public notice announcing a 30-day public comment period on the removal actions will be published within 60 days of initiating removal action field work, which is currently scheduled to start on March 29, 2016. A responsiveness summary of significant comments received during the comment period will be prepared. An index of the administrative record is included as Appendix B. The Navy maintains the administrative record at two local information repositories: Building 1 on TI and at the San Francisco Main Public Library. For access to the Navy’s administrative record, please contact:</u></p> <p style="margin-left: 40px;"><u>Ms. Diane Silva, Command Records Manager</u> <u>Naval Facilities Engineering Command Southwest DIV Code EV33</u> <u>NBSD Building 3519</u> <u>1220 Pacific Highway</u> <u>San Diego, California 92132</u> <u>Phone: (619) 556-1280</u> diane.silva@navy.mil</p> <p>The NAVSTA TI restoration advisory board meets regularly, and the Navy may provide updates on the TCRA during the meetings and solicit any community feedback throughout the duration of the TCRA.”</p>

RESPONSES TO DTSC COMMENTS (MEDI SUNGA)		
NO.	COMMENT	RESPONSE
8.2	<p>Section 5.1.5-Project Schedule, Page 14.</p> <p>The public involvement process discussed in this section is inconsistent with EPA's 2000 Action Memoranda guidance document that states "The administrative record file for time-critical removal actions, and emergency responses, should be made available for public inspection no later than 60 days after the initiation of on-site activity. Public comment periods should be held in appropriate situations at the time the record file is made available and should be no less than 30 days." The process discussed appears to be for NTCRA without an Engineering Evaluation/Cost Analysis (EE/CA). Please explain the variation from the EPA guidance.</p>	<p>Section 5.1.5 has been revised based on this comment and comment 8.1, as described in the response above.</p>
9.1	<p>Section 5.2-Estimated Costs, Pages 14 and 15. Please revise the cost estimates in the summary table on page 15 based on the following comments.</p> <p>It is not clear how the costs in the summary table were estimated since the net present value estimates in the Final Feasibility Study (FFS) Addendum for S-3 soil removal throughout Site 12 is \$4,936,000 and the GW-4 groundwater remediation is \$6,789,527 for Year 1. The estimate in the summary table indicates that soil removal at the remaining northern portion of Site 12 would only cost about half million.</p>	<p>The TCRA cost estimates were developed by calculating unit rates using the cost totals from the FS addendum and then revising, as appropriate, to meet the variances in the TCRA.</p> <p>After further review of the cost summary table, the costs have been revised for each area and more detail has been added to the table notes. The Gateview Arsenic/TPH excavation area roughly corresponds to the approximate smear zone shown in Figure 3 and to a depth of up to 10.5 feet below ground surface (bgs). The discrete locations and Halyburton Court roughly correspond to the estimated areal extent and a general depth of 4 feet bgs. Actual quantities, areal extent, and excavation depths will be refined in the upcoming TCRA work plan that will be reviewed by stakeholders. Revisions to the summary table are as follows (new text shown in <u>underlined italics</u>; the table columns have been compressed to fit below):</p>

9.2	<p>Section 5.2-Estimated Costs, Pages 14 and 15. Please revise the cost estimates in the summary table on page 15 based on the following comments.</p> <p>The operation and maintenance (O&M) cost of soil removal would be less than the groundwater cleanup since soil removal O&M only includes removal completion report and close-out documentation, per the FFS Addendum, that are not actual O&M activities. While the groundwater cleanup cost estimates in the FFS Addendum include 10 years of monitoring and reporting.</p>	<p>The FS addendum included reporting as part of O&M costs; however, to avoid confusion, the table has been updated to revise the column title to Post-Construction Reporting Cost.</p>
9.3	<p>Section 5.2-Estimated Costs:</p> <p>O&M costs for removal actions at Discrete Locations and Halyburton Court should not be included in the estimate since removal goals will achieve the unrestricted use of these areas.</p>	<p>See revisions per response to comment number 9.2.</p>

RESPONSE TO REGULATORY AGENCY COMMENTS ON THE DRAFT ACTION MEMORANDUM: REMOVAL ACTIONS FOR INSTALLATION RESTORATION SITE 12, NAVAL STATION TREASURE ISLAND, SAN FRANCISCO, CALIFORNIA (Continued)

RESPONSE TO WATER BOARD COMMENT (MYRIAM ZECH)		
NO.	COMMENT	RESPONSE
1.	I have but one comment regarding the subject document, regarding sea level rise (SLR). Treasure Island redevelopment plans do not appear to include specific features to protect Site 12 (and the TCRA areas) from potential inundation due to sea level rise (SLR). Without such features, potential mobilization of residual soil contaminants at Site 12 becomes a valid concern that will need to be addressed either by the Navy, City, TIDA, or developer. In either case, we will look to the Site 12 Record of Decision to demonstrate remedy protectiveness under current and reasonably foreseeable future site conditions.	Removal and reduction of contaminants would reduce potential mobilization should inundation occur. Furthermore, sea level rise is addressed in the Hydrology and Water Quality Section of the 2011 Environmental Impact Report (EIR) for Treasure Island/Yerba Buena Island Redevelopment Project (City and County of San Francisco [CCSF] 2011). Among other measures identified in the EIR, “the perimeter berm would be raised where necessary to prevent significant wave overtopping onto the perimeter open space during storm events, for up to 16 inches of sea level rise from present-day sea levels.” No change has been made to the action memorandum as a result of this comment.
