**Notes and Abbreviations:**

1. Results validated following protocols specified in May 2014 Pre-Design Work Plan for Groundwater Hotspot (ARCADIS, 2014).
2. Samples analyzed for the TCL VOCs using USEPA Method 8260.
3. TVOCs represent sum of VOCs and are rounded to two significant figures. 1,4-dioxane not included in sum of VOCs.

**Bold value indicates a detection**

| | |
|---|---|
| | Indicates an exceedance of an SCG |
| NYSDEC | New York State Department of Environmental Conservation |
| USEPA | United States Enviromental Protection Agency |
| TCL | Target compound list |
| VOCs | Volatile organic compounds |
| SCGs | Standard, criteria, and guidance values |
| ft bls | Feet below land surface |
| ug/L | Micrograms per liter |
| TVOCs | Total volatile organic compounds |
| NE | Not established |
| REP | Field replicate |
| J | Value is estimated |
| D | Value from a secondary dilution |
| -- | Not analyzed |
| B | Compound detected in associated blank sample |
| <10.0 | Compound not detected above its laboratory quantification limit |

Notes and Abbreviations on last page.

**Notes and Abbreviations:**

(1) VOC samples analyzed using USEPA Method 8260C.
(2) Results validated following protocols specified in OU2 Groundwater Monitoring Plan (ARCADIS 2014).
(3) Standards, Criteria, and Guidance (SCG) values based on documents referenced in the Groundwater Feasibility Study Report (ARCADIS Geraghty & Miller, Inc. 2000) that are based on the NYSDEC TOGs (NYSDEC 1998); most stringent values are listed.
(4) Total VOC results rounded to two significant figures.

| | |
|---|---|
| | Compound detected in exceedance of NYSDEC SCG Criteria |
| <5.0 | Compound is not detected above its laboratory quantification limit |
| µg/L | Micrograms per liter |
| **Bold** | Value indicates a detection |
| D | Concentration is based on a diluted sample analysis |
| J | Constituent value is estimated |
| NYSDEC | New York State Department of Conservation |
| OU2 | Operable Unit 2 |
| REP | Field Replicate Sample |
| SCG | Standards, Criteria, and Guidance value |
| VOCs | Volatile Organic Compounds |

**Table 11**

**Table 11**
**Concentrations of Volatile Organic Compounds in Groundwater Samples Collected from Wells in the Shallow Zone [(1)], Operable Unit 2, Northrop Grumman Systems Corporation, Bethpage, New York**

**Notes and Abbreviations:**

(1) Well identification (e.g., GM-15I) does not necessarily designate the actual hydrogeologic zone. Determination of the hydrogeologic zone is based on the well screen interval and the regional model layering.

(2) Standards, Criteria, and Guidance (SCG) values based on documents referenced in the Groundwater Feasibility Study Report (ARCADIS Geraghty & Miller, Inc. 2000) that are based on the NYSDEC TOGs (NYSDEC 1998); most stringent values are listed.

Results validated following protocols specified in OU2 Groundwater Monitoring Plan (ARCADIS 2014).
Samples analyzed for the TCL VOCs using USEPA Method 8260C.
TVOCs are rounded to two significant figures.
**Bold** value indicates a detection.

| | |
|---|---|
| NYSDEC | New York State Department of Environmental Conservation |
| USEPA | United States Environmental Protection Agency |
| VOCs | Volatile Organic Compounds |
| TVOCs | Total Volatile Organic Compounds |
| SCG | Standards, Criteria and Guidance Value |
| µg/L | micrograms per Liter |
| J | Value is estimated concentration |
| TCL | Target Compound List |
| TOGs | Technical and Operational Guidance Series |
| < 5.0 | Compound not detected above its laboratory quantification limit. |
| | Compound detected in exceedance of NYSDEC SCG Criteria |
| OU2 | Operable Unit 2 |
| REP | Blind duplicate sample |

See Notes and Abbreviations on Last Page

**Notes and Abbreviations:**

(1) Well identification (e.g., GM-15I) does not necessarily designate the actual hydrogeologic zone. Determination of the hydrogeologic zone is based on the well screen interval and the regional model layering.

(2) Standards, Criteria, and Guidance (SCG) values based on documents referenced in the Groundwater Feasibility Study Report (ARCADIS Geraghty & Miller, Inc. 2000) that are based on the NYSDEC TOGs (NYSDEC 1998); most stringent values are listed.

Results validated following protocols specified in OU2 Groundwater Monitoring Plan (ARCADIS 2014).
Samples analyzed for the TCL VOCs using USEPA Method 8260C.
TVOCs are rounded to two significant figures.
**Bold** value indicates a detection.

| | |
|---|---|
| NYSDEC | New York State Department of Environmental Conservation |
| USEPA | United States Environmental Protection Agency |
| VOCs | Volatile Organic Compounds |
| TVOCs | Total Volatile Organic Compounds |
| SCG | Standards, Criteria and Guidance Value |
| µg/L | micrograms per Liter |
| J | Value is estimated concentration |
| TCL | Target Compound List |
| TOGs | Technical and Operational Guidance Series |
| < 5.0 | Compound not detected above its laboratory quantification limit. |
| | Compound detected in exceedance of NYSDEC SCG Criteria |
| OU2 | Operable Unit 2 |

See Notes and Abbreviations on last page.

**Notes and Abbreviations:**

(1) Well identification (e.g., GM-70D2) does not necessarily designate the actual hydrogeologic zone. Determination of the hydrogeologic zone is based on the well screen interval and the regional model layering.

(2) Standards, Criteria, and Guidance (SCG) values based on documents referenced in the Groundwater Feasibility Study Report (ARCADIS Geraghty & Miller, Inc. 2000) that are based on the NYSDEC TOGs (NYSDEC 1998); most stringent values are listed.

Results validated following protocols specified in OU2 Groundwater Monitoring Plan (ARCADIS 2014).

Samples analyzed for the TCL VOCs using USEPA Method 8260C.

TVOCs are rounded to two significant figures.

**Bold** value indicates a detection.

| | |
|---|---|
| NYSDEC | New York State Department of Environmental Conservation |
| USEPA | United States Environmental Protection Agency |
| VOCs | Volatile Organic Compounds |
| TVOCs | Total Volatile Organic Compounds |
| µg/L | micrograms per liter |
| SCG | Standards, Criteria and Guidance Value |
| J | Value is estimated concentration. |
| OU2 | Operable Unit 2 |
| TCL | Target Compound List |
| TOGs | Technical and Operational Guidance Series |
| < 5.0 | Compound not detected above its laboratory quantification limit. |
| | Compound detected in exceedance of NYSDEC SCG Criteria |
| REP | Blind duplicate sample |

See Notes and Abbreviations on last page.

**Notes and Abbreviations:**

(1) Well identification (e.g., GM-34D) does not necessarily designate the actual hydrogeologic zone. Determination of the hydrogeologic zone is based on the well screen interval and the regional model layering.

(2) Standards, Criteria, and Guidance (SCG) values based on documents referenced in the Groundwater Feasibility Study Report (ARCADIS Geraghty & Miller, Inc. 2000) that are based on the NYSDEC TOGs (NYSDEC 1998); most stringent values are listed.

(3) Supplememtal wells GM-21D2, GM-73D3, GM-74D3, GM-78D , GM-78D2 and MW3-1 were sampled during the Second Quarter 2015 as per the recommendation from "2014 Annual Groundwater Monitoring Report, ARCADIS, March 30, 2015".

Results validated following protocols specified in OU2 Groundwater Monitoring Plan (ARCADIS 2014).
Samples analyzed for the TCL VOCs using USEPA Method 8260C.
TVOCs are rounded to two significant figures.
**Bold** value indicates a detection.

See Notes and Abbreviations on Last Page

**Notes and Abbreviations:**

(1) Well identification (e.g., GM-73D3) does not necessarily designate the actual hydrogeologic zone.
Determination of the hydrogeologic zone is based on the well screen interval and the regional model layering.

(2) Standards, Criteria, and Guidance (SCG) values based on documents referenced in the Groundwater Feasibility Study Report (ARCADIS Geraghty & Miller, Inc. 2000) that are based on the NYSDEC TOGs (NYSDEC 1998); most stringent values are listed.

(2) Supplememtal wells GM-21D2, GM-73D3, GM-74D3, GM-78D , GM-78D2 and MW3-1 were sampled during the Second Quarter 2015 as per the recommendation from "2014 Annual Groundwater Monitoring Report, ARCADIS, March 30, 2015".

Results validated following protocols specified in OU2 Groundwater Monitoring Plan (ARCADIS 2001; 2006; 2014; 2016).

Samples analyzed for the TCL VOCs using USEPA Method 8260C.

TVOCs are rounded to two significant figures.

**Bold** value indicates a detection.

**Notes and Abbreviations:**

(1) Wells BPOW1-4, BPOW1-5, BPOW1-6, BPOW3-3, and BPOW3-4 are currently monitored by Northrop Grumman on a voluntary basis.
The screen intervals for these wells were selected by the Navy based on data obtained from vertical profile borings VP-127 (BPOW-1 cluster) and VP-128 (BPOW-3 cluster).

(2) The NAVY abandoned original Wells BPOW4-1 and BPOW4-2 and installed replacement Wells BPOW4-1R and BPOW4-2R between August, 2014 and October, 2014.

(3) Standards Critieria and Guidance (SCGs) values based on the document referenced in Groundwater Feasibility Study Report (ARCADIS Geraherty & Miller, Inc. 2000) that are based on the NYSDEC TOGs (NYSDEC 1998); most stringent values listed.

(4) Site-related VOCs were established for the wells identified above in the Public Water Supply Contingency Plan (PWSCP) (ARCADIS G&M, Inc. 2003).

(5) The TVOC Trigger Value for Cluster 1 was initially exceeded on April 23, 2004; confirmatory sampling and reporting was conducted as per the PWSCP (ARCADIS G&M, Inc. 2003).
TVOC Trigger Values were established for Wells BPOW1-1, BPOW1-2, BPOW1-3, BPOW3-1, BPOW3-2, BPOW4-1, and BPOW4-2 in the PWSCP (ARCADIS G&M, Inc. 2003).
Established trigger values have been previously exceeded (except for BPOW 3-1 and BPOW 3-2) and no longer apply as the goal of PWSCP has been met.

Samples analyzed for site-related VOCs per the PWSCP (ARCADIS G&M, Inc. 2003) using USEPA Method 524.2
Total Site-Related VOCs and TVOCs are rounded to two significant figures.
**Bold value indicates constituent detected.**

| | |
|---|---|
| | Compound detected in exceedance of NYSDEC SCG Criteria |
| NYSDEC | New York State Department of Environmental Conservation |
| TVOCs | Total Volatile Organic Compounds |
| TOGs | Technical and Operational Guidance Series |
| USEPA | United States Environmental Protection Agency |
| VOC | Volatile Organic Compounds |
| µg/L | micrograms per liter |
| <0.5 | Compound not detected above its laboratory quantification limit. |
| SCG | Standards, Criteria and Guidance Value |
| J | Value is estimated concentration |
| B | Compound detected in associated blank sample |
| D | Concentration is based on a diluted sample analysis |
| NE | Not Established |
| REP | Blind duplicate sample |

Dear Steve:

Enclosed are the results of Operable Unit 3 Bethpage Park Groundwater Containment System (OU3 BPGWCS) operation and monitoring, performed in accordance with the NYSDEC-approved OU3 Groundwater IRM OM&M Manual (ARCADIS 2009) and the NYSDEC-approved Sampling and Analysis Plan (SAP; ARCADIS 2009). As we have transitioned to electronic submittals (via PDF) as part of ongoing sustainability and cost savings efforts, hard copies of the report can be provided on request.

If you have any questions, please do not hesitate to contact us.

Sincerely,

Arcadis of New York, Inc.

David E. Stern

Senior Hydrogeologist

Enclosure

**Table 14**
**Concentrations of Volatile Organic Compounds and 1,4-Dioxane in Groundwater Samples Collected from Monitoring Wells, Bethpage Park Groundwater Containment System, OU3 (Former Settling Ponds) Bethpage, New York.**

**Notes and Abbreviations:**

(1) Results validated following protocols specified in Sampling and Analysis Plan in the December 2009 OM&M Manual (ARCADIS 2009).

(2) Samples analyzed for the TCL VOCs using NYSDEC ASP 2005 Method OLM4.3 (prior to November 2014) and per USEPA Method 9260C (after November 2014). Samples analyzed for 1,4-Dioxane using USEPA Method 8270 SIM.

(3) "Total VOCs" represents the sum of individual concentrations of the VOCs detected. TVOCs were rounded to two significant figures.

(4) "Project VOCs" represents the sum of individual compound concentrations of 1,1,1-Trichloroethane; 1,1-Dichloroethane; 1,2-Dichloroethane; 1,1-Dichloroethene; Tetrachloroethene; Trichloroethene; Vinyl Chloride; cis-1,2-Dichloroethene; trans-1,2-Dichloroethene; Benzene; Toluene; and Xylenes-o,m, and p.

*italicized indicates most recent data*

Indicates an exceedance of an SCG.

Bold value indicates a detection.

**Notes:**
B - Method blank contamination
J - Estimated result between laboratory method detection limit and reporting limit
N/A - Not Applicable
ND - Not detected above laboratory method detection limit. Limit of detection (LOD) given in parentheses.
NR - Not Recorded
gpm - gallons per minute

(1) On 1 July 2015, the RW-1 flowrate was increased from ~800 gpm to ~1,000 gpm and RW-3 was taken off-line, as approved by NYSDEC on 20 April 2015. Influent concentrations presented above are therefore equivalent to RW-1 concentrations only.
(2) To maintain the integrity of RW-3 for potential future use, approximately 200 gallons per minute of water are pumped for a 1-hour period from the well on a monthly basis. RW-3 is sampled semi-annually, consistent with the groundwater monitoring program.
(3) Monthly process samples were collected on 9/6/16. Changeout of the liquid phase granular activated carbon (LGAC) was performed on 9/20/16.

| Mercury (EPA 245.1) ug/L | ND | ND | ND | ND | ND | ND | ND | ND | ND | ND |
| TSS (SM20 2540D) mg/L | ND | 1.8 | 3.8 | ND | ND | ND | 1.1 | 1.4 | ND | ND |

**Notes:**
J = estimated value
ND = Not detected above laboratory method detection limit
mg/L = milligrams per liter
µg/L = micrograms per liter

(1) Samples were analyzed for TCL VOCs. Only those VOCs detected are presented above.
(2) RW-3, previously an active extraction well sampled on a monthly basis, was taken off-line on 7/1/15. RW-3 is now sampled semi-annually, in conjunction with the semi-annual LTM events.

**Note:**
VOC analysis changed from SW846 8260B to EPA Method 624 in January 2010.
D = Dilution
J = estimated value
ND = not detected
NR = not reported / required
R = rejected
mg/L - milligrams per liter
µg/L - micrograms per liter

(1) Analytical results presented above for samples collected from RW3-MW3 and RW3-MW4 in November 2010 are not consistent with historical trends, indicating samples may have been switched. For trend analysis, concentrations for RW3-MW3 were used for RW3-MW4 for November 2010 and vise versa.

(2) VOCs were analyzed by USEPA Method 524.2 (as opposed to Method 624) in June 2013 to correlate with samples collected under the Bethpage Regional Plume Comprehensive Groundwater Sampling Plan conducted in June 2013.

(3) RW-3, previously an active extraction well sampled on a monthly basis, was taken off-line on 7/1/15. RW-3 is now sampled semi-annually, in conjunction with the semi-annual LTM events.

(4) Samples were analyzed for TCL VOCs, including tentatively identified compounds (TICs), beginning in March 2016. No TICs were detected, unless otherwise indicated.

Data prior to June 2011 were collected by others.

Dear Mr. Negrelli:

Re: Quarterly Report – Fourth Quarter 2015 (October through December)
Administrative Orders Hooker Chemical/Ruco Polymer Corporation Site
Index Nos. II-CERCLA-80216, II-CERCLA-94-0210, and II-CERCLA-02-2001-2018

This submittal provides the Quarterly Progress Report covering October through December 2015 for the Hooker/Ruco Site in Hicksville, New York. This Report covers OU-1, OU-2, and OU-3. Please note that the next Quarterly Progress Report will be submitted by April 15, 2016 and will cover January through March 2016. A listing of the primary activities is provided in Table 1.

## Quarterly Progress Report

The following activities were performed during the period October through December 2015:

- The Quarterly Progress Report for the time period July through September 2015 was submitted to the USEPA on October 7, 2015.

### *Operable Unit 1 (On-Site Soil)*

All work has been successfully completed. OU-1 is closed.

### *Operable Unit 2 (Soils Impacted by On-Site Release of PCBs)*

All work has been successfully completed. OU-2 is closed.

UG_L = Micrograms per liter
NA = Not applicable
Qual = Final qualifiers (See Attachment A)
RC = Reason codes (See Attachment B)

Attachment A
Final Qualifier Codes and Explanations

| Qualifier | Explanation |
|---|---|
| J | The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample. |
| UJ | The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual quantitation limit necessary to accurately and precisely measure the analyte in the sample. |
| U | The analyte was analyzed for, but was not detected above the reported sample quantitation limit. |

Attachment B
Reason Codes and Explanations

| Reason Code | Explanation |
|---|---|
| be | Equipment blank contamination |
| bf | Field blank contamination |
| bl | Laboratory blank contamination |
| bm | Missing Blank Information |
| bt | Trip blank contamination |
| c | Calibration issue |
| cr | Chromatographic resolution |
| d | Reporting limit raised due to chromatographic interference |
| dt | Dissolved result > total over limit |
| e | Ether interference |
| ej | Above calibration range; result estimated. |
| f | Presumed contamination from FB or ER. |
| fd | Field duplicate RPDs |
| h | Holding times |
| hs | Headspace greater than 6mm in all sample vials |
| i | Internal standard areas |
| ii | Injection internal standard area or retention time exceedance |
| it | Instrument Tune |
| k | Estimated Maximum Possible Concentrations (EMPC) |
| l | LCS recoveries |
| lc | Labeled compound recovery |
| ld | Laboratory duplicate RPDs (matrix duplicate, MSD, LCSD) |
| lp | Laboratory control sample/laboratory control sample duplicate RPDs |
| m | Matrix spike recovery |
| mc | Deviation from the method |
| md | MS/MSD precision |
| nb | Negative laboratory blank contamination |
| p | Chemical preservation issue |
| p-h | Uncertainty near detection limit (< Reporting Limit), historical reason code applied. |
| pe | Post Extraction Spike |
| q | Quantitation issue |
| r | Dual column RPD |
| rt | SIM ions not within + 2 seconds |
| s | Surrogate recovery |
| sp | Sample preparation issue |
| su | Evidence of ion suppression |
| t | Temperature Preservation Issue |
| x | Low % solids |
| y | Serial dilution results |
| z | ICS results |
