SUBJECT: DRINKING WATER SAMPLING RESULTS IN THE VICINITY OF

NAVAL SUPPORT ACTIVITY (NSA) CUTLER FIRE STATION

(SAMPLE: «DW#»)

Dear Mr./Mrs. «first» «last»:

Thank you for recently allowing the Navy to sample your drinking water well at «Owner Address_1», «City_and_1» for certain per- and polyfluoroalkyl substances (PFAS). I am writing today to provide you with the validated test results of your residence's drinking water in the enclosures to this letter.

The validated test results confirm that your drinking water is above the U.S. Environmental Protection Agency (EPA) lifetime health advisory for two PFAS, specifically perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS). The enclosures also provide the test results for other PFAS compounds included in the drinking water test method used for this investigation (EPA Method 537.1); however, there are no lifetime health advisories for these compounds at this time. As our team explained when you were first notified of the preliminary results, the Navy will continue to provide you with drinking and cooking water until a more permanent solution is implemented.

The Navy continues to work in partnership with the Maine Department of Environmental Protection, Maine Department of Health and Human Services, and Agency for Toxic Substances and Disease Registry (ATSDR) Region 1. The Navy is committed to keeping you informed on developments and will update our public website at https://go.usa.gov/xwfdW about the PFAS investigation and additional actions the Navy is taking to address exposure to PFOA and PFOS above the EPA lifetime health advisory.

Additional informative resources on PFAS can be found at the Assistant Secretary of the Navy (Energy, Installations & Environment) website on PFAS and at U.S. EPA's website on the Drinking Water Health Advisories for PFOA and PFOS. Both links are provided below:

ASN (EI&E)

https://www.secnav.navy.mil/eie/pages/pfc-pfas.aspx

EPA

https://www.epa.gov/ground-water-and-drinking-water/drinking-water-health-advisories-pfoa-and-pfos

If you have any health questions or concerns, I encourage you to contact your health care provider. If you have any questions about this letter, please contact the Navy Public Affairs Office at NAVFAC ML PAO@navy.mil or (800)915-4705.

We appreciate your continued cooperation as we work to ensure that human health and the environment are protected. We will continue to supply you an alternate water source for drinking and cooking and remain committed to the safety and health of our neighbors.

Sincerely,

DANIEL W. ETTLICH
Captain, U.S. Navy
Installation Commanding Officer

Enclosures:

- 1. Validated Sample Results
- 2. Lab Results
- 3. Explanation of Lab Results

Enclosure 1 Validated Sample Results

| Name: | |
|-----------------|--|
| Address: | |
| Sample ID: | |
| Date Collected: | |
| Time Collected: | |

Below are the validated test results confirming that your drinking water has greater than the U.S. Environmental Protection Agency's (EPA) lifetime health advisory levels for certain per- and polyfluoroalkyl substances (PFAS). The Navy will continue to deliver bottled water to your property at no cost to you, until a long-term solution can be implemented. The Navy is working in partnership with the Maine Department of Environmental Protection, Maine Department of Health and Human Services, U.S. EPA Region 1, and Agency for Toxic Substances and Disease Registry (ATSDR) Region 1.

Results of Laboratory Analytical Tests for PFAS with EPA Lifetime Health Advisory Levels

| Chemical Name | Result | Health Advisory (ppt) | | |
|----------------------------------|-----------------------|-----------------------|--|--|
| perfluorooctanoic acid (PFOA) | Value or Not Detected | 70 | | |
| perfluorooctane sulfonate (PFOS) | Value or Not Detected | 70 | | |
| Total PFOA-PFOS (sum) | Value or Not Detected | 70 | | |

ppt – parts per trillion (1 ppt = 1 ng/L (nanogram per liter))

J - The reported result is an estimated value.

Results for Other PFAS with No Established EPA Lifetime Health Advisory Levels

| Chemical Name | Result | Other Screening Value, if available (ppt) N/A | | |
|--|-----------------------|--|--|--|
| perfluorohexanoic acid (PFHxA) | Value or Not Detected | | | |
| perfluoroheptanoic acid (PFHpA) | Value or Not Detected | N/A | | |
| perfluorononanoic acid (PFNA) | Value or Not Detected | N/A | | |
| perfluorodecanoic acid (PFDA) | Value or Not Detected | N/A | | |
| perfluoroundecanoic acid (PFUnA) | Value or Not Detected | N/A | | |
| perfluorododecanoic acid (PFDoA) | Value or Not Detected | N/A | | |
| perfluorotridecanoic acid (PFTrDA) | Value or Not Detected | N/A | | |
| perfluorotetradecanoic Acid (PFTeDA) | Value or Not Detected | N/A | | |
| n-methylperfluorooctanesulfonamidoacetic acid (NMeFOSAA) | Value or Not Detected | N/A | | |
| n-ethylperfluoroctanesulfonamidoacetic acid (NEtFOSAA) | Value or Not Detected | N/A | | |
| perfluorobutanesulfonic acid (PFBS) | Value or Not Detected | 400,000 * | | |
| perfluorohexanesulfonic acid (PFHxS) | Value or Not Detected | N/A | | |
| hexafluoropropylene oxide dimer acid (HFPO-DA) | Value or Not Detected | N/A | | |
| 4,8-dioxa-3H-perfluorononanoic acid (Adona) | Value or Not Detected | N/A | | |
| 11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS) | Value or Not Detected | N/A | | |
| 9-chlorohexadecafluoro-3-oxanone-1-sulfonic acid (9CI-PF3ONS) | Value or Not Detected | N/A | | |

ppt – parts per trillion (1 ppt = 1 ng/L (nanogram per liter))

 $\mbox{\ensuremath{\mathsf{J}}}\mbox{\ensuremath{\mathsf{-}}}\mbox{\ensuremath{\mathsf{The}}}\mbox{\ensuremath{\mathsf{reported}}}\mbox{\ensuremath{\mathsf{res}}}\mbox{\ensuremath{\mathsf{ul}}}\mbox{\ensuremath{\mathsf{e}}}\mbox{\ensuremat$

N/A - Not available.

*Although there is not a health advisory for PFBS, EPA has estimated a toxicity value for possible health effects when PFBS is ingested. This toxicity value was used by the EPA to calculate a "Regional Screening Level" or RSL. The RSL is a conservative, risk-based level that is used at "Superfund" sites to identify sites that may warrant further investigation or site cleanup.

Enclosure 3 (page 1 of 2): Explanation of Laboratory Results

You will notice that the data report comes with several laboratory descriptions that may not be familiar to you. The following definitions of those descriptions may assist you in understanding your sample results:

- Analyte the chemical or substance of interest.
- **CAS No.** (Chemical Abstracts Service Number) a universal system to provide a unique, unmistakable identifier for chemical substances.
- Result (ng/L) the amount of an analyte (chemical or substance of interest) determined to be present in the sample analyzed by the laboratory; the reporting units ng/L (nanograms per liter) is the same as ppt (parts per trillion)
- **Detection Limit (DL)** The lowest analyte concentration that can confidently be distinguished from zero (or a blank) concentration.
- **Limit of Detection (LOD)** The lowest analyte concentration that must be present in a sample to be confidently (i.e., consistently) detectable.
- **Limit of Quantitation (LOQ)** The lowest concentration that produces a quantitative result within known and recorded precision and accuracy.
- Non-Detect (ND) indicates the analyte was not detected.
- Qualifiers (if needed)
 - o "J" (Estimated Value) indicates the value reported for the analyte is above the DL but below the LOQ and was detected. The value reported is considered estimated.

Enclosure 3 (page 2 of 2): Explanation of Lab Results - Example of Lab Report with Definitions and Explanations

This is a data qualifier for this result. Possible qualifiers are:

[&]quot;J" (Estimated Value) - Indicates the value reported for the analyte is greater than the DL but below the LOQ and was detected. The value reported is considered estimated.

[&]quot;B" (Blank) - Indicates the compound also was detected in the method blank.
