Dates Collected

Below are the validated test results from the treatment system that was installed on your property on **Month Date, Year** to reduce levels of PFOA and PFOS in your drinking water. Samples were collected at several locations: before the treatment system (INF), between the two treatment units (MID), and after the treatment system (EFF).

While the test results from after the treatment system show no PFOA or PFOS concentrations detected above the Health Advisory, continued use of the bottled water being provided by the Navy is recommended until additional data can be collected to determine if the drinking water treatment systems offer a long-term solution to treat PFOA and PFOS. Data being collected in this treatability study phase will be used to assist in establishing maintenance schedules should the systems prove to be a viable long-term solution. The Navy will continue to provide your drinking water sample results as data are collected.

Results of Laboratory Analytical Tests for PFAS with EPA Health Advisory Levels

Chemical Name	INF Result (ppt)	MID Result (ppt)	EFF Result (ppt)	Health Advisory (ppt)
Perfluorooctane Sulfonate (PFOS)				70
Perfluorooctanoic acid (PFOA)				70
PFOS and PFOA (cumulative)				70

ND = Not Detected
