NAS Naval Air Station

PFAS per- and polyfluoroalkyl substances

Objectives of Site Inspection

- The objective of the on-base Site Inspection at NAS Whiting Field (beginning 2021) is to confirm if there was a release of PFAS to soil and/or groundwater and develop the conceptual site model by:
 - Collecting on-base soil and groundwater samples and test for PFAS.
 - Evaluating site conditions that influence how PFAS, if present, move in the environment.
- Partnering with a multi-agency team will include:
 - Evaluating site data and information.
 - Planning additional investigation to fill any data gaps.
 - Identifying potential removal actions.
 - Developing path forward and continuing public outreach.

Example Conceptual Site Model
