

OFF-BASE PRIVATE DRINKING WATER WELL SAMPLING FOR PFAS NEAR REMOTE TRAINING SITE WARNER SPRINGS

The Navy is conducting private drinking water well sampling near Survival, Evasion, Resistance, and Escape (SERE) Camp on Remote Training Site (RTS) Warner Springs starting in **January 2026**. The sampling is for certain per- and polyfluoroalkyl substances (PFAS), which are present in the groundwater on base at RTS Warner Springs and may be present in nearby private drinking water wells located in the direction that groundwater flows away from the base. Our records indicate your property uses drinking water provided by Warner Springs Estates, the Navy does not need to sample your drinking water.

The Navy is hosting an open house public meeting about these activities near RTS Warner Springs. The meeting will have information displays, along with representatives from the Navy and its partnering agencies to answer any questions.

**Monday, January 12, 2026
5-7 PM**

**CAL FIRE Station #52
31049 CA-79, Warner Springs, CA 92086**

The Navy is committed to keeping the public informed about its private drinking water well sampling.
