

Enhanced Use Lease
South Depot Annex Site
Naval Support Activity, Norfolk

Additional Q&A – 10/19/09

1. Q. Is there an available soil study of the SDA sites?

A. No. As stated in Section 4.3.1 of the Environmental Condition of Property Report, “No site-specific soils data was identified during the conduct of this ECP. It is likely that shallow soils at the Site include fill material, given the original land surface was occupied by a tidal creek. Shallow soils for the vicinity consist of two series of fine-grained sand and silt layers and relatively thin (less than 5 feet thick) discontinuous clayey horizons (ABB 1997).”
