Naval Air Station Pensacola

Do you have any information about the historical use or disposal of radiological material at Naval Air Station (NAS) Pensacola?

The U.S. Navy is conducting an assessment regarding the historical use and disposal of general radioactive materials (G-RAM) at NAS Pensacola and its outlying properties (e.g., Corry Station, NAS Saufley, and Bronson Field). One known source of G-RAM was the use and refurbishment of radium dials and gauges associated with aircraft maintenance activities beginning in the 1940s. Examples of other G-RAM include radioluminescent personnel markers, deck markers, electron tubes, thoriated welding rods, certain types of engine exciters, thorium lenses, radioisotopes, and depleted uranium counterweights. If you have any information about the historical use or disposal of radiological material at NAS Pensacola or one of its outlying properties, the Navy would appreciate your input and recollections. If you would like to participate in an interview and/or wish to provide your recollections, please dial 844-236-0389 or email HRA_PensacolaNAS@aecom.com and provide your contact information. All information provided will be considered in preparation of an assessment report for NAS Pensacola. All comments, including personal information provided, are subject to the Freedom of Information Act and may be made publicly available at any time.
