MEMORANDUM

FOR THE MEMBERS OF THE TECHNICAL REVIEW COMMITTEE (TRC) FOR THE INSTALLATION RESTORATION PROGRAM AT NAVAL WEAPONS INDUSTRIAL RESERVE PLANT (NWIRP) CALVERTON, NEW YORK

Enclosed are replacement pages which are to be inserted into the Navy's Final Field Sampling Workplan for the Phase II RCRA Facility Investigation (RFI) Report which was previously forwarded on January 29, 1997.

Table 1 has been revised to better explain that the primary use of the permanent monitoring wells at the golf course is to determine groundwater flow directions. Table 1 will also explain that no additional permanent wells are planned at this time near the ECM Area (Site 9) as there are currently enough permanent wells, both onsite and offsite, to determine groundwater flow directions for that area.

Finally, page 5 of Table 1, Table 2, and Table 7 have all been revised to show that samples will be taken from existing monitoring wells at Site 9 and analyzed for the presence of cadmium. Although the Navy had planned for this to be part of the Phase II RFI fieldwork, it was inadvertently omitted from the workplan. This oversight was brought to the Navy's attention during EPA Region II's review of the final workplan.

The Navy is currently planning to initiate fieldwork in accordance with the final workplan during the last week of March 1997. Fieldwork activities are projected to last through May 1997.

If you have any additional questions regarding the Navy's Final Workplan for the Phase II RFI effort, please give me a call at (610) 595-0567, extension 163.

Sincerely,

JAMES L. COLTER
Remedial Project Manager
by direction of the
Commanding Officer
