(c) CNO ltr 451/397464 of 3 Aug 81 (NOTAL)

Encl: (1) Initial Assessment Study of the Marine Corps Base Camp Lejeune,
NEESA 13-011, April 1983

1. The Navy Assessment and Control of Installation Pollutants (NACIP) program was authorized by references (a) and (b). This program provides for the identification, assessment, and control of environmental contamination from past storage, use and disposal of chemicals and hazardous materials at Navy and Marine Corps activities. Under NACIP, the Naval Energy and Environmental Support Activity (NEESA) conducts an Initial Assessment Study (IAS) at an activity to ascertain the potential for environmental contamination. The study is coordinated with the cognizant Naval Facilities Engineering Command Engineering Field Division (EFD). If sites posing a potential threat to human health or the environment are found to exist at an activity, a confirmation study and, if required, projects for corrective measures are initiated by the EFD. An IAS for the Marine Corps Base, Camp Lejeune, North Carolina was approved by the Chief of Naval Operations in reference (c).

2. Enclosure (1) is the final IAS report for the Marine Corps Base, Camp Lejeune and was prepared for NEESA by Water and Air Research, Inc. of Gainesville, Florida. Twenty-two sites were recommended for confirmation study, Phase II of the NACIP program. The confirmation study consists of detailed physical and analytical monitoring to confirm or deny the presence of any contamination or health hazards, and to quantify the extent of any problems that may exist.

3. The Atlantic Division of the Naval Facilities Engineering Command (LANTNAVFACENCOM), will coordinate all further actions of the NACIP program. LANTNAVFACENCOM will assist the activity to initiate the confirmation study using pollution abatement funds. Point of contact is LANTNAVFACENCOM 114, AUTOVON 690-9566, FTS 954-9566, or (804) 444-9566.
