SUBJ: Record of Decision  
Operable Unit 19, Site 84  
MCB Camp Lejeune NPL Site  
Jacksonville, North Carolina

Dear Sir:

The U.S. Environmental Protection Agency (EPA) Region 4 has reviewed the above subject decision document and concurs with the selected remedy for Site 84. This remedy is supported by the previously completed Remedial Investigation, Feasibility Study and Baseline Risk Assessment Reports.

The selected remedial alternative includes accepting the previous Polychlorinated Biphenyl (PCB) soil removal actions and Land Use Controls that will limit exposure to PCB contaminated soils. The three previous non time critical removal actions removed approximately 1,199 tons of PCB waste soil, 16,460 tons of PCB contaminated soil and included the installation of a soil cover over areas where contaminated soils remain in place. This remedial action is protective of human health and the environment, complies with Federal and State requirements that are legally applicable or relevant and appropriate to the remedial action and is cost effective.

EPA appreciates the coordination efforts of MCB Camp Lejeune and the level of effort that was put forth in the documents leading to this decision. EPA looks forward to continuing the exemplary working relationship with MCB Camp Lejeune and Atlantic Division Naval Facilities Engineering Command as we move toward a final cleanup of the NPL site. If you have any questions, please contact Gena Townsend of my staff at (404) 562-8538.

Sincerely,

A handwritten signature in black ink, appearing to read "Franklin E. Hill".

Franklin E. Hill, Director  
Superfund Division
