RE: NC Superfund Section Comments
Draft Final Resubmittal of Work Plan for Site 85
MCB Camp Lejeune

Dear Ms. Montegross:

We reviewed this document and submit the following comment:

There is a typographical error in Remedial Action Objectives Table for Soil. This error is copied from Table 1 of the EE/CA prepared by Baker. The remediation level for antimony is 6.2 ppm based on the residential exposure level (0.2 times the Region III level). The remediation level for arsenic should be 2.0 ppm based on 2 times the base background level. (The Region III residential screening level for arsenic is 0.43 ppm, well below the base background.)

We appreciate the opportunity to review this document. Please call me at (919) 733-2801, extension 278 if you have any questions.

Sincerely,

David J. Lown, LG, PE
Geological Engineer
Superfund Section

cc: Gena Townsend, US EPA Region IV
Neal Paul, MCB Camp Lejeune
