Intrusive Investigation at the 202K MILCON Areas
UXO- 08 former Cantonment Area Bazooka Range

Dear Mr. Beck:

The Environmental Protection Agency (EPA) has completed its review of the above subject document, dated April 2010. It is stated in the document that one sample will be taken directly below the location of an item and/or in the middle of the resulting crater if an item is blown-in-place (BIP). One sample is not sufficient to identify if surrounding soils have been impacted from BIP. Soil samples should also be collected along the spray pattern of the explosion to ascertain if there is any additional impact as a result of the BIP activities.

Also, please add a signature page to the QAPP that includes the appropriate personnel signatures. The crosswalk table identifies the "Title and Approval Page" as "QAPP Page i" however, a signature/approval page is not included.

Once the above items have been corrected, the document can be finalized. If there are any questions, I can be reached at (404) 562-8538.

Sincerely,
Gena
Townsend
