Subject: HRC Treatability Study

George Lane,

The Underground Injection Control Group (UIC) of the Groundwater Section has reviewed the Final Treatability Study Work Plan for Operable Unit 1, Site 47 Marine Corps Air Station Cherry Point North Carolina and Application for a Permit to Construct and/or Use a Well(s) for Injection, dated March, 2001 and August 23, 2001, respectively.

The Work Plan and unsigned UIC application meet all state regulatory requirements (15A NCAC 2C.0200) to construct and operate injection wells for the purpose of injecting an HRC slurry to enhance reductive dehalogenation of the dissolved groundwater contamination at this site. At this time the Groundwater Section/UIC Program has no further comments or suggestions and gives its approval to commence this Final

Treatability Study Work Plan. The Groundwater Section wishes CH2MHill success in it's Study and appreciates the professionalism in its response to the Groundwater Section's concerns.

If you have any questions regarding this letter or the state injection well rules please contact me at (919) 715-6166 or Evan Kane at (919) 715-6165.

Sincerely,

Mark Pritzl
UIC Program
