EXECUTIVE SUMMARY

Interim Measures (IM) were performed at the Solid Waste Management Unit (SWMU) 16 - Cast High Explosives Fill/Building 146 Incinerator (site) at the Naval Support Activity (NSA) Crane in Crane, Indiana during December 2013 through February 2014. This IM Report (IMR) for SWMU 16 was prepared for the United States Department of the Navy (Navy), Naval Facilities Engineering Command (NAVFAC) Midwest by Tetra Tech, Inc. (Tetra Tech) under Contract Task Order (CTO) F276 of the Comprehensive Long-Term Environmental Action Navy (CLEAN) IV Contract Number N62470-08-D-1001.

SWMU 16, which is approximately 16 acres in size, is located in the north-central portion of NSA Crane (see Figure 1-1). Buildings and gravel parking lots cover most of the northern portion of SWMU 16 in the vicinity of Building 146; and mostly grassy and wooded areas are located south, west, and east of Building 146 (see Figure 1-2). Currently, Building 146 is intermittently used for the renovation, rework, and breakdown of munitions; and ammunition demilitarization operations.

Building 146 was constructed in 1943 as an explosives fill and pressure washout facility, which included a trichloroethene (TCE) degreaser that discharged to settling tanks located outside of Building 146. Prior to 1978, outfalls from the settling tanks (which were located north, east, and west of Building 146). The east and west sumps discharged to swales that ultimately discharged to Boggs Creek via Turkey Creek. The north sump was designed and installed with a connection to the sanitary sewer. In 1998, it was found that discharges of floor drains located near the degreaser were routed through terra cotta pipe to the east and west settling basins. The degreaser has been removed, and the drain lines from Building 146 have been plugged.

SWMU 16 is also the former location of three oil-fired, rotary kiln incinerators and their associated aboveground No. 2 fuel oil tanks on the south end of Building 146. Beginning in the 1960s, the kilns were used to demilitarize munitions through burning or detonation, and to thermally destroy the explosives materials contained in small munitions items and components. Ashes from the incinerator were stored in piles on the ground located near the incinerators. The incinerators were removed and underwent Resource Conservation and Recovery Act (RCRA) closure in the early 1990s, and the waste ash piles were removed along with some visibly contaminated soil.

Tetra Tech began a RCRA Facility Investigation (RFI) of in 2003 to assess the site conditions at SWMU 16. The RFI included three rounds of surface soil, subsurface soil, sediment, and groundwater sampling from February 2003 through January 2004. The risk assessments identified unacceptable ecological risks in soils from metals and in groundwater from chlorinated solvents (TCE).

The Navy determined that IM actions would be conducted to mitigate ecological risks and to remediate soils, outside of the B-146 footprint, containing TCE, to eliminate this source of TCE releases to groundwater. Based on the supplemental soil data collected during 2011 and 2012, the Navy directed Tetra Tech to develop a plan to remove the soil from these areas: areas contaminated with TCE from the former degreaser operations area outside Building 146 where floor drain leaks, and pipeline leaks to the settling tanks occurred; and from three soil areas with limited metals (copper, lead, antimony and zinc) contamination where the former incinerator ash piles had been located. An Interim Measures Work Plan (IMWP) was prepared that presented a plan to excavate and remove the subject soil from specific areas around Building 146, and dispose of it off-site. The SWMU 16 IMWP was approved by USEPA Region V. The contaminated soils to be removed from SWMU 16 were identified as source area soils containing TCE or metals concentrations that exceeded the Media Cleanup Standards (MCS) as identified in the IMWP (Tetra Tech, August 2013b).

The Navy selected an Environmental Multiple Award Contract (EMAC) contractor, Lee and Ryan, Inc. (L&R), to remove the soil. L&R excavated and disposed off-site, approximately 8,340 tons of contaminated soil. Approximately 8,204 tons of nonhazardous (Subtitle D) contaminated soil was excavated and transported the Rumpke Landfill in Medora, Indiana for disposal. Approximately 137 tons of hazardous (Subtitle C) contaminated soil (classified as hazardous because of high TCE concentrations) was excavated and transported to the Heritage Environmental Services Landfill in Roachdale, Indiana for disposal. The SWMU 16 excavations were backfilled with 7,920 tons of gravel, and site excavations were restored with topsoil, grass seed, or asphalt pavement, as necessary, to match the pre-removal action site conditions. This IMR describes the soil excavation, removal, transportation, disposal, and site restoration (backfilling and regrading) activities performed at the SWMU 16 site during the IM.

Removal of SWMU 16 contaminated soil containing TCE or metals concentrations above MCS levels has mitigated ecological risk and eliminated all soil sources of TCE releases to groundwater outside of B-146. The SWMU 16 interim measures also included; removal and disposal of an UST; abandonment of a shallow monitoring well; and demolition and disposal of three settling tanks.

No further action (NFA) is recommended for all soils outside of B-146. Ecological risks have been fully mitigated. TCE-contaminated soil serving as sources of TCE in groundwater have been removed. TCE-contaminated soils underlying the B-146 floor have not been remediated. Two vapor intrusion studies have been conducted as part of the RFI process and did not identify any significant risks from vapor intrusion. Remaining SWMU 16 TCE-contaminated soils underlying B-146 will be identified in the Land

Use Control (LUC) Plan. When B-146 is no longer needed, it will be demolished, and the TCE-contaminated soils formerly under the building foundation will be addressed.

1.0 INTRODUCTION

This Interim Measures Report (IMR) summarizes the Interim Measures (IM) activities performed at the Solid Waste Management Unit (SWMU) 16 - Cast High Explosives Fill/Building 146 Incinerator at the Naval Support Activity (NSA) Crane in Crane, Indiana in December 2013 through February 2014. The IMR was prepared for the United States Department of Navy (Navy), Naval Facilities Engineering Command (NAVFAC), Midwest by Tetra Tech, Inc. (Tetra Tech) under Contract Task Order (CTO) F276 of the Comprehensive Long-term Environmental Action Navy (CLEAN) Contract No. N62470-08-D-1001.

1.1 PURPOSE

The purpose of this IMR is to describe and document the IM activities performed at SWMU 16. The IM activities for SWMU 16 included: excavation and off-site disposal of accessible contaminated soils; removal and disposal of an underground storage tank; excavation and disposal of three concrete settling tanks located around and adjacent to Building 146 (in the northern portion of SWMU 16); and formal abandonment/removal of a groundwater monitoring well, located within an area of TCE-contaminated soil, from the ground surface to the top of bedrock.

1.2 SITE DESCRIPTION AND HISTORY

SWMU 16 is located in the north-central portion of NSA Crane, and includes approximately 16 acres of grassed areas and wooded hillsides in the vicinity of Building 146 and its adjacent gravel parking lots (Figures 1-1 and 1-2). Buildings and gravel parking lots cover most of the northern portion of SWMU 16 in the vicinity of Building 146; and mostly grassy and wooded areas are located south, west, and east of Building 146. The Building 146 area within SWMU 16 is generally flat along the crest of a minor ridge top. The ground surface slopes down to the east, west, and south, away from Building 146. The northern portion of SWMU 16 in the industrial area around Building 146 is secured by chain-link fencing, and is only accessible through three gates: one on the north fence; one on the south fence; and one to the northwest, along the railroad track that stops adjacent to the loading dock on the western side of Building 146.

The Building 146 structure was constructed in 1943, and was used primarily for Cast High Explosives Fill operations through the mid-1950s. The cast loading operation involved melt pouring of these explosives into projectiles: 2,4,6-trinitrotoluene (TNT); hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX); and high blast explosive (HBX). HBX is a family of binary explosives that are composed of RDX, TNT, powdered aluminum, and D-2 wax with calcium chloride. Steam-out of United States Department of the Army

(Army) ammunition and rockets containing TNT and Composition B (RDX, TNT, and wax) was also reportedly conducted in Building 146 between 1954 and 1956. Explosives were washed out of containers (such as bomb casings) with water, and the washout materials were directed to settling tanks. The explosives fill and pressure washout facility included a trichloroethene (TCE) degreaser. Currently, the Building 146 structure is intermittently used for the renovation, rework, and breakdown of munitions; and for ammunition demilitarization operations.

Prior to 1978, wastewater was discharged through a storm drain into a ditch and into the local surface water. Additionally, until the mid-1990s, floor drains and building downspouts discharged into the settling tanks located on the eastern and western sides of Building 146; outfalls from these settling tanks also drained into ditches in the woods that ultimately discharged to Boggs Creek via Turkey Creek. The piping associated with these settling tanks was made of clay (terra cotta) tile. Data collected during various investigations showed that wastewater was released from the clay tile pipe from the drains to the settling tanks. In 1974, the north settling tank was installed. The north settling tank received hot well waters, and discharged to the sanitary sewer system.

After 1978, the SWMU 16 wastewater was transported to the NSA Crane Rockeye Treatment Facility for treatment. In 1997, the SWMU 16 pipelines sewer lines that formerly discharged to the settling tanks were rerouted to the NSA Crane sanitary sewer system. The Building 146 downspouts were rerouted to drainage ditches in 1997. In 1998, discharges from floor drains located near the degreaser were found to be routed through terra cotta pipe to the west settling tank. The TCE degreaser was removed from Building 146, and the degreaser area floor drain lines leading from Building 146 were plugged to prevent fluid flow through the pipes to the settling tanks.

SWMU 16 is also the former location of three oil-fired, rotary kiln incinerators and their associated aboveground No. 2 fuel oil tanks which were housed at the south end of Building 146. Beginning in the 1960s, the kilns were used to demilitarize munitions through burning or detonation, and to thermally destroy the explosives materials contained in small munitions items and components. These operations included demilitarization and incineration of ammunition (small caliber ammunition, shotgun shells, fuses, detonators, boosters, tracers, flare candles, and smoke flares). Munitions placed in the kilns were exposed to flame combustion, which resulted in the destruction of the energetics (explosives, propellants, pyrotechnics) contained within the munitions. Initially, ash and slag residues from the incinerator were stored in piles on the ground located directly south of the incinerators and Building 146. Later, ash and other incineration residues were collected and transferred to the NSA Crane hazardous waste storage facility prior to off-site disposal. The incinerators were removed and underwent Resource Conservation and Recovery Act (RCRA) closure in the early 1990s. The aboveground No. 2 fuel oil storage tanks on

the south end of Building 146, and the ash pile remnants and visibly contaminated soils were subsequently removed from the site under a Voluntary Interim Measure (VIM) in 1995.

1.3 SITE INVESTIGATIONS AND INTERIM MEASURES

Tetra Tech began a RCRA Facility Investigation (RFI) in 2003 to assess the site conditions at SWMU 16. The RFI included three rounds of surface soil, subsurface soil, sediment, and groundwater sampling from February 2003 through January 2004. Using RFI analytical data, Tetra Tech performed ecological and human health risk assessments, and prepared a draft RFI Report. The risk assessments identified unacceptable ecological risks associated with soil areas south of Building 146 which were contaminated with metals. The findings of those environmental sampling events are presented in the SWMU 16 RFI Report (Tetra Tech, 2011).

The results of the sampling performed during the RFI showed that TCE concentrations in soils were within acceptable risk ranges for human health. However TCE concentrations in groundwater were found to present excess risk. Following the RFI and at the direction of the Navy, Tetra Tech planned and performed a long-term groundwater and surface water monitoring program to determine whether TCE and RDX were naturally degrading at SWMU 16. Six additional rounds of sampling (Rounds 4 to 9) were conducted between February 2005 and April 2007 in accordance with a USEPA-approved Work Plan (Tetra Tech, 2004). The nine rounds of groundwater monitoring data and supplemental surface water data from that same period were summarized in a report by Tetra Tech (Tetra Tech, 2010) to provide an evaluation of the natural attenuation processes that are reducing the mass, toxicity, mobility, volume, and/or concentration of contaminants in the groundwater at SWMU 16. The results showed that TCE present in subsurface soils, while not presenting any direct human health risk, was servings as a source for TCE contamination of groundwater.

The RFI also concluded that ecological risk was unacceptable in areas impacted by metals from the incinerator ash storage piles.

The Navy determined that IM soil removal actions would be conducted to remove TCE-contaminated soils outside of B-146, that were serving as sources of TCE in groundwater and metal-contaminated soils that were presenting ecological risk. Based on supplemental soil data collected during 2011 and 2012, the Navy directed Tetra Tech to develop a plan to remove the soil from these areas (as shown on Figure 1-2): areas contaminated with TCE; and from three areas with limited metals (copper, lead, antimony and zinc) contamination where the former incinerator ash piles had been located (south of Building 146). The contaminated soils to be removed from SWMU 16 had TCE or metals concentrations that exceeded the Media Cleanup Standards (MCS). An Interim Measures Work Plan (IMWP) for SWMU 16 was prepared

by Tetra Tech (Tetra Tech, 2013b) that presented a plan to excavate and remove the accessible contaminated soil from around Building 146, and dispose of it offsite. The IMWP also presented the MCS, and other IM activities to be conducted. The IMWP was reviewed and approved by NAVFAC and USEPA Region V.

NAVFAC selected a Navy Environmental Multiple Award Contract (EMAC) contractor, Lee & Ryan, Inc. (L&R) to perform the IM activities in accordance with the specifications presented in the IMWP for SWMU 16. These IM activities further support a general recommendation of No Further Action (NFA) for the accessible soils at SWMU 16.

1.4 REPORT ORGANIZATION

The remaining sections of this document contain the following information.

Section 2.0 presents a more detailed description of the environmental history of SWMU 16.

Section 3.0 presents a more detailed description of the soil excavation and other IM activities performed at SWMU 16 in December 2013 through February 2014.

Section 4.0 presents the conclusion and recommendation for future work at SWMU 16.

Section 5.0 contains the list of references.

2.0 ENVIRONMENTAL HISTORY

Multiple environmental investigations, removal and demolition projects, and soil excavation projects were performed at the site between 1972 and 2013. Tetra Tech began an RFI of the SWMU 16 site in 2003. This section summarizes the various environmental investigations, remediation efforts, and site-specific reports that formed the basis for planning the IM activities performed at SWMU 16.

2.1 INITIAL ENVIRONMENTAL INVESTIGATIONS

This section provides a summary of investigations and other activities conducted before the RFI.

A water sample from Building 146 collected in 1972 was reported to contain detectable levels of the explosives HMX and RDX (Halliburton NUS, 1992).

In 1979, surface water and sediment samples were collected near the settling tanks, and from Turkey Creek. Surface water samples from the settling tanks (which had historically received Building 146 floor drain discharges) contained detectable concentrations of TNT and RDX; however, HMX was not detected. Sediment samples from the settling tanks contained detectable concentrations of HMX, RDX, and TNT. No measurable concentrations of any explosives were detected in the surface water and sediment samples collected from Turkey Creek (Army, 1980).

In 1982, two incinerator ash pile samples were collected. The sample results indicated that the ash was a RCRA hazardous waste, because the concentrations of barium, cadmium, and lead were greater than the Extraction Procedure (EP) Toxicity limits (Halliburton NUS, 1992).

In July 1983, four groundwater monitoring wells were installed near Building 146. Soil and groundwater samples were collected and analyzed for metals and selected organic compounds. The concentrations of lead and zinc in soil were greater than average United States background soil concentrations (Tetra Tech, 2011). The concentrations of cadmium, chromium, lead, mercury, nickel, and TCE in groundwater were greater than federal primary drinking water standard maximum contaminant levels (MCLs) in effect at that time. TCE was the only organic compound detected in groundwater samples; however, it was not detected in soil samples collected at the same locations.

As part of the closure activities, soil samples were collected from the Building 146 incinerator bays. Between October and December 1989, 133 soil samples were collected from 34 locations at depths ranging from 0 to 2 feet below ground surface (bgs). These samples were analyzed for metals and

polychlorinated biphenyls (PCBs). Crane sitewide soil background concentrations were not available for comparison at this time; therefore, in March 1990, 16 soil samples were collected from four locations to represent background conditions. PCBs were not detected in the 1989 soil samples; however, the concentrations of arsenic, cadmium, chromium, selenium, and silver in these soil samples were greater than 1990 background concentrations.

Voluntary Interim Measures

The incinerators at Building 146 were removed and underwent RCRA closure in the early 1990s. In 1995, a VIM was conducted at SWMU 16. It was discovered during the VIM that TCE was entering the east and west settling tanks through inlet piping. The VIM objectives were to:

- Sample sludge materials contaminated with explosives, lead, and TCE in the east and west settling tanks.
- Remove and dispose contaminated sludges recovered from the settling tanks.
- Clean settling tanks using a high-pressure low-volume wash system.
- Sample settling tank decontamination fluid to verify that contaminants were successfully removed.
- Remove three aboveground diesel fuel storage tanks and associated diesel-contaminated soils.
- Excavate and remove the slag/ash piles.
- Sample the remaining soils and remove the remaining contaminated soils from the locations of the former ash piles.
- Collect soil removal confirmation samples.
- Backfill and restore the excavated areas.

Between 1996 and 1998, a second VIM was conducted at SWMU 16. The objectives of the second VIM were to:

- Sample and treat TCE-contaminated water that had collected in the east and west settling tanks.

- Repair broken sewer pipes.

- Reroute Building 146 roof drains to eliminate roof drain flow into the settling tanks and drainage ditches.

- Grout and abandon building floor drains.

- Install settling tank pumps and new piping from the settling tanks to the NSA Crane sanitary sewer system.

- Conduct additional soil sampling.

- Remove PCB-contaminated soil.

During the initial VIM, the settling tanks were thoroughly cleaned using a high-pressure, low-volume wash system. The decontamination fluid was sampled for verification of the cleanliness of the sump walls and floor. Prior to the cleaning, sludge residues were removed from the settling tanks and disposed.

2.2 RCRA FACILITY INVESTIGATION

Three rounds of sampling were conducted from February 2003 through January 2004 as part of the RFI. Detailed information is provided in the RFI Report (Tetra Tech, 2011). The soils, groundwater, surface water, and sediment data collected during the RFI were adequate to support the development of baseline human health and screening level ecological risk assessments for SWMU 16.

As presented in the Technical Memorandum, Ecological Media Cleanup Goals document (Tetra Tech, 2013a), site-specific media cleanup goals (MCGs were developed based on risks to plants and invertebrates for antimony and copper; and based on risks to plants, soil invertebrates, and invertivorous birds for lead and zinc. The MCGs were developed using the results of earthworm and plant toxicity tests, and earthworm bioaccumulation tests that were conducted using site soil. The following briefly presents the development of each MCG.

- Soil Invertebrates: The MCGs for soil invertebrates were based on the results of a 28-day earthworm toxicity test, where survival and growth of the earthworms were the endpoints. None of the site

samples had lower survival or growth of earthworms compared to the reference samples; therefore, the maximum detected concentrations of the metals in the samples tested were considered the No Observed Effects Concentration (NOEC). The NOECs are used as the MCGs for soil invertebrates for copper [253 milligrams per kilogram (mg/kg)], and zinc (1,950 mg/kg). Because the USEPA Ecological Soil Screening Levels (Eco SSLs) (USEPA, 2005a and 2005b) for soil invertebrates for antimony (78 mg/kg) and lead (1,700 mg/kg) were greater than the NOECs, the Eco SSLs are the MCGs for those metals (Tetra Tech, 2013a).

- Plants: The MCGs for plants were based on the results of 28-day toxicity tests with Red clover and ryegrass. The endpoints of the tests were germination, survival, and growth. There were some impacts to plants in the site samples; however, it appeared the soil pH was a confounding factor in the tests. Nevertheless, NOECs and Lowest Observed Effects Concentrations (LOECs) were developed for antimony, lead, and zinc. The geometric means between the NOECs and LOECs were used as the MCGs for antimony (6.3 mg/kg), lead (652 mg/kg), and zinc (1,950 mg/kg). A LOEC could not be developed for copper because the maximum concentration was in a non-toxic sample; therefore, the MCG for copper was based on the NOEC.

- Invertivorous Birds: The MCGs for invertivorous birds were developed by first conducting an earthworm bioaccumulation test using site soils, and then using the site-specific bioaccumulation factors (BAFs) to calculate the MCGs. There were calculated values of the MCGs developed for invertivorous birds for lead and zinc; MCGs were not calculated for antimony or copper because these metals did not pose potential risks to invertivorous birds in the ecological risk assessment for SWMU 16 (Tetra Tech, 2011). The MCG selected for lead is lower than the value presented in the original ecological risk assessment because USEPA suggested that the Navy use a lowest observed adverse effects level (LOAEL) for lead on another site at NSA Crane. This revised LOAEL then resulted in the lower MCG (163 mg/kg). Note that because birds roam across the site, USEPA agreed that the MCGs for invertivorous birds can be applied as an average concentration across the site.

The MCGs were then used as the MCG for SWMU 16 with one exception: for antimony, the plant MCG of 6.3 mg/kg was lower than the base-wide background concentration of 6.9 mg/kg. Therefore, 6.9 mg/kg was used as the MCG for antimony.

The MCG for lead at any given sample point is 652 mg/kg to be protective of plants; whereas, 163 mg/kg is the average MCG lead concentration that has to be met to be protective of birds across the site.

2.2.1 Soil

TCE contamination is greatest beneath Building 146, and extends primarily to the west from the building. The source of TCE is suspected to be the settling tanks and their associated piping. The operations that caused the release of TCE are not known; however, drain lines were located in the vicinity of a TCE degreaser. The TCE degradation product cis-1,2-dichloroethene was also detected. The detections of polynuclear aromatic hydrocarbons (PAHs) greater than screening levels were limited to the area east of the northern portion of Building 146. Metals contamination is greatest in surface soil south of Building 146, and is most likely associated with past incinerator operations. The primary contaminants that appear to be site-related are antimony, copper, lead, and zinc (which are used in shell casings and bullets), although other metals (chromium and iron) may be minor contaminants. The detected concentrations of several metals that were identified as chemicals of potential concern (COPCs) are representative of background conditions. These are: aluminum, arsenic, barium, cadmium, cobalt, manganese, nickel, and vanadium.

2.2.2 Groundwater

Groundwater in shallow and mid-level bedrock wells contained concentrations of volatile organic compounds (VOCs) that were greater than human health screening levels. Minimal VOC contamination was detected in the deeper bedrock wells and the valley deposit aquifers. TCE concentrations were higher than those of any other VOCs. Degradation products of chlorinated VOCs were also detected. The highest concentrations of TCE and other VOCs were detected in samples collected from wells on the ridge top near the northern end of Building 146; TCE concentrations decreased in downgradient directions toward the valleys below. The greatest TCE concentrations were detected near the settling tanks.

RDX was the most widely detected explosive compound in the shallow and mid-level bedrock wells. RDX was not detected in the deeper bedrock wells or the valley deposit aquifers. The RDX concentrations were greatest at the top of the ridge within the SWMU 16 operational area. From there, the concentrations decreased in downgradient directions away from the top of the ridge and down the hillsides. RDX degradation products were also detected.

Potential site-related metals detected in the shallow and mid-level bedrock wells were: aluminum, arsenic, chromium, iron, lead, nickel, and vanadium. The greatest concentrations of aluminum were detected in the northern portion of the site. The greatest concentrations of arsenic were detected east of Building 146, with apparently random spatial patterns. Chromium contamination does not appear to be significant, and it is not clear whether this metal is a site-related contaminant. The greatest

concentrations of iron were consistently measured in wells located southwest and east of Building 146, and it is not clear whether iron is a site-related contaminant. The greatest concentrations of lead were detected in a well located east of Building 146. The greatest concentrations of nickel were also detected in a well located east of Building 146. It is not clear, however, that the elevated nickel concentrations are associated with Building 146 or other site operations, because the spatial patterns appear to be random. The greatest concentrations of vanadium were detected in a well located east of Building 146. Most other detections were less than the human health screening value. The detections of aluminum, arsenic, chromium, iron, lead, and vanadium were greatest in unfiltered samples. Lesser concentrations were detected in filtered samples, and the detections of these metals may be associated with suspended matter in the groundwater. The metals detected in groundwater may be related to natural conditions.

2.2.3 Surface Water and Sediment

The detections of TCE greater than human health screening levels were associated with samples collected from drainage ditches east of Building 146. TCE was not detected in sediment.

Minimal explosives contamination was detected in surface water and sediment in the eastern portion of the site. Explosives were not detected in the farthest downgradient sample locations. There were no detections of explosives to the west and south of SWMU 16. The greatest concentrations of explosives were observed in samples collected from the settling tank located north of Building 146.

The concentrations of these metals in surface water and/or sediment were greater than surface water or sediment screening values at numerous locations: aluminum, antimony, arsenic, cadmium, chromium, copper, iron, lead, nickel, vanadium, and zinc (Tetra Tech, 2011).

2.3 POST- RFI INVESTIGATIONS

2.3.1 Long-term Groundwater/Surface Water Monitoring and Natural Attenuation Assessment

The results of the sampling performed during the RFI showed that TCE concentrations were above human health screening values for surface and subsurface soil west of Building 146. The TCE contamination was not fully bounded along the westernmost margin; consequently, the USEPA Region V requested that the Navy conduct further evaluations to delineate TCE contamination of soils, and to determine the potential for accumulated DNAPL in bedrock. Following the RFI and at the direction of the Navy, Tetra Tech planned and performed a long-term groundwater and surface water monitoring program to determine whether TCE and RDX were naturally degrading at SWMU 16. Six additional rounds of sampling (Rounds 4 to 9) were conducted between February 2005 and April 2007 in accordance with a

USEPA-approved Work Plan (Tetra Tech, 2004). The nine rounds of groundwater monitoring data and supplemental surface water data from that same period were summarized in a report by Tetra Tech (Tetra Tech, 2010) to provide an evaluation of the natural attenuation processes that are reducing the mass, toxicity, mobility, volume, and/or concentration of contaminants in the groundwater at SWMU 16. The evaluation showed that natural attenuation processes are occurring as demonstrated by the presence of TCE and RDX degradation products. TCE contamination in source area wells was found to be increasing indicating a source of continuing releases. TCE concentrations in most downgradient plume wells showed a trend of decreasing concentration. It was concluded that monitored natural attenuation is a viable option for groundwater. However, a soil source removal was recommended to address an increasing trend noted for RDX and TCE concentrations in two of three source area wells.

2.3.2 SWMU 16 Soil Contamination Delineation Sampling

Based on the findings in the RFI, the Navy determined that an interim measures action would be conducted to reduce the human health and ecological risks associated with the TCE Contamination Area and the Metals Contamination Area. Efficient implementation of the IM required a more precise delineation of the extent of soils contamination in each area. In addition, after the RFI field activities were completed, an underground storage tank (UST) was discovered in an area northeast of Building 146.

Two rounds of soil delineation sampling were conducted at these three areas of SWMU 16 to complete the surface and subsurface soil delineation: the TCE Contamination Area (beneath Building 146 and extending primarily to the west from the building); the Metals Contamination Area (south of Building 146 near where the incinerator ash piles had been located); and the UST Area (about 110 feet north of Building 146). Round 1 sampling was performed in August 2011, and the subsequent Round 2 sampling was completed during October and November 2012. Based on the evaluation of the soil data for the UST Area, no soil removal action was required; however, the UST structure was identified for removal. In a similar fashion, the concrete settling tanks to the west, north, and east of Building 146 were also identified for removal to occur during the IM.

2.3.2.1 SWMU 16 TCE Contamination Area Soil Delineation Summary

TCE was the only VOC that was detected at concentrations above the MCG in both rounds of delineation sampling. Several surface soil samples had TCE concentrations that exceeded MCG, mainly in the southern extent of sampling. Similarly, TCE was the only constituent which was detected at concentrations above MCG in the subsurface soil samples; these exceedances were observed in the northern, western, and southern investigation areas. The results of the Round 2 soil delineation sampling

fully delineated the extent of TCE soil contamination, both horizontally and vertically (top of bedrock), in the TCE Contamination Area of SWMU 16.

2.3.2.2 SWMU 16 Metals Contamination Area Soil Delineation Summary

The Technical Memorandum Ecological Media Cleanup Goals report for SWMU 16 Surface Soil (Tetra Tech, 2013a) described the development of the MCG; presented the surface soil data for antimony, copper, lead and zinc; and proposed the soil removal areas. Several exceedances of all four metals were observed, with most of the highest exceedances co-located in samples from the eastern and southeastern portions of the area. The results of the Round 2 soil delineation sampling fully delineated the horizontal extent of metals contamination in the surface soil of the Metals Contamination Area of SWMU 16. Three non-contiguous soil areas were delineated south of Building 146, with soil metals contamination extending to a depth of 2 feet bgs.

Sample locations (with contaminant concentrations below the MCG) were used to define the perimeters of the excavation both horizontally and vertically. Therefore, because the limits of excavation were defined by samples with contaminant concentrations below the MCG, no additional confirmation samples were proposed or performed following excavation activities.

2.4 INTERIM MEASURES WORK PLAN

Tetra Tech prepared an IMWP for SWMU 16 (Tetra Tech, 2013b). The IMWP presented a plan to excavate and remove surface and subsurface soil containing TCE and surface soil containing metals at concentrations that exceed the applicable MCGs. The IMWP included specifications to perform IM activities. It was used by the Navy to procure an EMAC contractor and implement the work.

3.0 INTERIM MEASURES

The Navy referenced the IMWP (Tetra Tech, 2013b) in its request for proposals from qualified EMAC contractors. The Navy selected L&R to perform the work. L&R prepared a Work Plan (Lee & Ryan, 2013a) and Quality Control Plan (Lee & Ryan, 2013b) that described how the work would be implemented to achieve the requirements in the IMWP. The Work Plan provided details on the following:

- Planning and Permitting
- Site Preparation and Support Activities
- Soil Excavation
- Transportation and Off-Site Disposal of Soil
- Backfill and Restoration

The Navy approved the L&R Work Plan and Quality Control Plan. L&R began initial project site planning and preparation activities during October through November 2013 to obtain the necessary permits and to address the abatement and removal of materials in the covered walkway structure that contained asbestos and lead-based paint (LBP). It was necessary to remove the walkway in order excavate the TCE-contaminated soils underneath the walkway. Background air sampling was performed on November 15, 2013, prior to the performance of the LBP and asbestos abatement activities. The primary mobilization of L&R field personnel and site equipment to the SWMU 16 job site occurred on December 1, 2013. Erosion and sediment control devices were installed at SWMU 16 beginning December 2, 2013.

A SWMU 16 IM project team meeting was held at NSA Crane on December 2, 2013, prior to the movement of any soil materials to prioritize the sequence of the work elements (including soil and infrastructure removals) at the site and to confirm project team understanding and roles for project communications and task performance coordination. Tree removals were completed for the M-3 soil removal area (south of Building 146) on December 3, 2013 and the first soil loads of soil were loaded and removed from SWMU 16 on December 4, 2013. Infrastructure removals were required all around Building 146 before and during soil excavations so that the remaining TCE contaminated soil outside the footprint of Building 146 could be accessed, excavated, loaded, and disposed offsite (Figure 3-1). During the soil excavations, it was often necessary to remove surface and subsurface site infrastructure from inside the excavation perimeters [i.e., portions of the covered sidewalk, railroad track, parking lot asphalt, three concrete settling basins, an underground storage tank, a groundwater monitoring well (MWT017), two manholes, sections of drainage pipe (to the manholes) and a 100-foot tall lightning arresting pole]. A chronology of the infrastructure removal and replacement activities performed by the EMAC during the

SWMU 16 IM project is summarized in Table 3-1, and presented in more detail in Section 3.4 of this report. Figure 3-1 presents the relevant infrastructure locations for the SWMU 16 IM project.

As described in the following sections, IM work continued with several shutdown periods to account for seasonal holidays and interruptions due to inclement weather through February 2014. As described in Section 3.4 of this report, a series of site restoration activities were completed at SWMU 16 during February through mid-April 2014 to replace essential site infrastructure that had been removed in order to access and excavate the identified soil contamination. Final site restoration actions also included the replacement of asphalt pavement that had been removed and the placement of topsoil, planting of approved grass seed, and straw mulching to aid seed germination and maturation during spring 2014, as described in Section 3.4. The IM project work was monitored by the Navy and Tetra Tech. Photographs of IM activities are presented in Appendix A.

Appendix B presents copies of these EMAC Contractor (L&R) daily reports:

- Contractor Production Reports
- Contractor Quality Control Reports
- Well Abandonment Record for Groundwater Monitoring Well MWT017

Offsite disposal documentation is presented in Appendix C, and contains copies of the signed non-hazardous waste disposal manifests for the 407 truckloads of material that were disposed offsite at the Rumpke Landfill in Medora, Indiana. The soil materials from the High TCE Concentration Area were managed as hazardous waste; therefore, Appendix C also includes copies of the signed hazardous waste disposal manifests for the six truckloads of material that were disposed offsite at the Heritage Environmental Landfill in Roachdale, Indiana. In addition, Appendix C includes the IDEM “contained in” determination for TCE-contaminated soils. Soils with volatile organic concentrations below the IDEM Risk Integrated System of Closure (RISC) direct-contact level met the exit criteria and were managed and disposed as non-hazardous wastes. Only soils centered on soil boring 16SB200 exceeded the IDEM direct-contact criteria and were managed and disposed as hazardous wastes.

The EMAC Analytical Report is presented in Appendix D and presents the pre-excavation Toxicity Characteristic Leaching Procedure (TCLP) analytical testing of the soils prior to their removal from SWMU 16.

Quarried gravel from Sieboldt Quarry in Springville, Indiana (primarily #53 commercial grade and #2 stone) was approved by the Navy for use as common fill to restore the excavated areas. Weight

tickets for the 372 truckloads of gravel and stone brought on-site to backfill the excavations are presented in Appendix E.

3.1 SITE PREPARATION AND SUPPORT ACTIVITIES

After the planning documents were approved and the permits obtained, Tetra Tech utilized the services of an Indiana-licensed land surveyor, Bledsoe, Riggert, & Guerrettaz, Inc., to mark the predetermined excavation nodes. Figure 3-2 shows the excavation nodes. The excavation nodes were marked on October 14, 2013 for the main soil excavations, and the High Concentration TCE Area (a portion of the Southern TCE Area) was resurveyed for improved delineation on December 5, 2013. Lee & Ryan mobilized to the site on December 1, 2013. A field project kickoff and safety review meeting was held at NSA Crane with the Navy Environmental Coordinator, the EMAC contractor field staff and their partners and subcontractors, and Tetra Tech on December 2, 2013. Silt fences, safety fencing, and safety signs were installed at SWMU 16 in accordance with plan specifications on December 3, 2013.

The trees in the main soil metals area (M-3) and the pathway to that location were cleared on Tuesday December 3, 2013.

The limits of excavation were painted on the ground, and ground elevations across the area to be excavated were measured and recorded prior to excavation.

Even though the work site is enclosed by a chain-link fence, security measures including fencing and signs were installed for safety and to notify installation personnel about the performance of the IM activities at SWMU 16. The access gates to the Building 146 area were closed at the end of every work day.

No additional erosion and sedimentation (E&S) controls were determined to be necessary at the site. There was an existing gravel entrance onto the site, and a solid graveled area near the excavation was used to stage the trucks for loading. The trucks that were loaded with soil for transport offsite stayed on stabilized gravel surfaces, and did not drive onto excavated or disturbed areas; therefore, they did not collect soil or mud from the excavation. The trucks were carefully loaded by an excavator that remained in the disturbed excavated area, and there was no visible spillage. At the end of the project, only the excavator and dozer that were in the disturbed area required decontamination; the soil on their tracks and other parts of the equipment were swept back into the excavation. Therefore, a decontamination pad was not necessary and was not installed. Because of dry weather conditions prior to excavation, the soil in the area was very dry and there was very little runoff. The soil was excavated in a manner that contained runoff from the disturbed area; the excavation itself was developed to serve as a precipitation collection

point and kept the collected water from contacting contaminated soil. When necessary, non-contact precipitation water was authorized for discharge to the NSA Crane Sanitary Sewer Treatment System. Large waterproof covers were regularly used to protect excavation faces/floors from collecting snow and rain between work sessions. An underground steam line in the northern TCE Area had a daily measurable condensate leak in the excavation. A dike was constructed to contain the water and keep it separated from the contaminated soil. With the direction of the Environmental Coordinator at NSA Crane, a sump was engineered to collect the steam condensate and pump the collected water to the NSA Crane Sanitary Sewer Treatment System.

3.2 SOIL EXCAVATION

Excavation was performed by an excavator that remained within the disturbed area. Soil that was excavated from the site was either temporarily stockpiled within the excavation area, or loaded directly onto trucks that were staged on stable areas just outside the excavation. The loading process was performed with care, and no visible spillage was observed. Concrete (in pieces that were up to 1 cubic yard in size), pipes, and other concrete debris were encountered during the excavation of the other subsurface infrastructure. The asphalt/concrete in the northern TCE area at SWMU 16 was disposed of on base. The top two feet of soil was clean in the northern TCE area, so the top 1.5 feet of the soil in that area was approved for use as backfill for the excavation. All concrete from the settling basins was broken into chunks and shipped to an offsite landfill for disposal because the material was excavated from contaminated soil areas.

IM soil excavation at SWMU 16 began on Wednesday, December 4, 2013. Metals Area M-1 was excavated first and backfilled on December 4, 2013. Metals Area M-2 was excavated next starting on December 4, 2013, and backfilling was completed on December 5, 2013. The larger Metals Area M-3 was excavated beginning on December 5, 2013, and the backfill material placement was completed on December 10, 2013. The excavations performed in the Metals Areas were to the horizontal limits shown on Figure 3-2.

The three Metals Areas (M-1, M-2, and M-3) were excavated to a minimum depth of 2 feet bgs. The EMAC contractor used surveying techniques to ensure that a minimum of 2 feet of soil was removed from these excavations. The locations of these three soil removal areas are shown on Figure 3-2

The soil excavation in the Northern TCE Area began on December 10, 2013, and continued through December 16, 2013.

Soil excavation for the Southern TCE Area began on December 16, 2013 and continued through December 19, 2013; the excavation activities were suspended at the end of that work day because of a large approaching rain storm and to break for the holidays. Plastic sheeting was placed on the face of the contaminated soil, and clean fill was used to stabilize and hold the sheeting in place. The field team demobilized at the end of the work day.

Soil excavations were resumed in the Southern TCE Area on Thursday January 2, 2014. The weather conditions were freezing, and the backfill materials and the excavated soil being transported to the landfill for disposal were freezing in the dump truck beds. The snowy roads also made truck transport difficult; therefore, the soil remediation and backfill activities were secured that afternoon. An approaching winter weather system with sub-freezing temperatures disrupted the SWMU 16 field activities for more than 1 week. On January 13, 2014, the field activities were resumed, and continued through January 17, 2014. During January 14 and 15, 2014, the High Concentration TCE Area (a portion of the Southern TCE Area) soil was excavated, removed, managed, and transported as hazardous waste. During these same dates, non-hazardous soil was also excavated and removed from the Southern TCE Area. Another winter weather system disrupted the project schedule again on January 17, 2014, and soil excavation activities did not resume until January 30, 2014. The final truckload of soil was removed from the excavation equipment during decontamination procedures on January 31, 2014, and shipped to the landfill for disposal.

3.3 TRANSPORTATION AND OFF-SITE DISPOSAL OF SOIL

Prior to coming onto the site, all trucks were weighed at the Defense Reutilization Marketing Office (DRMO) truck scales to obtain a tare weight. After they were loaded with material from SWMU 16, they were reweighed at the DRMO scales to confirm they were within weight limits before leaving NSA Crane.

A total of 40 truckloads of soil containing approximately 808 tons of metals-contaminated soil was transported under non-hazardous waste manifests by Hanna Trucking Company for offsite disposal in the Rumpke Landfill in Medora, Indiana.

A total of 367 truckloads of soil containing approximately 7,395 tons of TCE-contaminated soil was transported under non-hazardous waste manifests by Hanna Trucking Company for offsite disposal in the Rumpke Landfill in Medora, Indiana.

Quantities of non-hazardous soil that were disposed are summarized in Table 3-2, and copies of the signed non-hazardous waste disposal manifests are presented in Appendix C.

Six truckloads of soil containing approximately 137 tons of TCE-contaminated soil from the High TCE Concentration Area were transported by U.S. Bulk Transport, Inc. under Solid Hazardous Waste manifests to the Heritage Environmental Service LLC Landfill in Roachdale, Indiana. Quantities of hazardous soil that were disposed are summarized in Table 3-3, and copies of the signed hazardous waste disposal manifests are also presented in Appendix C.

Prior to disposal, a representative sample of the material was collected and analyzed; the results of that analysis (included in Appendix D) confirmed that the non-hazardous TCE-contaminated soil and the metals-contaminated soil could be disposed as non-hazardous waste. However, the subsurface soil TCE sample data from a point inside the Southern TCE Area indicated that the soil TCE concentration in boring 16SB200 at a depth of 2 to 4 feet bgs was 37,500 micrograms per kilogram (µg/kg). Consequently, the subsurface soil in this High TCE Concentration Area (from boring 16SB200 extending outward to the nearest surrounding sample points with non-hazardous TCE concentrations) was excavated, loaded, transported, and disposed as hazardous solid waste.

3.4 BACKFILL AND RESTORATION

As shown in Table 3-4, 372 truckloads of gravel and stone were brought onto the site from the Sieboldt Quarry in Springville, Indiana (primarily #53 commercial grade and #2 stone) as common fill to backfill the soil excavation areas from December 4, 2013, through January 30, 2014. Approximately 7,920 tons of gravel and stone materials were brought onto the site and used as common fill. Documentation for the backfill material including copies of the weight tickets are presented in Appendix E.

The SWMU 16 excavations were backfilled with gravel and stone (as common fill) to within about 6 inches of the ground surface. Figure 3-3 shows the support area soil sample locations collected after the completion of soil excavation and backfilling operations. No contamination was detected in the support area soils. The IMWP indicated that site excavations were to be restored with topsoil, grass seed, or asphalt pavement, to match pre-removal action site conditions. The completion of the main backfilling and grading for the Northern TCE Area and the Southern TCE Area on January 30, 2014, permitted the EMAC to begin the replacement of specific infrastructure elements that had to be removed to access and excavate TCE-contaminated soil outside the Building 146 footprint. Despite the cold daily temperatures experienced in early February 2014, the EMAC demolished the existing steps on the north end of the west loading dock at Building 146, constructed wooden forms, and poured the concrete for the new loading dock access steps (Table 3-1). This restoration activity was followed by form construction, placement, bracing, and concrete pouring for the covered walkway foundation in mid-February 2014. The compaction, pouring, and finishing of the concrete walkway (north of Building 146) connecting the Building 146 loading dock steps with the existing covered walkway to the north was completed in late-

February 2014 (Table 3-1). At this same time the grounding rods and connecting grounding line loops were installed in trenches around Building 146, covered with soil, and successfully tested (Figure 3-1).

In early March, the EMAC completed the installation of the steel framing for the covered walkway, installed the steel roof and sidewall panels, connected the electrical lighting systems inside the walkway tunnel and installed the safety railings for the access steps leading to the Building 146 west loading dock. As the covered walkway was nearing completion in mid-March, the section of railroad track that had been removed from the area on the west side of Building 146 (and west of the covered walkway) was installed. The replacement railroad track consisted of new wooden ties and new rock ballast, but used the same rails and connecting hardware (spikes and attaching plates) to the extent possible. The final surfacing, dressing, ballast placement, and grounding wire installation for the Building 146 railroad track spur was completed on March 24, 2014.

The completed installation of the covered walkway and railroad track spur at Building 146 in late March supported the final surface dressing and grading for those areas that still required asphalt placement or the planting of grass seed to promote revegetation. During mid-April 2014 a total of 60 pounds of rye grasses and tall fescue grasses were planted and mulched in the final area (approximately one-half acre) that required revegetation (Area M-3 and a portion of the former Northern TCE Area, north of the installed manhole and west of railroad track) at the direction of the NAVFAC Project Engineer. On April 17, 2014 an area of asphalt paving immediately east of the covered walkway was completed. This paving job required 21.83 tons of #53 stone to achieve final grade, 44.45 tons of asphalt base material (in a four-inch lift), and 23.15 tons of asphalt top coating (in a 2-inch lift).

The site closeout meeting for the SWMU 16 Interim Measure Removal Action was held on the afternoon of April 17, 2014 with representatives from NAVFAC, the Crane Army Ammunition Activity (CAAA), and the EMAC (L&R). The Beneficial Occupancy Date for Building 146 was set for April 17, 2014 and the site restoration activities were accepted as completed at that time (Appendix B).

TABLE 3-1

SITE INFRASTRUCTURE REMOVED OR REMOVED AND REPLACED TO FACILITATE SWMU 16 INTERIM MEASURES SOIL REMOVAL NSA CRANE, INDIANA

Date	Affected SWMU 16 Infrastructure/Feature
November 18-19, 2013	Removal of ACM Panels from Covered Sidewalk
November 19-20, 2013	Removal of LBP from Covered Sidewalk Frame
November 20, 2013	Removal of Railroad Track Section
November 22, 2013	Abandonment of Well MWT017
November 25, 2013	Removal of Steel Frame from Covered Sidewalk
December 9, 2013	Removed Northern Settling Basin
December 9, 2013	Removed Asphalt Area in Northern TCE Area
December 10, 2013	Removed 8-inch Pipeline to N. Settling Basin
December 11, 2013	Removal Northern Manhole and pipeline under walkway
December 11, 2013	Removal of lightning arresting pole
January 13, 2014	Removal of Western Settling Basin
January 14, 2014	Removal of UST and Eastern Settling Basin
January 15, 2014	Northern Manhole Replaced
January 16, 2014	Replaced Western Manhole. Replaced wastewater pipeline (along loading dock)
January 30, 2014	Dug hole for replacement lightning arresting pole and installed new pole
February 3 - 6, 2014	Removal/demolition of old concrete steps to west loading dock - forms for new steps installed
February 13, 2014	Concrete poured into forms for new loading dock steps to covered walkway
February 19 - 20, 2014	Installed pre-fabricated forms for covered sidewalk foundation - concrete poured into forms
February 24, 2014	Trenches for grounding loops dug, grounding rods and lines installed and tested
February 24 - 25, 2014	Walkway floor compacted, concrete poured, finished, and brushed
March 6 - 14, 2014	Installation of covered walkway steel framing, attachment of steel frame to concrete foundation, attachment of steel roof and wall panels to frame, installation of safety railings to concrete steps
March 11 - 24, 2014	New railroad ties installed with attaching plates, old rails, spikes, and new ballast
March 27 - 31, 2014	Excavation and final grading of parking areas and grass seeding areas
April 14, 2014	Placement of 60 pounds of seed for rye grasses and tall fescue grasses and final straw mulching completed for approximately one-half acre of SWMU 16 IM site that required revegetation.
April 17, 2014	Final grading and asphalt placement east of covered walkway. Construction closeout meeting and Usability Complete Inspection performed by NAVFAC and Lee & Ryan representatives

4.0 CONCLUSION

The IM activities described in this report were completed in accordance with the USEPA Region 5 - approved Interim Measures Work Plan (Tetra Tech 2013b). The two objectives of the interim measures were fully achieved. All soils presenting ecological risk from metals were excavated. All soils containing TCE, outside of the B-146 footprint, were removed. Excavations were completed as described in the approved plan (Tetra Tech 2013b). The excavations included removal and offsite disposal of 8,340 tons of surface and subsurface soil from SWMU 16. This offsite soil removal and disposal included 7,395 tons of non-hazardous TCE-contaminated soil, 808 tons of non-hazardous metals-contaminated soil, and 137 tons of hazardous TCE-contaminated soil, as described in Section 3.0 of this report.

NFA is recommended for all soils outside of the B-146 footprint. Ecological risks have been fully mitigated. TCE-contaminated soil serving as sources of TCE in groundwater have been removed.

A brief acknowledgement of the IM activities and the information presented in this IMR will be incorporated into the RFI Report by revising the Executive Summary of the RFI Report; the revised RFI Report will then be submitted to USEPA. The SWMU 16 Corrective Measures Study will address groundwater contamination.

TCE-contaminated soils underlying the B-146 floor have not been remediated. Two vapor intrusion studies have been conducted as part of the RFI process did not identify any significant risks from vapor intrusion. Remaining SWMU 16 TCE-contaminated soils underlying B-146 will be identified in the Land Use Control (LUC) Plan. When B-146 is no longer needed and is demolished, the TCE-contaminated soils will be addressed.

WORK PERFORMED PER SHIFT	
TASKS:	NOTE: Background air monitoring was performed on Thursday, 14NOV13, by Cardno ATC. Results are attached. 0730hrs: L&R, ATC, AllTrack and PTSI crews arrives onsite. Introductions made. 0800hrs: Tim Sears arrives with CAAA, NSA Crane Fire Dept. and Building 146 manager. After introductions, Tim Sears requests CAAA and FD representatives to issue authorization and permit to begin work. Permit will be valid for 30 days (17-DEC-13) and will have to be renewed prior to that date. B-146 manager reviews building emergency protocols, alarm system and safe rally points. L&R and subcontractors perform site orientation and review HASP. AllTrack leaves for the day, since no work on the tracks can be performed until WED 20NOV13 due to B-146 production schedule. ATC begins air monitoring device calibration and setup in tunnel and B-146 work areas per plan. PTSI crew travels offsite to access storage vault at another location to acquire additional setup materials. L&R crew performs site inspections and reviews project plans in detail. 0930hrs: B&D electrician onsite to de-energize tunnel lighting. Terminate service at 5th fixture to be re-installed upon tunnel replacement. 1000hrs: PTSI crews begin zone delineations and exclusion setup. 1100hrs: PTSI crews begin removing transite panel fasteners using manual bolt cutters. Unable to begin removing transite panels due to roll-off dumpster delayed delivery. Delivery delayed due to last night's massive storms which created demand for service in emergency areas. 1300hrs: L&R and PTSI crews secure this site work areas and depart. L&R and ATC continue admin duties in the lunchroom until 1345hrs. ATC also performs air monitoring sample analysis.

WORK PERFORMED PER SHIFT	
TASKS:	0600: PTSI and L&R arrive onsite, perform daily safety meeting and activity plans. 0630: ATC onsite. PTSI crews continue with abatement zone setup. ATC preps air monitors. 0715: ACM dumpster arrives onsite. Placed near work area, but away from B-146 operations. Dumpster is lined w/6mil poly sheeting by PTSI crew. 0835: Josh Harrell (HCI) arrived to help identify where to remove LBP so bolts/welds could be removed. PTSI crews continue with bolt cutting and removal of transite panels. Material is placed in lined rolloff as its generated. 1300: Completion of asbestos abatement. 1330: Start removal of LBP around bolts/welds using grinder/wire wheel tool and HEPA vacuum. Vacuum collection performed during the entire process. 1400: Layne Dobbs (AllTrack) and Tim Sears (NAVFAC) meet with L&R to discuss the rail removal process and where salvage rails will be stored. NAVFAC suggested and approved the re-use of uncontaminated ballast material located south of the TCE excavation boundary limits. Uncontaminated ballast material will be stockpiled by AllTrack and used by L&R as backfill during restoration activities as needed. Remainder of the day PTSI removed steel window frames along with LBP coated steel railing from stairs at the end of tunnel. The scrap steel is placed on wood pallets (provided by Bldg.-146 manager) and will eventually be removed from the site by HCI after tunnel steel relocation. Tim Sears had a question about how the power fed to the lights that were de-energized on Monday. It was explained that B&D Electric secured the panel disconnect and safely terminated the line at the 5th light fixture. It was then re-energized to allow existing undisturbed fixtures to remain operational. 1600: Tunnel frame was taped off with asbestos caution tape. Dumpster liner was pulled up around transite to protect from potential rainfall collection. The dumpster was then topped with additional poly sheeting and labeled with asbestos sticker and asbestos caution tape. Waste hauler was called to schedule pickup later this week. 1630: Site secured. Crew departs for the day.

PHOTO LOG	
DESCRIPTIONS: Transite panel removal operations.	
Transite panel removal completed. Dumpster staged for load out.

WORK PERFORMED PER SHIFT	
TASKS:	0645: PTSI, ATC and L&R crew arrive onsite, perform daily safety meeting and plan morning tasks. 0700: ATC preps for air monitoring. 0720: ATC starts air monitoring in and around tunnel work zones. 0745: AllTrack arrives (Layne Dobbs Supervisor) and L&R conducts orientation/ safety meeting and discusses hot work operations and proper PPE. Completed hot work permit w/ crew. 0815: AllTrack starts work on removal of rail road spikes, rail and plates. Removed track was dragged north into the curve using rubber tired backhoe. 0920: ATC stops air monitoring tests. Josh Schoppenhorst w/PTSI finished LBP removal around bolts to be removed during steel frame relocation. All of the LBP dust was put into a 5 galllon bucket w/lid and will be given to Tim Sears for NSA Crane processing/disposal. Josh Schoppenhorst also cleaned the tunnel frame of birds nests, wasps nest, dirt, etc. that built up between transite and steel over the years. All removed material was swept up and put into asbestos dumpster since asbestos fibers could be present. Level C PPE was used during this entire process. Dumpster will be picked up tomorrow morning Thursday 21st. 1015: L&R offsite briefly to acquire safety cones and caution signs to be placed around steps at the end of the tunnel leading uo to B146. After railing was remved the stairs are no longer safe to use. 1030: Josh Sohoppenhorst-PTSI completed LBP clean up. 1100: Tim Sears-NAVFAC signed off on the completed abatement work and acknowledged the site is ready for steel frame removal. 1130: PTIS and ATC completed their work and left site. 1315: Mike Tuttle-L&R talked to Tim Sears-NAVFAC about planned site walk on Friday the 22nd with L&R, HIS Constructors Inc. and Layne Dobbs-AllTrack to discuss excavation areas, placement of import stone that's going to be needed by AllTrack and placement of uncontaminated ballast being removed by AllTrack that L&R will eventually use for backfill. 1340: Mike Tuttle-L&R secures and departs site.

WORK PERFORMED PER SHIFT	
TASKS:	0645: Mike Tuttle arrived for L&R. 0740: Talked to Matt Burnett w/Building 146 about a good area to store steel frame until needed again to be put back in place. 0830: HCI crew arrived onsite, perform daily safety meeting and plan morning tasks. 0845: HCI starts work on taking steel frame structure apart and moving to storage area. 0905: Tim Sears stops by and a discussion took place between Tim Sears & Mike Tuttle about the manways that needed replaced in the excavation area. Tim notifies Mike Tuttle that gate passes are set up for 3 crew members for HIS contractors that Mike T. had requested. Tim Sears also took Mike Tuttle to the on base site where the blacktop/concrete will be taken from our project when the time comes. Tim Sears also gave Mike Tuttle submittals to be taken to L&R. 1245: HCI concludes work and removal and storage of steel frame structure and departs site. 1245: Mike Tuttle w/L&R departs site. Josh Harrell and Mike Tuttle go to an off base location (borrow site) of a possible place as to where back fill soil will come from for future excavation.

Description:
Steel frame being removed for tunnel structure.

Site orientation with HIS & Tetra Tech crews, reviewed and signed site HASP.	N/A
Mike Tuttle w/L&R inspected the installation of silt fence and snow fence in areas that are completed.	N/A

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS
Tim Sears (NAVFAC) notified Mike Tuttle w/L&R about wanting a quote from L&R on replacing 180' of remaining 6" storm line along with a 3rd manway on the west side of Building 146.

WORK PERFORMED PER SHIFT	
TASKS:	0700: Mike Tuttle w/L&R & and 2 crew members from HIS arrived. 0715: Tailgate meeting and signing of the daily HASP. Went over PPE and safety around moving equipment. 0745: HIS Constructors started installation of snow fence around excavation areas for safety. Crew waiting on silt fence to arrive to finish the remaining area. 1000: Tim Sears came by and notified Mike Tuttle (L&R) that the 6" drain line going from Building 146 to the setting tank on the north side of Building 146 can be removed, but will need to be capped at the building. Tim Sears gave Mike Tuttle a map of location. 1100: HIS started felling the trees and prepping the area for soil removal in the M3 area. HIS continued to trench for silt fence as well. 1200: Silt fence arrives and work starts on installation as tree removal continues. HIS marks line on the blacktop where it will need to be cut for excavation. 1300: Tim Sears stops by to talk about replacing 180' more of storm line on west side of building. He asked for a quote from L&R. 1330: HIS concludes tree removal and both crew members worked together to continue installing silt fence. Brian Morgan departs site. 1400: Tom Brent w/(NAVFAC) and Pete Ramanouskas w/(EPA) arrive to do a site walk. Kevin Losekamp as was involved in site walk as well. 1650: Matt Burnet w/Building 146 had to lock gate to the M3 area. HIS was working on silt fence install in this area; this was the only area remaining for installation. A small amount of silt fence still needs to be put up in this area and the rest of site is completed. 1700: Mike Tuttle w/L&R, Tetra Tech and HIS crew departs site.

Description: Trees being taken down in the M3 area.

WORK PERFORMED PER SHIFT	
TASKS:	0700: Mike Tuttle, Brian Morgan arrived for L&R, Crew of 3 from HIS and Kevin Losekamp w/ Tetra Tech. Dan Clingan w/HIS arrived later in the A.M. 0715: Tailgate meeting and crew signs HASP and others signed throughout the day as they arrived. 0800: Hanna Trucking arrives to haul the soil from M1 and M2 areas. 0930: During the 1st set of trucks leaving scale house the radiation alarms were set off, so Kevin Ray Tschaenn (NSWC) arrived to test the ground in M1 for radiation. 1015: HIS helped L&R with a skid steer pull stone back so we could locate the storm manway located at the south end of Building 146. Manway was located and measured. HIS cut stumps off of trees in the M3 area so they can be taken to the landfill. HIS dewatered 1 of the settling basins. HIS put down a stone road to all the dump trucks to get back to the M3 area. HIS put a stone path down in the TCE area in order to remove the overburdened material, which will be used as back fill in M2 & M3 areas. 1130: Josh Harrell w/ HCI (for HIS) arrived to drill through the blacktop to define how thick it was to determine what size concrete saw will need to be used: 12'-14' thick. 1200: Hanna Trucking arrived for the second round to deliver backfill and pick up second round of contaminated soil. There was enough backfill for M1 and almost enough trucks to haul all contaminated soil from M2. The rest will be hauled away out of M2 tomorrow. HIS continued backfilling M1, pulling soil back in M2 and getting soil ready to be loaded for tomorrow. Crew also continued working in M3. 1300: HIS worked in the M3 area for the rest of the day pulling soil back and getting it ready to haul. 1700: HIS and Mike Tuttle w/L&R departs site. • Tim Sears and Tom Brent w/(NAVFAC) were on and off site several times during the day, • 249.67 tons of contaminated soil was hauled to the land fill today (12 truckloads), • Six trucks of back fill were brought in, • Six trucks on site from Hanna Trucking.

Onsite tailgate meeting w/HIS to go over PPE/Safety around equipment/slip and falls & overhead power lines.	N/A
Crew(s) signed L&R daily health and safety sheet for our file .	N/A

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS
Tim Sears (NAVFAC) notified Mike Tuttle (L&R) about the steel ductile pipe that will need to be used under the railroad track. Tim left a NAVFAC base map for L&R to look at. Tim Sears also notified Mike Tuttle that in the M2 &M3 areas there will need to be 1 foot of top soil.

WORK PERFORMED PER SHIFT	
TASKS:	0700: Mike Tuttle arrived for L&R, Crew of 3 from HIS and Kevin Losekamp w/Tetra Tech. Dan Clingan w/HIS arrived later in the A.M. 0715: Tailgate meeting and crew signs HASP; others signed throughout the day as they arrived. Discussed safety around moving equipment, slip and falls and overhead objects, power lines etc. 0800: Hanna Trucking arrives (14 trucks) to haul the soil from M2 and M3 areas. They also brought backfill upon arrival. HIS stockpiled backfill till needed. 0830: Soil removal completed in the M2 area. 0845: BRG Surveying arrived to survey the excavation area for the HWI TCE area. Kevin Losekamp took a sample per Tom Brent (NAVFAC) from the upper part of 16SB200 (0-2 foot interval) to see if it meets the IDEM Containment-In Screening value. BRG was on site for an hour and a half. 0900: HIS moved excavator to M3 area and started loading contaminated soil to be taken to the dump and used the skid loader to start backfilling M2. Hanna Trucking left with their last truck loaded with contaminated soil to be taken to the landfill. 1010: Tim Sears (NAVFAC) stopped by and we talked about ductile pipe will need to be used under the railroad track, but just between manway 1 & 2; SDE sewer pipe in the other areas. Tim Sears left a NAVFAC map for L&R to look at. HIS continues backfilling M2 and digging out M3 till 2nd round of trucks return. 1230: HIS dewatered a 2nd settling basin. 1200: Hanna starts arriving for the 2nd round of dropping backfill and loading contaminated soil to be taken to the landfill. 1430: HIS completes loading Hanna with the last of soil coming from M3. HIS completed a decontamination of their tracks and bucket before loading clean backfill with the same piece of equipment (photos taken). One HIS truck came back to move backfill from stockpile and started backfilling M3 to within a foot. One foot of topsoil is needed over the areas for M2 & M3 per Tim Sears. Heavy rain at this point. Rest of the day consisted of backfilling and leveling out M3 area and fixing the road for the trucks to drive on to get back to M3 and securing the site for the weekend. 1530: Kevin Losekamp (Tetra Tech) departs site. 1700: HIS Crew and Mike Tuttle w/L&R departs site. • Tim Sears and Tom Brent w/(NAVFAC) were on and off site a couple times during the day, • 558.03 tons of contaminated soil was hailed to the land fill today (28 truckloads), • Fourteen trucks of backfill were brought in.

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS

HIS, while loading blacktop/concrete, started the removal of setting basin by the tunnel. All of the concrete taken out except the bottom. HIS was having trouble removing base because it's attached to the bedrock or just won't come up. Tom Brent (NAVFAC) notified Mike Tuttle (L&R) and HIS as long as it's setting on bedrock it's ok to leave the base in the ground. Terry Knecht (HIS operator) said that it setting on bedrock and bedrock all around.

HIS started draining the settling basin to the west again. It was completely full after it was drained last week and it's slowly filling back up again. May or may not be a issue. Mike Tuttle will have to look into it with NAVFAC.

WORK PERFORMED PER SHIFT	
TASKS:	0700: Mike Tuttle arrived for L&R, Crew of 3 from HIS . Dan Clingan w/ HIS arrived @ 0815. 0715: Tailgate meeting and crew signs HASP and others signed though out the day as they arrived. Discussed safety around moving equipment, slip and falls (snow and ice on the ground), hot work for cutting by ABC Contractors Inc. and over head objects, power lines, etc. 0800: ABC Contractors Inc. arrives to cut blacktop at the north end of building. Tailgate meeting and L&R HASP/hot work permit signed. One (1)worker; One (1) truck on site from ABC. 0820: Hanna Trucking arrives (1 truck) to haul blacktop/concrete from the NE area of excavation to be taken to the on base site dump. 0830: HIS started removal and loading blacktop/concrete into the Hanna truck .Hanna started taking trips back and forth to on base site dump. 0930: ABC Contractors Inc. completes saw cut of blacktop and departs site. HIS continues breaking up blacktop/concrete and loading truck. HIS while loading blacktop/concrete HIS started the removal of setting basin my the tunnel. All of the concrete removed except the bottom. HIS was having trouble removing concrete because it was attached to the bedrock or just wouldn't come up. 1345: Tom Brent (NAVFAC) arrived and he is okey that we leave the bottom of settling basin as long as it's setting on bedrock. Terry Knecht (HIS operator) said that the bottom is setting on bedrock and bedrock all around. Depth of base is approximately over 6" ;also putting down fabric and stone for Hanna Trucking to drive on in the contaminated area tomorrow. 1400: MacAlliser Rental arrived to repair HIS track steer. Personnel departed at 1500. 1500: HIS started to drain the settling basin to the west again and it was full after being drained last week. Settling basin slowly filling back up. May be a issue. Mike Tuttle w/L&R will check with NAVFAC on the possible cause. HIS continues pulling back over burden in the northern past of the excavation area and stock pilling for use as backfill in the future. HIS, while loading blacktop/concrete, started the removal of the settling basin by the tunnel. All of the concrete was taken up except the bottom. HIS was having trouble removing bottom because it may be attached to the bedrock or it just won't come up. HIS finished the day pulling some of the over burden back and getting ready for Hanna Trucking to arrive tomorrow. 1730: HIS Crew and Mike Tuttle w/L&R departs site. • Tim Sears w/ (NAVFAC) was on site a couple times during the day. • Hanna Trucking took 9 truck loads of black top/concrete to on base site dump.

WORK PERFORMED PER SHIFT	
TASKS:	0700: Mike Tuttle arrived for L&R, Crew of 3 from HIS. Dan Clingan w/ HIS arrived @ 0830. 0715: Tailgate meeting and crew signs HASP and others signed though out the day as they arrived. Discussed safety around moving equipment and trucks (14 trucks on site); slip and falls (snow and ice on the ground); frost bite; overhead objects; power lines, etc. HIS continued excavating north end of area and preparation for loading trucks. 0840: Hanna Trucking starts arriving (14 trucks) bringing back fill and hauling contaminated soil to the land fill. Mike Tuttle w/L&R set it up so that 5 trucks at a time were staggered by 20 minutes. We were supposed to have 15 trucks but, 1 driver called in sick. 14 trucks seem to fit our schedule anyway as far as making 2 trips a day. HIS, when not loading trucks, continued to pull back over burden 1.5' down in the northwest area that's considered to be clean. Clean overburden is being stockpilled in the northwest area of the work area where the ground is clean inside silt fence. 1000: HIS concludes excavation of overburden except in a small area where trucks back up to load. 1130: Kevin w/Tetra Tech notified Mike Tuttle w/L&R that 286 tons was taken to landfill in the a.m. on the 1st trip. Each of Hannas' 14 trucks brought backfill stone in as they arrived the 2nd time. 1245: Mike Tuttle w/L&R met with Kevin Losekamp w/Tetra Tech, Tim Sears & Tom Brent w/NAVFAC about work to be done his week. Reviewed were capping storm drain lines going to the settling basins, putting signage up in Building 146 to keep personnel from using the restrooms, using plastic barrier for when we have open excavation to protect clean soil from dirty during rain/snowfall. The forecast calls for snow this weekend. In that case, we could just drain water back into storm sewer because the melted snow will be captured on plastic and will be clean uncontaminated water. 1300: Hanna started arriving with 2nd trip each truck bringing backfill stone and taking contaminated soil to the landfill. HIS started loading trucks with contaminated soil that was stockpiled in the morning from excavating. 1430 - 1500: HIS excavate the northern end of area and pile the soil up for the trucks to pick up tomorrow morning, that's including the manway (labeled #1 manway) attached to the waste water service line by the tunnel. The last of Hanna truck left site at 1500. 1530: Tom Brent (NAVFAC) arrived and Mike Tuttle w/L&R asked about some of the remaining tunnel that is hanging over the contamination area by a couple feet. Tom is okay that we leave the soil underneath the tunnel so that the tunnel isn't compromised. Tom is also okay with not excavating under the steps of the loading dock @ Building 146 for the same reason. Both of these areas are in the excavation area but we don't want to compromise either structure. 1700: HIS Crew and Mike Tuttle w/L&R departs site. • Tim Sears w/(NAVFAC) was on site a four times during the day. Tom Brent (NAVFAC) stopped by twice. • HIS switched buckets on excavator every time they switched from clean to dirty soil. • Hanna Trucking had 14 trucks on site today. • Hanna Trucking hauled 579.04 tons total today.

Description:

Roadway and guide cones put down for Hanna Trucking to back down to HIS excavator. Made road to keep trucks off of contaminated soil.

Soil being loading into trucks. Furthest point of northern excavation area is in the background in this picture.

Description:	
Exposing manway by the tunnel. This was removed on this day.	
The end of day: The area at the northern end of excavation down to bedrock. Picture taken facing west.	

Description: **The end of day: The area at the northern end of excavation down to bedrock. Picture taken facing east.**	o
This picture also taken facing east. Stockpile of contaminated soil for pick up tomorrow.

Backfill stone			Mike Tuttle	

LIST SAFETY/PERMIT/QC ACTIONS TAKEN PER SHIFT / INSPECTIONS CONDUCTED	FOLLOW UP MEASURES REQ'd
Onsite tailgate meeting w/HIS to go over PPE/Safety around moving equipment and trucks; slip and falls (ice and snow); frostbite; overhead objects; power lines.	N/A
Crew(s) signed L&R daily health and safety sheet for our file.	N/A

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS
Water keeps running out on the east side of the steps and doesn't stop. The excavation is complete in this area and the water is running out from under the blacktop. Although it is a small amount, it's continuous and won't stop. I've notified Tim Sears w/NAVFAC though an e-mail to ask if the base wants to look into it.

WORK PERFORMED PER SHIFT	
TASKS:	0700: Mike Tuttle arrived for L&R, Crew of 3 from HIS. 0715: Tailgate meeting and crew signs HASP and others signed throughout the day as they arrived. Discussed safety around moving equipment and trucks (14 trucks on site), slip and falls (snow and ice on the ground), frostbite and overhead objects power lines ex. HIS continued excavating north end of area and preparation for loading trucks. 0800: Hanna Trucking starts arriving (14 trucks) bringing backfill and hauling contaminated soil to the landfill. Continue same as yesterday with 5 trucks at a time staggered by 20 minutes. We have 14 trucks total. 14 trucks will continue for the rest of the week unless something changes. All 14 trucks dump backfill into completed area at northern end. HIS, when not loading trucks, continued excavating the northern end of the area down to bedrock. 0830: HIS started spreading stone to a foot in thickness waiting for ATC personnel to arrive tomorrow to do compaction test before we do the next lift. HIS started compacting stone with a Roller/Cat CS 433C. Stone will be placed in 12'' lifts awaiting someone tomorrow from ATC to start compacting testing. 0930: HIS finished 1st round of loading Hanna Trucking. 0945: HIS pushed over lighting rod pole that was in excavation area. HIS pushed it over to the south. HIS used a chop saw to cut most of the base so HIS could push it over where they wanted it to fall; the pole fell where wanted. HIS cut the pole into 20' sections to be recycled. Tom Brent w/NAVFAC was on site and Mike Tuttle w/L&R confirmed that the concrete base is to be taken to the landfill due to the concrete being contaminated. 1000: Mike Tuttle w/L&R made signs to hang in Building 146 for each bathroom indicating they were out of order because we're removing the wastewater line to the building. 1130: Kevin w/Tetra Tech notified Mike Tuttle w/L&R that 282.50 tons was taken to landfill in the a.m. On the 1st trip each of Hanna's14 trucks also brought backfill stone in as they arrived the 2nd time. 1215: Hanna started arriving with 2nd trip; each truck bringing backfill stone and taking contaminated soil to the landfill. HIS started loading trucks with contaminated soil before that all 14 trucks dumped backfill into the northern area; same as in the morning. HIS continued excavating contaminated area and stockpiling for trucks to haul off tomorrow. HIS will start excavating down along the building tomorrow where the railroad track will go back in place. That area will be excavated and backfilled 1st so AllTrack can get the track put back ASAP. HIS finish the day spreading stone out and rolling/compacting stone with the Cat roller. 1600: One (1) one member of HIS crew departed to go pick up parts for another job. 1700: HIS crew and Mike Tuttle w/L&R depart site. • Tim Sears w/ (NAVFAC) was onsite a four times during the day. Tom Brent (NAVFAC) stopped by. • HIS switched buckets on excavator every time they switched from clean to dirty soil. • Hanna Trucking had 14 trucks on site today. • Hanna Trucking hauled 568.77 total tons today.

Description: **Backfill stone (53s) Being dumped in the hole by the truck as they come in. This area is down to bedrock. HIS is spreading the stone out.**	
Stone being rolled in in 1' lifts. Power pole in the foreground of the picture will be moved by the base after backfill. The base is unable to gain access to it due to the excavation.	

Description:

Depth measurement by the steps at Building 146. Area is down to bedrock.

The end of day: The 2nd set of trucks that dumped in the this area, stone being spread out and rolled in.

Description: **The end of day: The 2nd set of trucks that dumped in the this area, stone being spread out and rolled in.**	
Loading of Hanna trucks from northern area.

Back fill stone			Mike Tuttle	

LIST SAFETY/PERMIT/QC ACTIONS TAKEN PER SHIFT / INSPECTIONS CONDUCTED	FOLLOW UP MEASURES REQ'd
On site tail gate meeting w/HIS to go over PPE/Safety around moving equipment and around trucks/slip and falls(ice and snow) frost bite,Very cold temperatures,Overhead objects, power lines	n/a
Crew(s) signed L&R daily heaith and safety sheet for our file .	n/a

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS
Back fill is freezing because of the very low temps there for Cardno/ATC can't get the correct results on the compaction testing. Back fill will stop for the day untill tomorrow hopefully weather is warmer. HIS during excavation took out some of the2'' pvc pipe goiung from building 146 to the settling basin to the west and the water in the basement emptied out into the basin. Mike Tuttle w/L&R sent a e-mail to Tim Sears w/NAVFAC about if NAVFAC wants HIS to plumb it back in after HIS replace the wastewater line that will be replaced at the end of the job.

WORK PERFORMED PER SHIFT	
TASKS:	0700: Mike Tuttle arrived for L&R/, Crew of 3 from HIS. One crew member arrives at 0830 0715: Safety tailgate meeting and crew signs HASP and Jeff Coleman signed L&Rs HASP and HASP daily sign in sheet when he arrived. Discussed safety around moving equipment and trucks (14 trucks on site), silp and falls(snow and ice ion the ground), frostbite (very colds temperatures) and over head objects power lines Etc. Mike Tuttle w/ L&R and personnel w/ HIS goes over the days activity's HIS continued excavating north end of area and preparation for loading trucks. 0800: Hanna Trucking starts arriving (14 trucks) bringing back fill and hailing contaminated soil to the land fill. Rotation continues the same as yesterday with 5 trucks at a time staggered by 20 miniutes. We have 14 trucks total. All 14 trucks dump back fill into completed area at northern end. Two trucks will be added for tomorrow for a total of 16 trucks. HIS when not loading trucks continued excavating northern end of area down to bed rock. 0800: Jeff Coleman w/Cardno/ATC arrived to do compaction testing on the back fill that is going under black top, tunnel and railroad. The back fill material freezes before HIS gets it rolled in so the testing was stopped. HIS & L&R will wait till tomorrow for hopefully warmer weather. HIS keeps putting back fill in on the west side of the tracks where it doesn't need compaction testing done and rolling in with a Cat CS 433C. 1030: A conference call took place with Brian Morgan, Mike Tuttle w/L&R, Kevin Losekamp w/Tetra Tech because and Dan Clingan and Terry Knecht w/HIS. Kevin w/Tetra Tech notified Mike Tuttle w/L&R that 291.99 tons was taken to land fill in the a.m HIS when not loading trucks continued excavating northern end of area down to bed rock. 1200: Hanna started arriving for their 2nd trip of backfill and HIS started loading contaminated soil to be taken the landfill. The backfill being brought in is being stock pilled and not directly dumped in excavation area like this morning and yeterday because of freezing conditions of the backfill. 1245: Jeff Coleman w/Cardno/ATC departs site. I'll notify him later today about what time to be here tomorrow. 1300: HIS completed loading out Hanna Trucking for the 2nd trip. HIS started removal of settling basin that's to the west of building 146 . HIS ran into the same issue as the 1st one they excavated out. The concrete base of the basin wouldn't come out due to it setting on the bedrock plus wheres two monitoiring wells wright next to the basin and we didn't want to compromise. Mike Tuttle w/L&R made the call not to take it out . Mike Tuttle will ok this with Tim Sears w/NAVFAC. HIS backfilled hloe w/ the over burden soil. 1730: HIS completed removal of the settling basin to the west of building 146. 1745: HIS Crew and Mike Tuttle w/L&R departs site. • Tim Sears w/ (NAVFAC) was on site a three times during the day. Tom Brent (NAVFAC)stopped once. • HIS switched buckets on excavator every time they switched from clean to dirty soil. • Hanna Trucking had 14 trucks on site today. Hanna had 12 trucks in the p.m. because of one driver had accident and one driver had a doctors appointment . • Hanna Trucking hauled 534.22 tons total today.

Description: **Cardno/ATC doing compaction testing at the north end of excavation area.**	
HIS continue excavating northern area.	

Description:

Demoliton and excavation of settling basin that was to the west of building146.

Decription: **HIS removing pump and pump floats out of settling basin.**	
Description: **Continue of settling basin removal.**

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS
Water keeps running out on the east side of the steps and doesn't stop. The excavation is complete in this area and the water is running out from under the blacktop. There's is also a valve leaking in the crawl space of Building 146 and running out into our excavation. Tim Sears w/NAVFAC had (2) base personnel that do repairs to the steam system arried onsite to look at the issue's. They fixed the leaking valve in the crawl space, but the steam line leaking issues HIS will just have to dewater the area every morning until we have it all backfilled. NAVFAC may fix the issue, but repair won't be done before our project will be complete. Mike Tuttle w/L&R hasn't noted this in passed dailys, but where are desicrepancies in the scales between the base and at the landfill.

WORK PERFORMED PER SHIFT	
TASKS:	0700: Mike Tuttle arrived for L&R/, Crew of (3) from HIS. HIS had (1) crew member arrives at 1100. 0715: Safety tailgate meeting and crew signs the daily HASP and Jeff Coleman w/ATC and Dan Clingan w/HIS signs the daily HASP when they arrived. Discussed safety around moving equipment and trucks (16 trucks on site), silp and falls (snow and ice ion the ground), frostbite (very colds temperatures) and over head objects power lines Etc. Mike Tuttle w/ L&R and personnel w/ HIS went over the days activity's HIS continued excavating north end of area and preparation for loading trucks. 0800: Hanna Trucking starts arriving (16 trucks) bringing back fill and hailing contaminated soil to the landfill. Rotation continues the same as yesterday with 5 trucks at a staggered time of 20 miniutes. We have 16 trucks total. All 16trucks dump back fill into completed area at northern end. HIS when not loading trucks continued excavating northern end of area down to bed rock. 0945: Jeff Coleman w/Cardno/ATC arrived to do compaction testing . HIS starts backfilling in the areas where compactin testing needs done. That is under the track (95%) and under the backtop (90%). HIS continues putting backfill under the track and blacktop areas then rolling in the backfill in 1' lifts with a roller (Cat CS 433C). Compaction test done at each lift. 1030: Kevin w/Tetra Tech notified Mike Tuttle w/L&R that 322.94 tons was taken to land fill in the a.m HIS when not loading trucks continued excavating northern end of area down to bed rock. 1200: Hanna started arriving for their 2nd trip of backfill and HIS started loading contaminated soil to be taken the landfill. The backfill being brought in is being dumped into the excavation area instead of stock pilling.Unlike yesterday it's warm enough that backfill isn't freezing. 1245: Jeff Coleman w/Cardno/ATC departs site. I'll notify him later today about what time to be here tomorrow. 1300: Tom Brent and Tim Sears w/NAVFAC had (2) base personnel that do repairs to the steam system arried onsite to look at the issue's. They fixed a leaking valve in the crawl space, but the steam line leaking issues HIS will just have to dewater the area every morning until we have this area backfilled. NAVFAC may fix the leaking steam line issue, but repair won't be done before our project will be complete. 1500: HIS completed loading out Hanna Trucking for the 2nd trip. There were 15 trucks took loads out in the p.m. The 16th truck couldn't make it back to the scales by closing time ,but all 16 truck brought backfill in. HIS continue backfilling, compaction testing and pulling the rest of the contaminated soil out of the northern area and stock pilling the soil to be loaded out next week. (stock pill was covered with plastic because snow/rain storms this weekend) HIS excavated the 2nd manway and the concrete base of the lighting rod that HIS took down yesterday. HIS finished the day putting down and compacting one more lift, securing the site. 1600: HIS had (2) crew members departs site to try to beat the coming in storm. 1700: HIS has (1) Crew (he lives local) and Mike Tuttle w/L&R departs site. • Tim Sears w/ (NAVFAC) was onsite a three times during the day. Tom Brent (NAVFAC) stopped three times. • HIS switched buckets on excavator every time they switched from clean to dirty soil. • Hanna Trucking had 16 trucks on site today. • Hanna Trucking hauled 637.97 total tons today.

Description:	
Backfill stone (53s) Being dumped in the hole by the truck as they come in. This area is down to bedrock. HIS is spreading the stone out. ATC is doing compaction testing in 1' lifts.	
Stone being rolled in in 1' lifts and compaction tetsing	

Description:

Excavation of northern area.

Description: **More lifts being put in and compaction testing.**	
The end of the day. The last lift being put in.

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS

On the start of work this morning. HIS notified Mike Tuttle w/L&R that there was appromitly 3000 + gallons in our trench from rain/ steam line leak. HIS drained water into the wastewater storm drain.
Issues arising with compaction testing failing due to backfill product, moisture in backfill and or the moisture coming from the steam line. We're not sure what the issue is yet Cardno/ATC,HIS, L&R and NAVFAC will work together to figure issue out.

A small section of transite pipe was excavated (not connected to anything)and Tim Sears w/ NAVFAC sent Maven Construction and Environmental to look at what we have.

WORK PERFORMED PER SHIFT	
TASKS:	0700: Mike Tuttle arrived for L&R/, Crew of (3) from HIS. HIS had (1) crew member arrives at 1030(project manager) 0715: Safety tailgate meeting and crew signs the daily HASP and Jeff Coleman w/ATC and Dan Clingan w/HIS signs the daily HASP when they arrived. Discussed safety around moving equipment and trucks (16 trucks on site), silp and falls (snow and ice ion the ground), frostbite, and over head objects power lines Etc. There was approximately 3000 gallons of water in the trench we left for the weekend from rain/steam line leaking. HIS pumped the water into the storm drain. 0720: Mike Tuttle w/ L&R and personnel w/ HIS went over the days activity's. HIS starts pulling back the top 6'' of backfill that's frozen in preparation for rolling back in and start of compaction testing done by Jeff Coleman w/ Cardno/ATC when he arrives. 0800: Hanna Trucking starts arriving (16) trucks bringing back fill and hailing contaminated soil to the landfill. Rotation continues the same as Friday with 5 trucks at a staggered time of 20 miniutes. We have (16) trucks total. All (16)trucks dump backfill into completed area at northern end. HIS loaded out (14) trucks and keep the last (2) trucks back to move the over burden soil that was stock piled back. HIS loaded the (2) trucks and took the soil to M2 & M3 for the 1' of top soil that's to be put on top of backfill that's already in both areas per Tim Sears w/NAVFAC. 0830: Mike Tuttle w/L&R talked to Tim Sears w/NAVFAC about leaving stone road we used to get trucks to M3 area. Tim Sears is ok with use leaving the road as long as we dress it up and make it look nice. 1115: Jeff Coleman w/Cardno/ATC arrived to do compaction testing . HIS starts compaction of the thawled backfill that was frozen earlier this morning in the areas where compacting testing needs done excavating north end of area. Jeff Coleman w/Cardno/ATC starts compaction testing that's is under the track (95%) and under the backtop (90%). HIS continues putting backfill under the track and blacktop areas then rolling in the backfill in 1' lifts with a roller (Cat CS 433C). Compaction test done at each lift. There are issues with the backfill being able to pass compaction tests and put a stop with backfilling. This will hopefully this will be corrected by early tomorrow with a meeting between HIS, L&R, Carrdno/ATC and NAVFAC. 1200: Hanna started arriving for their 2nd trip of backfill and HIS started loading contaminated soil to be taken the landfill. The backfill being brought in is being dumped into the excavation area instead of stock pilling. 1300: HIS tries pulling back the backfill to see if compaction is better and it is, but still needs tobe verified that's this will work with tomorrows meeting. 1400: HIS completed loading out Hanna Trucking for the 2nd trip. There were (14) trucks took loads out in the p.m. One of the trucks in the p.m. didn't make it back due to doctor appointment (15) trucks brought backfill in. 1400: Maven Construction and Environmental stopped by site to look at the couple pieces of transite pipe that we found during excavation. The pipe wasn't connected to anything. 1600: Jeff Coleman w/Cardno/ATC departs site. I'll notify him to be on site at 0900 tomorrow. 1700: Site is secured with HIS (4) Crew members and Mike Tuttle w/L&R departs site. • Tim Sears w/ (NAVFAC) was onsite a three times during the day. Tom Brent (NAVFAC) stopped by once • HIS switched buckets on excavator every time they switched from clean to dirty soil. • Hanna Trucking had 16 trucks on site today. • Hanna Trucking hauled 593.73 total tons today.

Description: **Water being pumped out 1st think in the morning . There is approximately 3000 gallons from steam line leak/rain from over the weekend.**	
HIS pulling back 6''of frozen surface to be rolled back in and tested for compaction.	

Description:	
1' of top soil that was put into M2.	
1' of top soil being put into the M3 area	

Description: **Cardno/ATC doing compaction testing**	
The end of the day. Pulling back backfill to try to fix compaction problem.

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS

Delay due to the compaction issue yesterday (16Dec13) . Mike Tuttle, Brian Morgan w/L&R, Dan Clingan w/HIS and Tim Sears w/NAVFAC conducted a conference call about the compaction issue. HIS will pull all the backwill (53s)out down to bedrock in the entire rail area in a 15' width. Hanna will bring #2 stone and it will be put down as a base about halfway up then 53s and #2 stone will be mixed and put up to grade. The grade is per AllTracks measurements for the rail area.

WORK PERFORMED PER SHIFT

TASKS:	0700: Mike Tuttle arrived for L&R/, Crew of (3) from HIS. HIS had (1) crew member arrives at 0800(project manager) 0710: Safety tailgate meeting and crew signs the daily HASP and Jeff Coleman w/ATC and Dan Clingan w/HIS signs the daily HASP when they arrived. Discussed safety around moving equipment and trucks (15 trucks on site), silp and falls (snow and ice ion the ground), frostbite, and over head objects power lines Etc. Pump was left to run over the night to keep up with the water in the trench from steam line leaking. 0715: Mike Tuttle w/ L&R and personnel w/ HIS went over the days activity's. HIS starts pulling back the top 2'' of backfill that's frozen in (In blacktop area only) preparation for rolling stone back in and start of compaction testing done by Jeff Coleman w/ Cardno/ATC when he arrives. 0715: Hanna Trucking starts arriving with (15) trucks(just hailing contaminated soil to the landfill in the a.m.) and rotation continues same with 5 trucks at a staggered time of 20 miniutes. We have (15) trucks total. Our normal is(16) trucks but (1) broke down. HIS loaded out (15) trucks. HIS starts loading the truck with soil from the southern area of the site up by building 146 in the rail area. Our main consitration is the on getting rail area excavated and backfilled as soon as possible. 0800: Mike Tuttle, Brian Morganw/L&R, Dan Clingan w/HIS and Tim Sears w/NAVFAC conducted a conference call about the compaction issue. We came to the the conclusion that this will need to be done. HIS will pull all the backwill 53 stone out down to bedrock in the entire rail area in a 15' width. Hanna will bring #2 stone and it will be put down as a base about halfway up then 53s and #2 stone will be mixed and put up to grade per AllTrack. The steam line leak will not be fixed anytime soon. HIS will have to continue to pump out water into wastewater storm line. The #2 stone will also act as a french drain so erosion won't occur from the 53 stone. There won't be compaction testing done. It will be proof rolled. (This was ok'ed by Tim Sears w/NAVFAC) 0830: Jeff Coleman w/Cardno/ATC arrived to do compaction testing. HIS broke up the 1st couple inchs of frozen 53 stone in the backtop area only and rolled w/ Cat CS433C then Jeff done compaction test and it passes with over 100%. HIS also pulling all of the 53s in th rail area out to bedrock. There will be #2 stone put back in as a base per our meeting this morning w/Tim Sears w/NAVFAC 1115: Hanna started arriving for their 2nd trip of backfill(#2 stone for the rail area) and HIS started loading contaminated soil to be taken the landfill. The backfill (#2 stone)being brought in is being dumped into the excavation area instead of stock pilling. 1130: HIS put in a 10' long 15' round piece of corrugated pipe to make a sump pump basin to help collect the water that is leaking from the steam line and coming from the crawl space under building 146. This will be used for the rest of the week and through the holiday week (no work next week). The piece of pipe was supplied by Tim Sears w/ NAVFAC. HIS continues loading trucks and putting the #2 stone down in the rail area. All stone is getting rolled in 1' lifts. 1245: Jeff Coleman w/Cardno/ATC departs site. We shouldn't need ATC back till after the holidays if at all. HIS continued putting in the #2 stone and then #2 & 53 stone mixed and put on top of that. Setting up the sump pump that was HIS design. 1400: Maven Constuction and Envionmental arrived to remove the few pieces of transite we uncovered in our excavation. 1530: Hanna started arriving to drop # 2 stone (no back hall due to not enough time). HIS finished the day working on rail area, excavations to the south up against the building, braking up the concrete base of the lighting rod into small enough pieces that can be hailed. 1700: Site is secured with HIS (4) Crew members and Mike Tuttle w/L&R departs site. • Tim Sears w/ (NAVFAC) was onsite a several times during the day. Tom Brent (NAVFAC) stopped by once. • HIS switched buckets on excavator every time they switched from clean to dirty soil. • Hanna Trucking had 15 trucks on site today. • Hanna Trucking hauled 612.04 total tons today.

Description: **The 53 stone has been pulled out in the rail area and #2 stone being put back in.**	
Sump system being installed for water that's running into our excavation. (15'' corrugated pipe in the picture)	

Description:	
The #2 stone being put into the rail area as base just on top of the bedrock.	
Pictured is the 2nd layer #2 & 53s mixed and rolled in (northern area). Also the sump system.	

Description: **Start of excavation just inside the south area up against the building. Also pictured is the wastewater line that will be plumbed back into the new wastewater line.**	
Measurement to top of dock and grade at the deepest. Bottom of the steps is grade.

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS

Tim Sears w/ NAVFAC notified Mike Tuttle w/ L&R that there is in fact not a water leak due to the steam line to building 146 and that the condensation pumps in he boiler building that is north of the site isn't working there for the that moisture is running down the sandy trench the steam lines come through. Tim had just found this out from steam line maintenanance worker. There are no changes as of this point. We will still need to continue pumping water.

Tim Sears also notified Mike Tuttle w/L&R that both wastewater lines coming out of the westside of building 146 is to be capped or plugged. Mike Tuttle believes this maybe a issue do to one of them has water from the basement constantly running out of it. The other one was plugged, it was dry.

WORK PERFORMED PER SHIFT	
TASKS:	0700: Mike Tuttle arrived for L&R/, Crew of (3) from HIS. HIS had (1) crew member arrives at 0900 (Project Manager) 0710: Safety tailgate meeting and the crew(s) signs the daily HASP and Dan Clingan w/HIS signs the daily HASP when they arrived. Discussed safety around moving equipment and trucks (16 trucks on site), silp and falls (snow and ice on the ground/equipment), frostbite, and over head objects power lines Etc. Sump pump was left to run over the night to keep up with the water in the temporary sump that HIS put in. 0715: Mike Tuttle w/ L&R and personnel w/ HIS went over the days activity's. 0715: Hanna Trucking starts arriving with (16) trucks(just hailing contaminated soil to the landfill in the a.m.) and rotation continues same with 5 trucks at a staggered time of 20 miniutes. We have (16) trucks total. HIS loaded out (16) trucks. HIS starts loading the truck with soil from the southern area of the site up by building 146 in the rail area. Our main consitration is the on getting rail area excavated and backfilled as soon as possible. HIS also continues backfilling in1' lift and rolling in #2 & 53 stone. 0845: Scott Powell w/L&R arrived for a site walk and a meeting. 0920: A meeting was held at Tim Sears office w/ NAVFAC including Mike Tuttle, Scott Powell w/L&R and Tim Sears w/NAVFAC and Debbie Dills (contract officer)w/ NAVFAC concerning some contract issues. 1000: HIS plugged one of the two wastewater drain pipes coming out of the westside of building 146. The 2nd one will be capped at a later date. Both are per Tim Sears w/ NAVFAC (see note in the "remarks" above). 1115: Hanna started arriving for their 2nd trip of backfill(53 stone) and HIS continues loading contaminated soil from southern area to be taken the landfill. The backfill (53 stone)being brought in is being dumped into the excavation area instead of stock pilling. HIS starts backfilling grass areas with the 53 stone up to a foot. Top foot gets top soil in grass areas. 1230: HIS starts pumping down the 3rd settling basin to the far east side and continue excavation and backfilling work. Settling basin will be removed at a later date. 1245: HIS had a JD 450J bulldozer trucked in on a lowboy to help move stone faster and for more weight to help with compaction. The bulldozer was delivered by HIS. HIS finished the day putting in 1' lifts all over the north area with main emphasis on putting 1' lifts in the rail area. Mike Tuttle w/ L&R notified HIS of grade reference points from AllTrack. On the south end 64'' from top of loading dock to grade. On the north end 21" from top of remaining rail to grade. The south end is pictured below. 1700: Site is secured with HIS (4) Crew members and Mike Tuttle w/L&R departs site. • Tim Sears w/ (NAVFAC) was onsite a several times during the day. Tom Brent (NAVFAC) stopped by once. • HIS switched buckets on excavator every time they switched from clean to dirty soil. • Hanna Trucking had 16 trucks on site today. • Hanna Trucking hauled 658.56 total tons today.

Description: **Pictured: Plugging of wastewater line 2nd line from NW corner of building146.** **1st drain line line will be plugged at a later date.**	
Reference picture for where 2nd drain is located pictured above.	

Description:

Building up the rail area with #2 & 53 mix with #2 stone base by itself.

Rail area rolled in. Orange marker line on the loading dock wall is grade per AllTracks want grade to be for rail reinstall. (Alltracks reference points for rail) South end 64'' from top of dock to grade. North end 21'' from top of remaining rail to grade.

Description: Continue rail area build up in 1' lifts.	
HIS continue of excavation in the south area.

Onsite tailgate meeting w/HIS to go over PPE/Safety around moving equipment and trucks,slip and falls (ice and snow on ground), frostbite, overhead objects, power lines Etc.	N/A
Crew(s) signed L&R daily health and safety sheet for our file.	N/A

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS

WORK PERFORMED PER SHIFT

TASKS:	0700: Mike Tuttle arrived for L&R/, Crew of (3) from HIS. Safety tailgate meeting and the crew(s) signs the daily HASP. Discussed safety around moving equipment and trucks (16 trucks on site), silp and falls (snow and ice on the ground/equipment), and over head objects power lines Etc. Sump pump was left to run over the night to keep up with the water in the temporary sump that HIS put in. 0715: Mike Tuttle w/ L&R and personnel w/ HIS went over the days activity's. 0800: Hanna Trucking starts arriving with (14) trucks bringing 53 stone and hailing out contaminated soil. Rotation continues same with 5 trucks at a staggered time of 20 miniutes. We have (16) trucks total after the day is done. HIS starts loading the truck with soil from the southern area of the site. Our main consitration is the on getting rail area excavated and backfilled as soon as possible. HIS also continues backfilling in1' lift and rolling in #2 & 53 stone. 1000: One of last Hanna drivers of the morning notified Mike Tuttle w/ L&R that there is a wreck on ST. RD. 231 and all of the Hanna trucks from the morning will not be able to make it back for the p.m. run. Mike Tuttle w/ L&R notified Terry Knecht w/ HIS not to evcavate anymore soil because we won't be able to load the soil out today wish normally wouldn't be a issue but, a lot of rain is moving in and the job will be stopped till January 2nd for the holidays. The backfill (53 stone)being brought in is being dumped into the excavation area instead of stock pilling. HIS starts backfilling all areas with the #2 & 53 stone mix in 1' lift which is except in the grass areas .Those areas are backfilled with 53 stone with1' of top soil. 1145: The other two Hanna trucks that didn't make it in this morning arrived and dumped 53 stone and HIS keep them on site to hall 53 stone from our stock pile to backfill our excavated areas. The plan was to use the stone that Hanna would've brought us on the 2nd trip and then would've loaded out all the Hanna trucks(didn't happen due to the accident), but with the trucks not able come back we're using the stock pile. HIS loaded out the two trucks that we was using to move the stock pile. 1200: Tom Brent w/ NAVFAC stopped by the site and was ok with how we are going to leave the site over the holiday week . Nate Rollins w/ HIS lives close to the base and Tom is also ok with him coming to the site once a day over the weekend to check on the pumps because of the amount of rain that we are forcasted to get over the weekend. Pictures of how the site was left is below. Both Tim Sears and Tom Brent W/ NAVFAC are both ok about how the site was left. 1330: Tim Sears w/ NAVFAC stopped by a seen the proof rolling HIS was doing with the Hanna trucks and he is ok with our compaction in the blacktop and rail area that's almost completed. 1430: Terry Knecht w/ HIS departs site. The other two crew members finished what was left to be done. They continued putting in 1' lift and rolling in, repair of silt fence in theM2 area and putting up outer snow fence and signage. 1600: Site is secured with HIS (2) Crew members and Mike Tuttle w/L&R departs site. • Tim Sears w/ (NAVFAC) was onsite a several times during the day. Tom Brent (NAVFAC) stopped by twice. • HIS switched buckets on excavator every time they switched from clean to dirty soil. • Hanna Trucking had 16 trucks on site today. • Hanna Trucking hauled 330.29 total tons today.

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS

A 2ND 4'' line was found on the west side of building 146 during excavation. This will be capped per NAVFAC approval.(Pictures taken and location mark put on the wall) This is the 3rd line that has been located . All lines that are located to the west of building 146 are to be capped per NAVFAC. Tim Sears w/ NAVFAC notified Mike Tuttle w/L&R once again that all bathrooms in building 146 are plumbed into the wastewater line the south end of the building.

Delay with Hanna trucking due to the weather. Only one trip was able to be done with the backfill being frozen to the beds and soil being frozen to the beds at the landfill. It also was decided by L&R,HIS & NAVFAC that we won't have any trucks deliver or load out tomorrow due the same issue will arise due to the weather.

WORK PERFORMED PER SHIFT

TASKS:	0700: Mike Tuttle arrived for L&R/, Crew of (3) from HIS. Safety tailgate meeting and the crew(s) signs the daily HASP. Discussed safety around moving equipment and trucks (16 trucks on site), frostbite, silp and falls (snow and ice on the ground/equipment), and over head objects power lines Etc. Sump pump was left to run over the night to keep up with the water in the temporary sump that HIS put in. 0715: Mike Tuttle w/ L&R and personnel w/ HIS went over the days activity's. 0830: Hanna Trucking starts arriving with (16) trucks bringing 53 stone and hailing out contaminated soil. Rotation continues same with 5 trucks at a staggered time of 20 miniutes. HIS starts loading the truck with contaminated soil from the southern area of the site. HIS also continues excavated down to bedrock and backfilling in 1' lift and rolling in #2 & 53 stone (50/50 mix) and being put under the rail area. The 53 stone is being used in all other areas and rolled in 1'' lifts. Delays due to small snow storm in the area. Trucks running a little behind and some of the trucks where having the 53 stone is freeze to their beds and HIS is scraping the beds out with the clean excavator bucket. 1100: The last of the Hanna trucks departs from site for their 1st trip. HIS continues backfilling in 1' lifts and rolling in. The #2 & 53 stone being mixing 50/50 and put under rail area. The 53 stone being used everywhere else. 1130: A 2ND 4'' wastewater line was found on the westside of building 146 during excavation. This will be capped per NAVFAC approval.(Pictures taken and location mark put on the wall) This is the 3rd line that has been located . All lines that are located to the west of building 146 are to be capped per NAVFAC. Tim Sears w/ NAVFAC notified Mike Tuttle w/L&R once again that all bathrooms in building 146 are plumbed into the wastewater line the south end of the building. 1200: Mike Tuttle w/L&R met with Tim Sears w/NAVFAC about the 3rd wastewater line was found and Mike Tuttle w/ L&R wanted to make it is be capped. Once again Tim Sears w/ NAVFAC assured Mike Tuttle w/L&R that all lines are to be capped that HIS finds during excavation. 1300: Dan Clingan w/HIS departed site. 1315: Mike Tuttle w/L&R called Bruce w/ Hanna trucking to see if any trucks will be able to return due to the delays in nthe a.m. Hanna notified Mike Tuttle w/L&R that most of the trucks are still at the landfill trying empty their beds(soil frozen to the beds). That none of the trucks will return for the their 2nd trip. This along with the delays in the morning is delaying us. 1415: It was decided by L&R,HIS that we won't have any trucks deliver or load out tomorrow due the same issue will arise due to the weather. HIS finished the day backfilling and rolling in lifts and then covering up the excavated edge and trench between contaminated soil and clean backfill to be left over the weekend. HIS ran out of plastic and will finish 1st thing in the morning. 1600: Site is secured with HIS (3) Crew members and Mike Tuttle w/L&R departs site. • HIS switched buckets on excavator every time they switched from clean to dirty soil. • Hanna Trucking had 16 trucks on site today. • Hanna Trucking hauled 321.67 total tons today.

Description:

2nd 4'' wastewater line that was located. Three wastewater lines found total so far coming out of building 146.

Reference picture to show loacation of wastewater line and also mark on the wall.

Description:

HIS continuing where they left off excavating the southern area and loading trucks.

Description: **HIS putting 1' lifts in the completed excavation areas.**	
The end of the day. Rail area up to grade with 53/#2 stone(50/50 mix) up to the furthest excavation area so far.

LIST SAFETY/PERMIT/QC ACTIONS TAKEN PER SHIFT / INSPECTIONS CONDUCTED	FOLLOW UP MEASURES REQ'd
Onsite tailgate meeting w/HIS to go over PPE/safety around moving equipment and trucks, slip and falls (ice and snow on ground), frostbite, overhead objects, power lines, etc.	N/A
Crew(s) signed L&R daily health and safety sheet for our file.	N/A

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS

While B&D was drilling the hole for the pole there was water about four feet down and was believed it was due to the steam line leak. Tom Brent w/NAVFAC didn't want water pumped into the wastewater/storm drain due to the heavy silt in the water. Tom also didn't want the water pumped on to the ground due to possible contamination in the water. Tom Brent w/ NAVFAC notified Mike Tuttle w/L&R that if it was okay with B&D Electric, he would like the pole put in without pumping any water out. Mike Tuttle w/ L&R talked to the crew with B&D Electric and they were okay with that. Kevin Losekamp w/Tetra Tech took a water sample and it will be sent to the lab.

Mike Tuttle w/L&R talked to Tim Sears w/NAVFAC about making sure we are not missing any grounds coming off of Building 146 that will need to be tied into the grounding loop for the lighting rods. Tim will be getting ahold of someone with the base to come out and help us with this tomorrow.

WORK PERFORMED PER SHIFT	
TASKS:	0830: B&D Electric arrives to drill hole for the new lighting rod pole that will be installed. Old one was taken out during excavation. 0930: Crew of (2) from B&D Electric and the crew of (3) from HIS arrive; safety tailgate meeting and the crew(s) signs the daily HASP. Discussed safety around moving equipment and trucks (5 trucks on site), slip and falls (snow and ice on the ground/equipment), and over head objects power lines, etc. Mike Tuttle w/ L&R and personnel w/ both crews went over the days activity's. B&D starts drilling 12' deep hole for the new pole to be installed. There's a lot of water in the hole starting about 4' down. We believe it's due to the steam line leak. See notes above in the remarks. HIS continues backfilling what little is left to do and loading out the last few trucks. 1120: Mike Tuttle w/ L&R met with Tom Brent w /NAVFAC about water that's in the hole that B&D was drilling. See notes above in the remarks. 1100: B&D finishes drilling hole and they only go to 11' due to the bedrock. Tony Blessinger w/ B&D said this will be deep enough and the pole will be secure. Tim Sears w/ NAVFAC was okay with this also. 1200: HIS helped B&D move pole over to the place to where it is to be installed and finished prep of putting the copper line all the way up the pole. The pole will be put in tomorrow. 1300: The last of the Hanna trucks bring in the 53s for backfill. There where 5 trucks on site and 3 trucks came back a 2nd time to bring backfill. 1400: B&D finished for the day and departs site. HIS also starts cleaning the tracks on the excavator. A decontamination pad was put down to collect all the solid dry soil upon. HIS also concludes rolling in the last little bit of backfill. Mike Tuttle w/L&R and HIS crew of (3) finished the rest of the day cleaning all of the solids out of the tracks of the excavator. 1730: Site is secured with HIS (3) Crew members and Mike Tuttle w/ L&R departs site. • Tim Sears w/ NAVFAC was onsite a several times during the day. Tom Brent w/ NAVFAC stopped by once, • Hanna Trucking had 5 trucks on site today, • Hanna Trucking hauled 88.59 total tons today.

Description: **HIS loading the last of the contaminated soil.**	
Excavator bucket being decontaminated after the last last truck loaded.	

Description:

B&D Electric start drilling the hole for the new lighting protection pole.

Description: **The water in the hole that B&D Electric drilled for new pole. The water begins about 4' down.**	
HIS cleaning the material out of the excavator tracks with existing decontamination pad under excavator.

Inspection of the pole after it was installed by Mike Tuttle w/L&R.	N/A
Kevin Losecamp w/ Tetra Tech okay's the decontamination job done on the excavator.	N/A

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS
Kevin Losecamp okayed the decontamination job done on HIS excavator. Kevin also took a soil sample under the decontamination pad.

WORK PERFORMED PER SHIFT	
TASKS:	0700: Mike Tuttle arrived for L&R, crew of (3) B&D Electric and a crew of (3) from HIS. Safety tailgate meeting and the crew(s) signs the daily HASP. Discussed safety around moving equipment and, slip and falls (snow and ice on the ground/equipment), and overhead objects power lines, etc. 0800: Lugwig Crane Service arrives to upright the pole and put it in predrilled hole. Tailgate meeting also held for the crane and the B&D crew that's installing new 100' pole. HIS continues wiping down the excavator with Liqinox and water. HIS also cleaning up site. 0930: B&D concludes the installation of the 100' pole and they clean up their work area and depart site by 1000. B&D will be back next week to install the grounding grid wires that where evcavated during project. We loaded what was taken off the excavator into trash bags and put it in the L&R truck and Mike Tuttle will take a manifest to the landfill to be deposed of. Kevin Losecamp w/ Tetra Tech okay's the cleaning job done on the excavator. HIS cleaned up the site. 1115: Site is secured with HIS (2) Crew members and Mike Tuttle w/L&R departs site. • Tim Sears w/ (NAVFAC) was onsite a several times during the day. Tom Brent (NAVFAC) stopped by once. • Mike Tuttle w/L&R and Nate Rollins w/HIS drove L&R truck #41 to the Rumpke dump to depose of the dry soil that was removed from HIS's excavator. Kevin Losecamp gave Mike Tuttle w/L&R the manifest to take it to the Rumpke dump and Rumpke was okay with us bringing it to them in a pickup truck. Paperwork forwarded to Kevin Losekamp w/ Tetra Tech. • There was .78 of a ton removed and cleaned off of HIS's excavator and taken to the landfill.

Onsite tailgate meeting w/HCI to go over PPE/Safety around moving equipment and trucks,slip and falls (ice and snow on ground), frostbite, overhead objects, power lines Etc.	N/A
Crew(s) signed L&R daily health and safety sheet for our file.	N/A

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS
Tim Sears w/NAVFAC notified Mike Tuttle w/L&R that L&R has until the end of April to complete the project do to all the delays with extreme low temperatures.

WORK PERFORMED PER SHIFT

TASKS:	0800: Mike Tuttle w/L&R and HCI with a crew of 3 arrived and Held a safety tailgate meeting with the crew and they sign the daily HASP. Discussed safety around moving equipment, PPE, silp and falls (snow and ice on the ground/equipment), and over head objects power lines Etc. 0805: HCI finished preparations of the forms and then covered up the step area with concrete blankets and started to run a air forced heater to help warm up the concrete. Crew awaiting the arrival of IMI to arrive to pour the steps. 0930: The IMI concrete truck arrived to pour the steps. 1015: The IMI truck concluded the pouring, cleans the truck and departs the site. The rest of the day is HCI crew constantly adjusting the forms, addeding bracing to help hold the weight of the concrete and finishing the concrete over and over. With the low temperatures, the concrete was taking a very long time to set and needed a lot of attention. HCI worked on the finishing for the next four hours. 1400: Mike Tuttle w/L&R and HCI crew departs site. HCI has another job on base and they will stop back by thoughout the rest of the day and make sure the concrete is setting up ok. When the concrete is ste up enough, HCI will finish the steps with bruching them. • Tim Sears w/ NAVFAC stopped by site three times during the day. • HCI had built the forms for the curbs for the tunnel off site and delivered them to the site.

Description: **Heating the concrete before the concrete truck arrives.**	
Rebar and #9 wire mech being used in the steps.	
Description:
Pouring and working the concrete.

Description: **Putting extra supports to hold the weight of the concrete.**	
Description : **2x4's was attached to the 2x6's to keep them from bowing.**	

DFoW	CONTRACTOR QUALITY CONTROL REPORT (ATTACH ADDITIONAL SHEETS)	REPORT NO.	DATE
Pouring concrete for the steps for access the loading dock of building 146.		24	13FEB14

PHASE	Y=YES, N=NO, SEE REMARKS; BLANK-NOT APPLICABLE		
PREPARATORY	THE PLANS AND SPECS HAVE BEEN REVIEWED	Y	HCI poured the steps to access the loading dock for building 146. Mike Tuttle w/L&R Held a tailgate safety meeting and crew(s) signed HASP. Slip and fall with the ice & snow on the ground/equipment, PPE, safety with power tools. *Performed on 13-FEB-14*
	THE SUBMITTALS HAVE BEEN APPROVED.	Y	
	MATERIALS COMPLY WITH APPROVED SUBMITTALS.	Y

Onsite tailgate meeting w/HCI to go over PPE/safety operations around moving equipment and trucks,slip and falls (ice and snow on ground), overhead objects including power lines.	N/A
Crew(s) signed L&R daily health and safety sheet for our file.	N/A

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS
All-track will be mobilizing the site March 4th to begin re-installation of rail spur. Tim Sears was notified by Mike Tuttle w/ L&R of current scheduling plans, so the Army building staff could be notified.

WORK PERFORMED PER SHIFT	
TASKS:	0800: Mike Tuttle w/L&R and HCI with a crew of (3) arrived and conducted tailgate meeting. Discussed safety around moving equipment, PPE, silp and falls (snow and ice on the ground/equipment), and over head objects - power lines, etc. 0810: HCI starts setting forms for the foundation on the west side of tunnel. HCI crew set up and adjusted the forms, placed bracing supports to help reinforce the forms against the weight of the concrete. 1330: HCI finishes setting up the forms and breaks for lunch. 1420: IMI Concrete truck arrived and HCI started pouring foundation. Crews use portable concrete vibratory tool during pour to eliminate voids. 1600: HCI completes the finishing of concrete and adjusting of the forms. The forms will left in place for one or two days depending on the weather. 1630: Crew and Mike Tuttle w/ L&R secures and departs site. • Tim Sears w/ NAVFAC stopped by site three times during the day.

Description: **The start of the day by putting in the pre-fabricated forms in place.**	

Description:

The forms completely set up and in place and ready for concrete.

The start of the pouring.

Description: **Vibratory tool in action.**	
Description : **Completed foundation.**

WORK PERFORMED PER SHIFT	
TASKS:	0730: Mike Tuttle w/L&R and HCI with a crew of (3) arrived onsite and conducted safety tailgate meeting. 0800: HCI started taking down the forms used for the west side curb and started building the forms for the east side tunnel foundation. 0900: HCI crew adjusts the forms for alignment, adds additional bracing to hold the weight of the concrete. 1045: HCI uses mini excavator to push stone back up against both sides of the west wall 2' high to help support the weight will curing. 1230: HCI finishes setting up the forms. Takes lunch break. 1345: The IMI Concrete truck arrived and HCI started pouring the east side foundation of the tunnel. During the pour it started raining, once complete HCI covered the concrete wall with protective blankets. 1615: HCI completes the finishing of concrete and adjusting of the forms. The form will be left in place until the following Monday. 1630: The crew of (3) w/ HCI and Mike Tuttle w/ L&R secures and departs site. • Tim Sears w/ NAVFAC stopped by site three times during the day.

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS

Bob Lloyd w/ NAVFAC stopped by the site to test the grounding loops that B&D installed before back filling.

After the grounding loop was put in and tested. The compaction was done with a Bomag rammer in the areas trenched by B&D Electric.

WORK PERFORMED PER SHIFT

TASKS:	0730: Mike Tuttle w/L&R, HCI with a crew of (3) and B&D Electric w/ a crew of (3) arrived. Mike Tuttle w/L&R held a safety tailgate meeting with the crews and they sign the daily HASP. 0800: HCI starts taking forms down from the east side curb and prepping for the pouring of the floor (slab) of the tunnel. B&D starts trenching for installation of the ground wires for grounding loop for the lighting protection. 1130: B&D finishes connecting all the grounding wires. B&D installed new grounding wire all along the west side of the dock for building 146 and attaching all the ground wires coming from the building. The new grounding wire was installed all along the the west side of the building starts at the farthest excavation area to the south all the way to the corner of the building by the steps for the primary. Then B&D also trenched to the the new lighting rod pole to existing lighting rod pole. New lighting rod pole was put in by B&D Electric a few weeks ago. All of the grounds leads were tied in together. The paint building to the north of building 146 was also trenched to and grounding wire attached. Lighting rod and the grounding wire for the paint building is part of the secondary grounding loop. There was also two ground leads left for both rails, one for the tunnel and railing for the steps. B&D also also put in (2) access point where they installed grounding rods so that the grounding loop can be tested in the future. Two small sections of 8'' sch 40 pvc pipe w/ lids was used to access these (2) grounding points. (pictured below) 1200: Bob Lloyd w/ NAVFAC arrived to tests the grounds to make sure the grounding loop is all connected and complete before back filling. All of the testing came out good. After testing, B&D started back filling and compacting of the areas that where trenched for the grounding loop. Compaction was done Bomag rammer.(pictured below) HCI continued to prep the area for the floor of the tunnel by putting in stone and compacting up to grade with a single direction plate compactor. HCI also put in expansion joints at both ends and along the sides. The slab will be 6'' thick per. specs. 1500: B&D Electric completed back filling and compaction and crew of (3) departs site. 1600: HCI finished the preperations for the floor (slab) for the tunnel and covered up the the area with concrete blankets. The floor will be poured 1st thing in the morning. 1600: The crew of (3) w/ HCI and Mike Tuttle w/ L&R secures and departs site. • Tim Sears w/ NAVFAC stopped by site serveral times during the day.

Description:

The two access points for the grounding rod that where installed.

The grounding rods being driving into the ground with a attachment for a jack hammer.

Description:

The trench along the west side of the buildings dock. (Primary line)

The trench for the secondary line that connects the lighting rod poles.

Description: **The trench for the secondary line that's goes to paint building.**	
A Bomag rammer being used to compact the area under the rail area. This was used in all the areas that B&D trenched.	

Description: **The floor of the tunnel being compacted and put up to grade for concrete.**	
Description : **The completed steps.**

WORK PERFORMED PER SHIFT

TASKS:	0730: Mike Tuttle w/L&R and HCI with a crew of (3) arrived and Held a safety tailgate meeting with the crew and they sign the daily HASP. Discussed safety around moving equipment, PPE. 0830: HCI puts wire mesh in for the floor of the tunnel as the IMI concrete truck arrives. HCI starts the pour of the tunnel floor. 0915: HCI concludes the pouring of the floor and the IMI truck washes out and departs site. HCI works on the finishing of the concrete for the next couple hours. 1100: HCI concludes the finishing of the concrete except the brushing of the concrete. 1200: HCI brushes the concrete and the crew of (3) w/ HCI and Mike Tuttle w/ L&R secures and departs site. • Tim Sears w/ NAVFAC stopped by site three times during the day.

Description:

The start of the pour for the floor of the tunnel.

Description:

The pouring of the floor of the tunnel.

The start of the finishing of the concrete.

Description: **The floor finished except the brushing.**	
Description : **Pictured is just a reference to where the ground rod access wells are located.**	

DFoW	CONTRACTOR QUALITY CONTROL REPORT (ATTACH ADDITIONAL SHEETS)	REPORT NO.	DATE
Pouring concrete floor for the tunnel on building 146.		27	25FEB14

PHASE	Y=YES, N=NO, SEE REMARKS; BLANK-NOT APPLICABLE		
PREPARATORY	THE PLANS AND SPECS HAVE BEEN REVIEWED	Y	HCI had set up forms, put expansion joints and then poured the concrete for the floor of the tunnel for building 146. Mike Tuttle w/L&R Held a tailgate safety meeting and crew(s) signed HASP. Safety around moving equipment, PPE, safety with power tools. *Performed on 25-FEB-14*
	THE SUBMITTALS HAVE BEEN APPROVED.	Y	
	MATERIALS COMPLY WITH APPROVED SUBMITTALS.	Y	
	MATERIALS ARE STORED PROPERLY.	Y	
	PRELIMINARY WORK WAS DONE CORRECTLY.	Y	
	TESTING PLAN HAS BEEN REVIEWED.	Y	
	WORK METHOD AND SCHEDULE DISCUSSED	Y	
	SAFETY MEASURES REVIEWED – DISCUSS AHA's	Y

Onsite tailgate meeting w/HCI to go over PPE/Safety around moving equipment	N/A
Crew(s) signed L&R daily health and safety sheet for our file.	N/A

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS
Engineer w/ NAVFAC notified Josh Harrell w/ HCI that wanted structural bracing welded on both side of the steel frame to make the frame more rigid.Tim Sears w/ NAVFAC notified Mike Tuttle w/ L&R that was unnessasary. Josh w/ HCI said their going to at least put the bracing on one side due to the Steel frame structure not being straight from side to side.

WORK PERFORMED PER SHIFT

TASKS:	0800: Mike Tuttle w/L&R and HCI with a crew of (3) arrived and Held a safety tailgate meeting with the crew and they sign the daily HASP. Discussed safety around moving equipment, PPE. 0805: HCI starts setting frames in place with their Lull and bolting the sections back together. Tim Sears w/ NAVFAC wanted HCI to replace all the original bolts that's on the sides because the bolt heads have very large heads and when HCI installs the steel siding up they will make the siding bow out where each bolt are located. So HCI ordered carrage bolts which have much smaller heads.The frame is fastened to the concrete w/ ¾ in. tap con concrete bolts. HCI pre-drills the holes in the concrete curbs then put the tap con concrete bolts in with a impact. HCI are using large rachet straps to get the frame straight so tomorrow HCI will weld the corner bracing into place. Tap con concrete bolts where approved by NAVFAC engineer. 1445: HCI finishes for the day and will install the rest of the carrage bolts tomorrow (waiting on the rest the carrage bolts to come in) and weld the corner bracing in place. The install of the steel siding will start on Monday. 1500: The crew of (3) w/ HCI and Mike Tuttle w/ L&R secures and departs site. • Tim Sears w/ NAVFAC stopped by site several times during the day. • AllTrack will start the install of rail road ties and the rail on Monday as long as the ground thaws out.

Description:
HCI starting to put the old frame back in place.

Description:	
Steel frame for the tunnel in place.

WORK PERFORMED PER SHIFT

TASKS:	0800: Mike Tuttle w/L&R and HCI with a crew of (3) arrived and Held a safety tailgate meeting with the crew and they sign the daily HASP. Discussed safety around moving equipment, PPE. 0805: HCI started to weld the angle iron in the corners of the steel structure for the tunnel so that the tunnel will straight and can't give side to side. HCI also got the rest of the carrage bolts in that go on the side of the steel structure so that the steel sheet metal will lay flat. The two legs by the steps where rusted out, so HCI cut the old feet off and replaced with new steel legs.(pictured below) 1300: The crew of (3) w/ HCI and Mike Tuttle w/ L&R secures and departs site. • Tim Sears w/ NAVFAC stopped by site several times during the day. • AllTrack will start the install of rail road ties and the rail on Monday as long as the ground thaws out.

Description:

Pictured: The angle iron that HCI installed at each joint. Used to keep structure from side to side.

Description:	
The two legs by the steps where rusted off. HCl replaced.

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS
Mike Tuttle w/ L&R contacted Tony Blessinger w/ B&D Electric about reconnecting the lights in the part of the tunnel that was taken down. Tony will stop by tomorrow and see what all he needs to reinstall lights.

WORK PERFORMED PER SHIFT

TASKS:	0800: Mike Tuttle w/L&R and HCI with a crew of (4) arrived and Held a safety tailgate meeting with the crew and they sign the daily HASP. Discussed PPE. 0805: HCI started to started install of G-Rib steel siding for the roof for the tunnel. Josh Harrel w/ HCI used a safety harness when on the roof. 1200: HCI finishes the install of the roof and took lunch. Josh Harrell left and his crew of (3) finished the day. 1230: HCI starts install of G-Rib steel siding on the west side of the tunnel and using closure strip where the roof and sides meets.(pictured below) All Track will start tomorrow on install of rail and ties so HCI will get the west side done today to be out of All Tracks way tomorrow. 1645: HCI finished for the day. 1700: The crew of (3) w/ HCI and Mike Tuttle w/ L&R secures and departs site. • Tim Sears w/ NAVFAC stopped by site several times during the day. • AllTrack will start the install of rail road ties and the rail tomorrow morning.

Description:

The start of the day with the install of the roof.

Tunnel ceiling completed.

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS

HCI returned at 1600 to pour the concrete for the repair on the dock by the steps that were replaced during the project. Mike Tuttle w/ L&R observed, noted repair efferts and took pictures; however, it was not part of the L&R contract. The Army subcontracted HCI directly and charged it to a credit card.

When All Track arrived on site the forman (Layne Dobbs) noted there was stone pilled up against the west side of the tunnel impeading his portion of the the project work. This stone was left in place to support the freshly poured concrete footing for the tunnel. Therefore, All Track pulled the stone back to grade with the back hoe before they started laying the railroad ties. While All Track was pulling the stone back from the concrete of the walkway, the operator hit the new metal siding of the tunnel and dented it in a couple places. HCI evaluated the damage and stated they maybe able to be fix the damage. Tim Sears w/NAVFAC was notified of the incident by Mike Tuttle w/ L&R.

WORK PERFORMED PER SHIFT	
TASKS:	0800: Mike Tuttle w/L&R and HCI with a crew of (3) arrived at the Site and held a safety tailgate meeting with the crew and they signed the daily HASP. The safety meeting included a discussion on safety around moving equipment and proper PPE. 0815: HCI started the finishing of the install of G-Rib steel siding for the east side of tunnel. 0900: All Track arrives and Mike Tuttle w/ L&R hold a tailgate meeting and crew signs the daily sign in sheet and the crew starts installing ties and rail. 0930: Tony Blessinger w/ B&D Electric arrives assess what will be needed to reconnect lights in the tunnel. Tony departs at 0945. B&D Electric will have someone here later today to hook the lights up. 1200: HCI finishes the install of G-Rib siding on the east side and took lunch. All Track also went to lunch. HCI came back after lunch to clean up site. There are just a couple small things left to be done to finish the tunnel. HCI is awaiting arrival of base angle to attach the metal siding at the bottom on the inside of the tunnel, which should be delivered this week. The rails for the steps are being fabricated today. 1245: B&D Electric arrives with (1) crew member to start the running of the power wire for the lights and install of the lights. B&D also connected the ground lead to the tunnel coming from the grounding loop. 1400: HCI departs for the day. 1500: B&D finishes with the install of the wire and lights and departs site. Mike Tuttle w/L&R went to Fastenal and picked up light bulbs for the tunnel and put the bulbs in the (3) light fixtures. 1630: All Track and the crew of (5) finishes for the day and departs site. 1700: Mike Tuttle w/ L&R secures and departs site. • Tim Sears w/ NAVFAC stopped by site several times during the day.

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS

Josh Harrel w/ HCI waited a ok to make the safety rails for the steps out of steel or aluminum. Mike Tuttle w/ L&R confurmed w/ Josh Harrel to make rails out aluminum so the rails last longer. All the other rails on base that are steel seem to rust at the base where they bolt to the steps. Mike Tuttle ask Tim Sears w/ NAVFAC if he still wanted them painted yellow. Tim checked with his safety officer and they are not to be painted.

Mike Tuttle w/ L&R checked the lights that B&D Electric installed yesterday to see if they are working okay 1st thing this morning before sunrise. The three lights are working fine.

WORK PERFORMED PER SHIFT

TASKS:	0800: Mike Tuttle w/L&R and All Track Inc. with a crew of (6) arrived and Held a safety tailgate meeting with the crew and they sign the daily HASP. Discussed safety around moving equipment, PPE. 0815: All Track Inc. continues from where they stopped yesterday installing new RR ties and reusing the old rail. 0900: All Track Inc. arrives and Mike Tuttle w/ L&R hold a tailgate meeting and crew signs the daily sign in sheet and the crew continues the installing of ties and rail. 1200: All Track's crew took a lunch brake. By mid afternoon, All Track Inc.had the east side of the rail in place and was still installing plates and spikes. 1500: All Track Inc. set the west side rail up on to the RR ties and started setting in place. 1615: All Track Inc. finishes for the day and put equipment away. 1630: All Track Inc. and the crew of (6) finishes for the day and departs site. 1700: Mike Tuttle w/ L&R secures and departs site. • Tim Sears w/ NAVFAC stopped by site several times during the day.

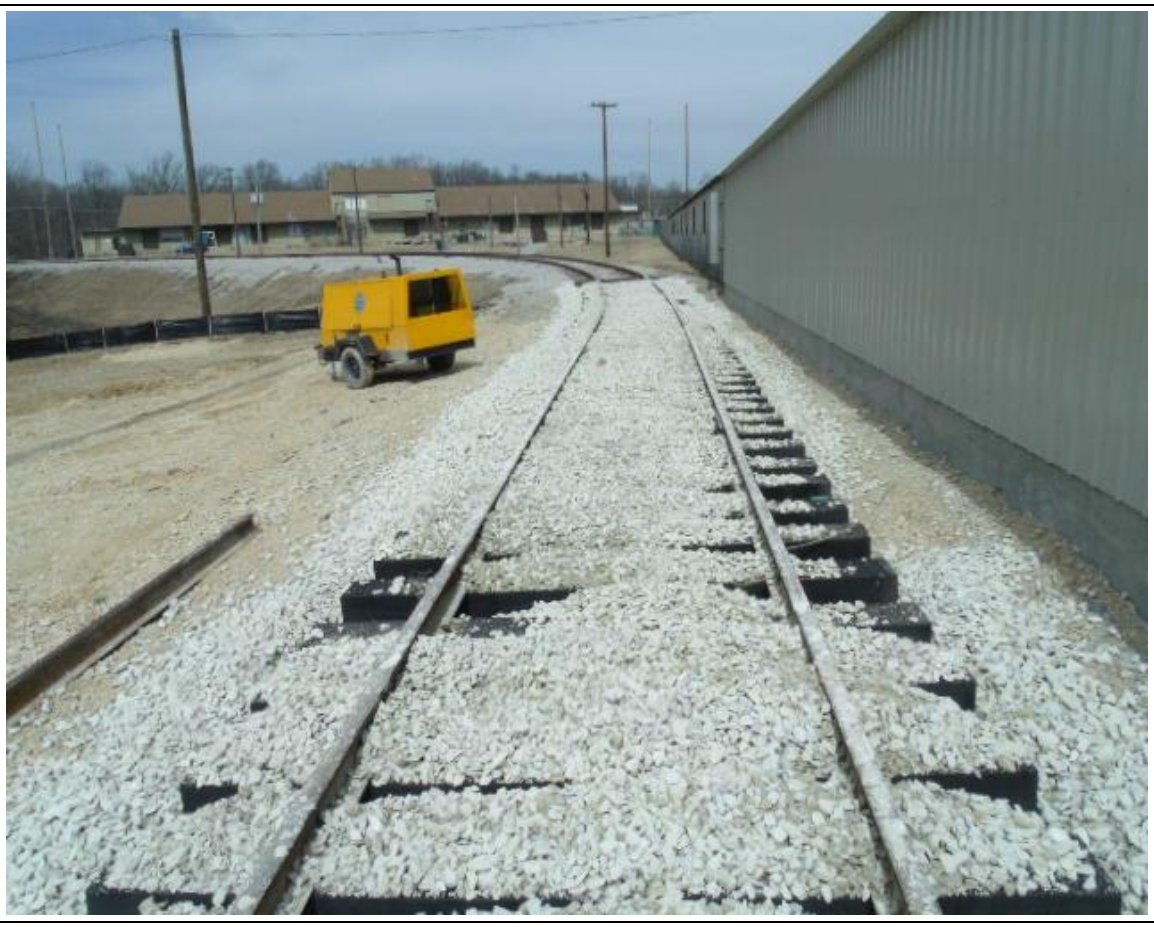
Onsite tailgate meeting w/ All Track and HCI to go over PPE/Safety around moving equipment	N/A
Crew(s) signed L&R daily health and safety sheet for our file.	N/A

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS
All Traclk Inc. isn't completely done. They still have work in the ballest under the RR ties and level out the rails. This will done on Monday and since the biggest part of the track being repaired/ install isn't part of the L&R project, Tim Sears w/NAVFAC notified Mie Tuttle w/ L&R that there is no need for Mike to be here on Monday. Mike Tuttle will take pictures during his next visit.

WORK PERFORMED PER SHIFT

TASKS:	0800: Mike Tuttle w/ L&R and All Track Inc. with a crew of (4) and a crew of (2) w/ HCI arrived and Held a safety tailgate meeting with the crew and they sign the daily HASP. Discussed safety around moving equipment, PPE. 0815: All Track Inc. continues from where they stopped yesterday installing rail, plates, spikes and making adjustments where it's needed. HCI finishes installing the angle bracing.The angle iron bracing gets fastened to the concrete curgs then the G-Rib gets fastened to the the angke iron at the the bottom of the walls. HCI also started installing the hand rails for the steps also. 1100: All Track's Inc. bring in a dump truck on the RR and starts spreading the ballast out over the track area. This later will be worked in under the RR ties.(pictured below) 1200: All Track Inc. crew takes lunch and only (1) crew member returns and continues putting the ballest down. So at this time Mike Tuttle w/L&R takes All Track off his time sheet due to All track (1) crew member is working on the areas that don't include the L&R project. The entire rail area is being done all at once and the L&R section is a small part of the work. 1230: HCI finishes the install of the safety rails for the steps and fastening the G-Rib siding the angle iron. The safety rails where installed by drilling hole in the concrete and concreting the rails in with anchoring cement. (pictured below) 1300: HCI cleans up there work area including the sweeping of the tunnel and they also load up all of the scrap metal that's been collected during the project and are going to recycle the steel. 1330 : Mike Tuttle w/ L&R and the (2) crew members w/ HCI secures and departs site. • Tim Sears w/ NAVFAC stopped by site several times during the day.

Description:
All Track starting to spread the ballest out.



Description:	
HCl installing the angle iron.	
HCl drilling the holes for the rails.	

Description: **The safety rails being installed.**	
The safety rails installed and completed.	
DFoW	CONTRACTOR QUALITY CONTROL REPORT (ATTACH ADDITIONAL SHEETS)	REPORT NO.	DATE
All Track Inc. continues the install of rails, plates and spikes. Start putting the ballast down.		33	14MAR14

PHASE	Y=YES, N=NO, SEE REMARKS; BLANK-NOT APPLICABLE		
PREPARATORY	THE PLANS AND SPECS HAVE BEEN REVIEWED	Y	All Track Inc. continues the install of existing rails, plate and new spikes that goes to building 146. All Track Inc. also start putting the ballast down. Mike Tuttle w/L&R Held a tailgate safety meeting and crew(s) signed HASP. Safety around moving equipment, PPE, safety with power tools. *Performed on 14MAR-14*
	THE SUBMITTALS HAVE BEEN APPROVED.	Y	
	MATERIALS COMPLY WITH APPROVED SUBMITTALS.	Y	
	MATERIALS ARE STORED PROPERLY.	Y	
	PRELIMINARY WORK WAS DONE CORRECTLY.	Y	
	TESTING PLAN HAS BEEN REVIEWED.	Y	
	WORK METHOD AND SCHEDULE DISCUSSED	Y	
	SAFETY MEASURES REVIEWED – DISCUSS AHA's	Y	

PHASE	Y=YES, N=NO, SEE REMARKS; BLANK-NOT APPLICABLE			TESTING PERFORMED & WHO PERFORMED TEST
INITIAL	PRELIMINARY WORK WAS DONE CORRECTLY	Y	Continuing the install of rails, plates and spikes. *Performed on 14-MAR-14*	Testing will be required at the end of the install. Checking the spacing between the two rails. That spacing is 53 ½'' in the curve and 53 ¾'' in the straightaway and is measured as the rail is installed at each tie.
	SAMPLE HAS BEEN PREPARED / APPROVED.	Y		
	WORKMANSHIP IS SATISFACTORY.	Y		
	TEST RESULTS ARE ACCEPTABLE.	Y		
	WORK IS IN COMPLIANCE WITH THE CONTRACT.	Y		
	SAFETY MEASURES REVIEWED – DISCUSS AHA's	Y		

PHASE	Y=YES, N=NO, SEE REMARKS; BLANK-NOT APPLICABLE		.	TESTING PERFORMED & WHO PERFORMED TEST
FOLLOW UP	WORK COMPLIES WITH CONTRACT AS APPROVED IN INITIAL PHASE.	Y	*Completed on 14-MAR-14*	A locomotive will be used for testing at the end of the install by running the locomotive over the reinstalled rail area. The spacing in between the rails are 53 ½'' in the curve and 53 ½'' in the straightaway and a measurement is taken at each tie.
	All Track Inc. continues the install of rails, plates and spikes.

Section 10.4

Crane Inspection Process

Before a crane is operated or transported, it must be thoroughly inspected by the operator. The Crane Operator's Daily Checklist lists each area to be inspected.

The operator visually inspects and checks off each item prescribed on the checklist. When the operator observes a deficiency of a load-bearing or load-controlling part of the crane, or a deficiency in a safety device, or an operating condition that would otherwise cause the slightest loss of control or otherwise render the crane unsafe, the operator must secure the crane and notify the his supervisor. The Checklist incorporates items to be checked during the crane pre-start inspection. The Checklist is turned in to the crane crew supervisor at the end of each day or shift for reviewing and signing. Copies are kept by the company, in compliance with regulations pertaining to records retention.

- Examples of the types of information collected for the Daily Checklist include: Crane #
- Location/Assignment
- Date
- Starting and Ending Hour Meter Readings,
- Names of Operator and Signalman

The Checklist inspection includes operating and safety equipment. The items are marked either Satisfactory (S) or Unsatisfactory (U). Some of the items checked include:

- Engine Oil Level
- Fan Belts
- Fuel Oil Levels
- Indicator Gauges and Lights
- Limit Switches
- Wire Rope
- Brakes
- Radiator
- Warning Devices
- Walkways
- Ladders
- Handrails
- Glass, Hooks
- Housekeeping
- Lubrication
- Locks
- Chocks
- Stops
- Controllers
- Motors
- Lights
- Tanks (oil and air)
- Air Compressor
- Batteries
- Tires
- Wheels

Onsite tailgate meeting w/HIS to go over PPE/safety around moving equipment, slip and falls (uneven ground surface), overhead objects, power lines, etc.	N/A
Crew(s) signed L&R daily health and safety sheet for our file.	N/A

REMARKS / UNRESOLVED ISSUES / ANY SCHEDULE IMPACTS / PROJECT DELAYS
Tim Sears discussed the current condition of the site and drives used to complete site work. Tim requested gravel placement and general repairs to the access drives. Tim stated the area north of the asphalt placement (former north settling basin) and former east settling basin could be filled to grade with gravel.

WORK PERFORMED PER SHIFT	
TASKS:	0800:R. Scott Powell w/ L&R and Nate with HIS arrive on site. 0810: HIS and L&R held a safety tailgate meeting. Discussed safety around moving equipment, PPE, slip and falls (uneven ground surface), and overhead objects power lines, etc. 0820: HIS began excavating and grading the N. TCE asphalt replacement area. 0830: Tim Sears arrived on-site to discuss site conditions and todays objectives. 0835: Lanny Dobbs arrives on site to deliver daily reports and inform L&R that the Crane railroad personnel and NAVAFC have accepted railroad resoration conditions. Tim confirmed acceptance of railroad. 0840: Tim left site. 0915: Tim arrives on site to review site conditions. Tim requested the following actions: • Grade drive south of Building 146; • Grade drive to M3 excavation area (outside of fenced area); • Grade entire west parking lot to address ruts from truck traffic; and • Topsoil and seed west lot, north of sewer manhole. 0930: Tim left the site. 1210: Tim arrives on site to request meeting between L&R and NAVFAC to discuss contract change orders. Tim also stated the area north of the asphalt replacement area can be left as gravel and did not require topsoil and seeding. 1400: L&R (R. Scott Powell) and NAVFAC (Debbie Dills and Tim Sears) met to discuss the last two change orders (RFC005 and RFC006). After discussions on production loss due to weather conditions, NAVFAC approved both RFCs as-is. 1715: HIS finishes for the day performs cleanup and put tools away. 1730: Site is secured and HIS and L&R depart site.

Description: **Excavation and grading of asphalt restoration area north of Building 146.**	
Graded area for asphalt restoration north of Building 146.	

Description:

Gravel area, north of asphalt restoration area (former settling basin area).

East settling basin area, graded.

Subject: **Asbestos Abatement Project Management Final Closeout Report**
Building No. 146 Tunnel
300 Highway 361
Crane, Indiana 47522
Cardno ATC Project No. 086.45081.0001

Dear Mr. Powell:

Cardno ATC is pleased to submit the following Asbestos Abatement Project Management Final Closeout Report for the abatement project at Building No. 146, specifically, an approximate 87-foot section of tunnel at Naval Support Activity (NSA) Crane, Indiana. This project took place on November 18, 19, and 20, 2013 and involved the removal of transite siding and roofing panels.

Cardno ATC was contracted by Lee & Ryan, Inc. to perform the duties of the Private Qualified Person (PQP) ensuring that the contracted asbestos abatement contractor, Professional Thermal Systems, Inc. (PTSI), removed all directed asbestos-containing material according to the designated Naval Facility Engineering Command (NAVFAC) specifications and federal, state, and local regulations in the defined area of Building No. 146 Tunnel. Additionally, Cardno ATC conducted air monitoring to ensure the work practices employed by the contractor did not create a hazard in the areas where work was performed.

We trust this information is responsive to your needs. If you have any questions or concerns regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Emily M. Montgomery, EI

Asbestos Abatement Project Management Final Closeout Report
Building No. 146 Tunnel
300 Highway 361
Crane, Indiana 47522
Cardno ATC Project No. 086.45081.0001

1.0 INTRODUCTION

This report presents a narrative description of the asbestos abatement project monitoring and air sampling performed at Building No. 146 Tunnel at the Naval Support Activity (NSA) Crane, Indiana.

Activities at Building No. 146 involved the removal of transite siding and roofing panels on an approximate 87-foot section of the Tunnel. The results of clearance air monitoring, including the sampling locations, analytical data and chain-of-custodies are attached in **Appendix A**. Daily field notes and other pertinent project information are attached in **Appendix B**.

2.0 AIR SAMPLING METHODS AND EQUIPMENT

PCM Analysis was performed by Cardno ATC representative, Ms. Emily Montgomery, according to the NIOSH 7400 Method. Cardno ATC representatives participate in the NIOSH Proficiency Analytical Testing (PAT) Program and have been deemed proficient. Air sampling, to determine ambient fiber concentrations, was conducted in accordance with AHERA regulations.

Background Testing was conducted to determine ambient airborne fiber counts prior to the beginning of the work and to establish the baseline. Air samples were collected in areas similar to uncontaminated sites of the tunnel.

During abatement air sampling was conducted to determine if airborne levels outside the regulated area exceeded the background or 0.01 fibers per cubic centimeter of air (f/cc), whichever is greater. Air samples were collected within the regulated area in the tunnel near the removal activities, at the waste container and outside of the regulated area at the northwest corner of Building 146, which was downwind from the regulated area. One (1) of each sample was collected for every half work shift as applicable to work being conducted.

Final Air Clearance Testing was conducted to determine if airborne levels inside the regulated area had been reduced to or below 0.01 f/cc as measured by the AHERA PCM protocol. Five (5) PCM samples per regulated area were collected for clearance and a minimum of two (2) field blanks.

All PCM samples were analyzed in accordance with the National Institute for Occupational Safety and Health (NIOSH) 7400 Method for PCM.

PCM samples were collected by drawing air through a 25-mm mixed cellulose ester filter, 0.8-micron pore size, with a long cowl, using a high-flow sampling pump. Each pump was fitted with a critical orifice, which allows a fixed flow rate of air to pass over the face of the filter. The flow rate and the volume of air passed through the filter were determined based on the analytical method to be used and the size of the filter in accordance with AHERA recommendations. Each pump was calibrated before and after the collection of each sample using a rotometer that is calibrated to a primary standard on a yearly basis.

3.0 INTERPRETATION OF ANALYTICAL RESULTS

Analysis of the during-abatement samples by PCM indicated that the results were less than 0.01 f/cc, which is considered to be at acceptable levels.

PCM clearance sampling was utilized for the asbestos abatement. PCM analysis indicated that the results were less than 0.01 f/cc. A level of 0.01 f/cc is also considered to be the "clean air" criteria in the asbestos industry, which is considered an acceptable clearance level for re-occupancy. The abatement at Building No. 146 Tunnel is therefore considered to be complete. The locations and results of the air sample analysis are included in **Appendix A**.

4.0 CONCLUSIONS

Cardno ATC representative, Ms. Emily Montgomery was on-site throughout the project monitoring the performance of the abatement contractor and collecting air samples to document that the abatement methods being used were providing adequate protection for the workers and other building occupants. Removal was performed in accordance with the approved work plan, local, state, and federal regulations.

Based on project oversight, including results of air sampling data collected, it is the professional opinion of Cardno ATC that the asbestos abatement work at Building No. 146 Tunnel of Naval Support Activity (NSA) Crane, Indiana was completed in accordance with the approved work plan, applicable federal, state and local asbestos abatement regulations. The clearance abatement air sample results were found to have a total fiber concentration satisfactory to achieve the acceptable criteria established by Federal EPA standards for re-occupancy following asbestos abatement activities.

Subject: **PQP Written Clearance Letter Report**
Bldg. No. 146
300 Highway 361
Crane, Indiana 47522

Dear Mr. Powell:

Cardno ATC has performed a visual inspection in accordance with ASTM E 1368 ensuring that the asbestos control and work area is free of any accumulations of dirt, dust, or debris. Attached is the Clearance Sampling results conducted after final clean up. The PCM results were <0.01 fibers per cubic centimeter.

Respectfully,

On-Site PQP

Section 10.4

Crane Inspection Process

Before a crane is operated or transported, it must be thoroughly inspected by the operator. The Crane Operator's Daily Checklist lists each area to be inspected.

The operator visually inspects and checks off each item prescribed on the checklist. When the operator observes a deficiency of a load-bearing or load-controlling part of the crane, or a deficiency in a safety device, or an operating condition that would otherwise cause the slightest loss of control or otherwise render the crane unsafe, the operator must secure the crane and notify the his supervisor. The Checklist incorporates items to be checked during the crane pre-start inspection. The Checklist is turned in to the crane crew supervisor at the end of each day or shift for reviewing and signing. Copies are kept by the company, in compliance with regulations pertaining to records retention.

- Examples of the types of information collected for the Daily Checklist include: Crane #
- Location/Assignment
- Date
- Starting and Ending Hour Meter Readings,
- Names of Operator and Signalman

The Checklist inspection includes operating and safety equipment. The items are marked either Satisfactory (S) or Unsatisfactory (U). Some of the items checked include:

- Engine Oil Level
- Fan Belts
- Fuel Oil Levels
- Indicator Gauges and Lights
- Limit Switches
- Wire Rope
- Brakes
- Radiator
- Warning Devices
- Walkways
- Ladders
- Handrails
- Glass, Hooks
- Housekeeping
- Lubrication
- Locks
- Chocks
- Stops
- Controllers
- Motors
- Lights
- Tanks (oil and air)
- Air Compressor
- Batteries
- Tires
- Wheels

CONTRACTOR CRANE OR RIGGING OPERATION CHECKLIST

		YES	NO
1	Is the Certificate of Compliance, P-1, in the operator's cab (or in the contractor's on-site office for rigging operations) with the current operator's name listed?	✓	
2	Is the crane/machine transited to and from the job site correctly? Are the OEM instructions for travel being followed?	✓	
2	Does the operator know the weight of the load to be lifted?	✓	
3	Is the load to be lifted within the crane/machine manufacturer's rated capacity in its present configuration?	✓	
4	Are outriggers or stabilizers required?	✓	
5	If outriggers are required, are outriggers fully extended and down, and the crane load off the wheels?	✓	
6	Is the crane/machine level and on firm ground, if the ground is not firm is the crane/machine blocked?	✓	
7	If blocking is required, is the entire surface of the outrigger pad supported and is the blocking material of sufficient strength to safely support the loaded outrigger pad?	✓	
8	If outriggers are not used, is the crane/machine rated for on-rubber lifts by the manufacturer's load chart? If stabilizers are used and not outriggers and the wheels are not off the ground is this the correct setup in accordance with the OEM?		✓
9	Is the swing radius of the crane counterweight clear of people and obstructions and accessible areas within the swing area barricaded to prevent injury or damage?	✓	
10	Has the hook been centered over the load in such a manner to minimize swing?	✓	
11	Is the load well secured and balanced in the sling or lifting device before it is lifted more than a few inches?	✓	
12	Is the lift and swing path clear of obstructions?	✓	
13	If rotation of the load being lifted is hazardous, is a tag or restraint line being used?	✓	
14	Are personnel prevented from standing or passing under a suspended load?	✓	
15	Is the operator's attention diverted?		✓
16	Are proper signals being used at all times? Is the operator responding properly to the signals? Are radios used for blind lifts?	✓	
17	Is the load lifted a few inches to ensure it is secure and balanced?	✓	
18	Are empty hooks lashed or otherwise secured during travel to prevent swinging?	✓	
19	Does the operator remain at the controls while the load is suspended?	✓	
20	Do the operations ensure that side loading is prohibited?	✓	
21	Are personnel prevented from riding on a load?	✓	
22	Are start and stop motions in a smooth fluid motion (no sudden acceleration or deceleration)?	✓	
23	If operating near electric power lines, are the rules and guidelines understood and adhered to?	✓	
24	Is the lift a critical lift?		✓
25	If so, are all regulations understood and check-off sheets initialed and signed off?	✓	
25.1	Are any overhead power lines in the vicinity?		✓
25.2	If so, are complex lift rules and 1926.550(a)(15) being followed?	✓	
26	If pick and carry operations are allowed and performed, are OEM directions followed (e.g. rotation lock engaged, boom centered over front or rear, etc.)?		NA
26	When the crane/machine is left unattended, is it in a safe condition?	✓	
27	Is rigging gear undamaged and acceptable for the application?	✓	
28	Does rigging gear meet applicable ASME or host country standards (e.g. ASME B30.9 for slings, B30.10 for hooks, B30.26 for hardware such as shackles, safety hoist rings, eyebolts, etc, B30.20 for below the hook lifting devices, etc.)?	✓	
29	Is the rigging gear inspected prior to use?	✓	
30	Is chafing gear used to protect slings (especially synthetic slings) and equipment from damage due to sharp corners and edges?	✓	
31	Is the rigging gear used in accordance with its working load limit? Is the load limit visible?	✓	
32	Are positive latching devices used on crane and rigging hooks, or are the hooks "moused"?	✓

CERTIFICATE OF COMPLIANCE

This certificate shall be signed by an official of the company that provides cranes (or multi-purpose machines, material handling equipment, or construction equipment used to lift loads suspended by rigging gear) or rigging gear for any application under this contract. Post a completed certificate on each crane or alternate machine (or in the contractor's on-site office for rigging operations) brought onto Navy property.

CONTRACTING OFFICER'S POINT OF CONTACT (Government Representative)	PHONE
PRIME CONTRACTOR/PHONE	CONTRACT NUMBER
CRANE OR ALTERNATE MACHINE SUPPLIER/PHONE (if different from prime contractor) 812-254-6202 Graber Crane	CRANE OR ALTERNATE MACHINE NUMBER (i.e., ID number) 227
CRANE OR ALTERNATE MACHINE MANUFACTURER/TYPE/CAPACITY Manitex 30125 30 ton	
CRANE OR ALTERNATE MACHINE OPERATOR'S NAME(S) David Hinkle	

I certify that

1. The above noted crane or alternate machine and all rigging gear conform to applicable OSHA regulations (host country regulations for naval activities in foreign countries) and applicable ASME B30 standards. The following OSHA regulations and ASME standards apply: 29 CFR 1926 & EM 385-1-1
2. The operators noted above have been trained and are qualified for the operation of the above noted crane(s) or alternate machine(s).
3. The operators noted above have been trained not to bypass safety devices during lifting operations.
4. The operators, riggers and company officials are aware of the actions required in the event of an accident as specified in the contract.

Re: U.S. Naval Support Activity Crane Division
Solid Waste Management Unit (SWMU) 16
"Contained-in" Determination for
Contaminated Soil
EPA ID No.: IN5170023498
Martin County

Dear Mr. Brent:

This letter is in response to your November 27, 2013, written request (received via e-mail) for a "contained-in" determination for contaminated soil from the U.S. Naval Support Activity Crane Division Solid Waste Management Unit (SWMU) 16, Crane, Martin County, Indiana.

Pursuant to Indiana's "contained-in" policy, if the applicable default levels are met, the Department may determine on a case-by-case basis that regulation of environmental media (soil or groundwater) as a hazardous waste is not warranted. These exit levels are determined utilizing default values in the Department's RISC Policy. If adequate representative sampling demonstrates contaminant levels are below the applicable default levels, and do not exhibit any hazardous waste characteristics, the department may determine that RCRA hazardous waste is not "contained-in" the media at levels requiring management as hazardous waste.

Your request is for management options available based on meeting applicable industrial default levels. Applicable default levels are specified in the Department's contained-in policy. A copy of the policy and the current RISC industrial default table is enclosed for your reference.

For purposes of this determination, the RCRA "contained-in" policy is applicable only to contaminated soil generated at the aforementioned site. In the 'contained-in' request, it has been determined that the basis for managing the soil as listed waste would be historic releases of F001 listed trichloroethylene degreasing solvent. Through conversations with the contractors requesting the 'contained-in' determination it was disclosed that TCE is still commonly used as a solvent when demilitarizing explosives and as such results in the generation of F002 listed hazardous wastes.

In addition to the trichloroethylene, 1,1,2-trichloroethane, cis-1,2-dichloroethene, trans-1,2-dischloroethene, and vinyl chloride were detected in the soil at levels below the IDEM RISC Soil Direct Contact Closure Levels used as exit criteria in the 'contained-in' determination.

This determination is for a one-time disposal of approximately 2749 cubic yards of TCE contaminated soil.

Additional TCE contaminated soils, centered on sample 16SB200 exceeded the soil direct contact exit criteria. The contaminated soil generated in this area shall be managed and disposed of as hazardous waste.

Based on the information provided by the requestor, compared with the established policy criteria, the following determination applies:

Soil, not including those at or near Sample Location 16SB200, will not be subject to RCRA hazardous waste management standards if the soil is disposed in a permitted municipal waste landfill. Soil must meet the "industrial soil direct" exit criteria for the above referenced contaminants.

Soils generated in the area centered on sample location 16SB200 and extending to the next sample not exceeding the exit criteria are considered to be hazardous waste, are not included in a 'contained-in' determination approval, and shall be subject to 329 IAC 3.1 as applicable.

Media which does not meet applicable default levels or exhibits any characteristic of a hazardous waste must be managed as a hazardous waste under 329 IAC 3.1, as applicable.

If you have any questions, please call John Naddy at 317-233-0404.

Sincerely,

Bruce Kizer, Branch Chief
Compliance and Response Branch
Office of Land Quality

Information Checklist for Contained-In Request

1. Name of responsible party (property owner/operator).

2. Site description (Name, Address, Size of Site, Number of Areas Involved). Please provide any site ID# such as EPA ID#, VRP number, etc.

3. Is the site subject to RCRA corrective action, enforcement orders?

4. Is the site being remediated under state or federal oversight? Identify Agency and Agency contacts.

5. How was the site contaminated? (Spill of hazardous waste, product release, process waste release, other?

6. When was the site contaminated?

7. What EPA waste codes apply and why? Indicate all listed and characteristics codes applicable to the material which contaminated the site.

8. Does the media exhibit any characteristics of hazardous waste, in addition to being contaminated with a listed waste? If it does, the media would be subject to hazardous waste rules regardless of listed waste concentration. Media cannot exit hazardous waste system unless treated to remove the characteristics.

9. Which specific hazardous substances/constituents are present based on analytical results? Be sure to include breakdown products of the listed waste.

10. What is the volume/quantity of media involved? An estimate of the volume/quantity will provide some idea of what size project we are dealing with.

11. Will the media in question be generated one time only, as a batch or in a continuous manner?

12. Is treatment of the media involved or necessary?

13. Analytical results and test methods. Results must be based upon representative sampling.

14. A description of the sampling plan and methods used to assure representative sampling.

15. QA/QC documentaton should be provided. For most industrial default level determinations, we only need a statement that QA/QC procedures were followed and are available if requested. For residential default determinations complete QA/QC documentation must be provided with the request.

16. How will the material be managed at the generation site, intermediate sites, and final destination? What time periods are involved?

17. What is the final destination of the contaminated media and how is it to be managed at the final destination site?

18. How will the company assure contained-in threshold levels are attained for media that will be generated on an ongoing basis?

NONRULE POLICY DOCUMENT

Title: Contained-in Policy Guidance for RCRA
Identification Number: WASTE-0052
Date Originally Effective: October 17, 2002
Dates Revised: None
Other Policies Repealed or Amended: None
Brief Description of Subject Matter: Use of RISC standards to remove contaminated environmental media from regulation as a RCRA hazardous waste or solid waste.
Citations Affected: 40 CFR 268, 329 IAC 10, 329 IAC 3.1

This nonrule policy document is intended solely as guidance and does not have the effect of law or represent formal Indiana Department of Environmental Management (IDEM) decisions or final actions. This nonrule policy document shall be used in conjunction with applicable laws. It does not replace applicable laws, and if it conflicts with these laws, the laws shall control. This nonrule policy document may be put into effect by IDEM thirty days after presentation to the appropriate board and after it is made available for public inspection and comment, pursuant to IC 13-14-1-11.5. If the nonrule policy is presented to more than one board, it will be effective thirty days after presentation to the last. IDEM will submit the policy to the Indiana Register for publication. Revisions to the policy will follow the same procedure of presentation to the board and publication.

Summary

The U.S. EPA "contained-in policy" states that soil and groundwater which does not contain "listed" RCRA hazardous waste, and which is not otherwise hazardous, is not subject to RCRA regulation. A determination as to whether or not "listed" waste is "contained-in" soil or groundwater may be made by authorized states based on whether constituents from listed waste are below health-based levels. It is IDEM's position that contamination levels specified in the *RISC (Risk Integrated System of Closure)* system developed by IDEM represent appropriate health-based levels for determining if soil or groundwater contain "listed" hazardous waste. This NPD is applicable to soil and groundwater which is generated and subsequently managed, and does not replace or alter requirements for closure or clean-ups found in various regulatory authorities. Residential RISC default levels must be used for material that will be managed as non-contaminated (e.g. used as fill, disposed on-site). Industrial default levels may be used for soil which will be managed off-site in a permitted disposal facility (e.g. municipal solid waste) or any unit subject to Clean Water Act regulations. This NPD is not applicable to sediment. This NPD is not applicable to soil or groundwater that will be placed in an ecologically or geologically susceptible area or a wellhead protection area. Consistent with EPA policy, a written

A "contained-in" determination must be obtained from IDEM. Implementation issues and background are discussed below.

Discussion

This guidance is intended to clarify the application of RCRA hazardous waste regulations to environmental media (i.e. soil and groundwater). Environmental media that has become contaminated with "listed" hazardous wastes must be managed as hazardous wastes when generated (e.g. exhumed for discard during remedial activities) because--and only as long as--they contain "listed" waste(s). EPA Regions and authorized states, including Indiana, may apply the contained-in policy to determine site-specific, media-specific and contaminant-specific health-based levels, such that if the concentration of the hazardous constituents in the environmental media fall below the specified health-based levels, the environmental media may be determined to no longer contain hazardous waste. Such a "contained-in determination" may be made by an authorized state before or after treatment of the contaminated environmental media and may include consideration of site-specific exposure pathways (e.g., potential for human exposure, soil permeability, leaching potential to groundwater). It should be noted that any treatment of hazardous waste might require a permit. For further information on this issue, see the IDEM guidance document *Treatment of Hazardous Waste On-site By Generators* at http://www.in.gov/idem/catalog/guidance/la-061-gg.pdf, or contact staff of the RCRA permit or compliance programs at IDEM.

It is IDEM's position that the contaminant levels used in Table A, Default Closure Levels, of the *RISC Technical Resource Guidance Document*, represent an appropriate basis for making risk-based "contained-in determination" for soil and groundwater that will be disposed. Contaminant levels used in Table A were generated using conservative models and default assumptions concerning exposure and site conditions. Because the RISC levels are based only on human health risk, it is not appropriate to use RISC default levels for media that will be placed in ecologically susceptible areas. Karst type geological areas also fall outside RISC default assumptions, as do wellhead protection areas. If applicable, the media must also meet all Land Disposal Restriction (LDR) treatment standards (including treatment of underlying hazardous constituents as defined at 40 CFR §268.2(i) for material that exhibits a characteristic in addition to containing a listed waste). A discussion of management conditions follows.

Conditions

Use of Residential Default Levels

For generated soil and groundwater which would be considered a "listed" waste and are going to be deposited on-site, used as fill, or managed in any way other than off-site disposal at a permitted facility, the Residential levels in Table A must be used. Contaminated soil and groundwater are not subject to RCRA regulatory management requirements if they have been generated with, or treated to, constituent levels:

(1) below chemical of concern (COC) concentration levels in Table A, Residential Levels;
(2) below characteristic levels;
(3) meeting all LDR requirements when applicable; and
(4) will not be managed in an ecologically or geologically susceptible (e.g. wetlands or

(5) karst) area or a wellhead protection area.

Under solid waste rules found at 329 IAC 10, contaminated soil is potentially regulated as a solid waste even if it exits the RCRA hazardous waste regulations. However, using the above criteria for an exit level from hazardous waste regulations, it is also IDEM's position that soil which meets Residential levels in Table A is considered "uncontaminated" the purposes of 329 IAC 10-3-1 (1), which is an exclusion from regulation under the provisions of the solid waste rule.

Use of Commercial/Industrial Default Levels

Depending on how soil is managed, it is also possible to use the Commercial/Industrial default levels in RISC Table A as an "exit" level from RCRA regulation. If soil is disposed at a permitted facility (Subtitle C or D), it is appropriate to use the "Direct" Commercial/Industrial default levels in Table A as the basis for a contained-in determination. Soil no longer contains hazardous waste and is not subject to RCRA regulatory management requirements if it has been disposed of in a RCRA subtitle C or D landfill cell and has been generated with, or treated to, constituent levels:

(1) below chemical of concern (COC) concentration levels in Table A, Commercial/Industrial Levels;
(2) below Characteristic levels; and
(3) meeting LDR requirements if applicable, including alternative standards established for contaminated soils (40 CFR 268.49).

It is also appropriate to use the groundwater Commercial/Industrial default levels in RISC Table A as an "exit" level for groundwater that is managed in any unit subject to Federal Clean Water Act regulations.

Written Determination Approval Required

Due to the complexity of establishing the appropriate exit level from RCRA regulations, and the need to be consistent with EPA policy, any facility that intends to demonstrate that media no longer contains a listed hazardous waste must obtain a written contained-in determination approval from IDEM. Please contact the staff of the Hazardous and Industrial Waste Compliance Program, Office of Land Quality, at 317-308-3133.

Other Options

On a case-by-case basis, facilities may develop site specific risk analyses to establish non-default exit levels.

References

If you need additional information, or have any questions or concerns, please contact the staff of the Hazardous and Industrial Waste Compliance program, Office of Land Quality, at 317-308-3103. The IDEM toll-free telephone number (when calling within Indiana) is 1-800-451-6027. Other references:

Footnotes

Bold text indicates that a change has been made from the previous 2006 Appendix 1 table.

1. Note each column in the closure level tables has a "c" or an "nc" next to the value. This designation indicates whether the numerical value is the result of calculation from a carcinogenic endpoint or a noncarcinogenic endpoint. Knowing the carcinogenic or noncarcinogenic designation is necessary when performing additivity. The user should be aware that there are many parameters used to calculate the closure levels, and a given compound may have closure levels that result from either carcinogenic or noncarcinogenic endpoints. Sometimes the endpoints may be different for different closure types. For instance, a direct soil value may have been generated from a carcinogenic endpoint, but the groundwater value may be from a noncarcinogenic endpoint. Most carcinogens are calculated using endpoints from both carcinogenic and noncarcinogenic toxicity information, and the system used to calculate the default closure level selects the lowest endpoint.
2. Certain chemicals that are considered liquids at soil temperatures have calculated soil saturation levels. The soil saturation level, or "Csat" value, is an indicator of the possibility there is free product present. In cases where the Csat value is lower than any other soil calculated value the Csat value becomes the default closure level. If the user does not think free product exists at the site but has concentrations that exceed Csat, but not other closure levels, then they should contact the IDEM site manager in order to verify there is no free product.
3. Residential soil direct contact values for arsenic and cadmium are based on the algorithms that measure the soil-plant-human uptake and not on the algorithms normally used to measure direct contact to surface soil.

Information Checklist for Contained-In Request

1. Name of responsible party (property owner/operator).

Commander, Naval Support Activity (NSA) Crane – property owner
Commander, Naval Surface Warfare Center (NSWC Crane) – permit owner
Commander, Naval Facilities Engineering Command (NAVFAC) Midwest PWD Crane – project owner.

Project Manager:
Thomas J. Brent
Environmental Restoration/Corrective Action Site PM
Naval Facilities Engineering Command, Midwest, Crane
Code PRC43, Bldg. 3245
300 Highway 361 Crane, IN 47522-5001
Ph: 812.854.6160
Cell: 812.296.6482
Fax: 812.854.4173
Email: thomas.brent@navy.mil

2. Site description (Name, Address, Size of Site, Number of Areas Involved). Please provide any site ID# such as EPA ID#, VRP number, etc.

NSA Crane is located in the southern portion of Indiana, approximately 75 miles southwest of Indianapolis, Indiana and 71 miles northwest of Louisville, Kentucky, immediately east of Crane Village and Burns City. SWMU 16 is approximately 16 acres in size and is located in the north-central portion of NSA Crane. Figure 1-1 shows the general location of NSA Crane. Figure 1-2 shows the layout of SWMU 16.

The EPA ID number is IN5170023498

3. Is the site subject to RCRA corrective action, enforcement orders?

NSA Crane SWMU 16 is subject to RCRA corrective action requirements. It is not subject to any corrective action enforcement orders.

4. Is the site being remediated under state or federal oversight? Identify Agency and Agency contacts.

SWMU 16 is being remediated under US EPA Region 5 oversight. Peter Ramanauskas (312.886.7890) is the EPA contact.

5. How was the site contaminated? (Spill of hazardous waste, product release, process waste release, other?

Two settling tanks located on the eastern and western sides of B146 received discharges from floor drains in B146. The floor drains discharged to the exterior concrete settling tanks through clay (terra cotta) tile pipes. Terra cotta drains are known for leakage potential and may have resulted in the release of contaminants to the subsurface soil. During a remediation effort in 1995, the settling tanks were expected to contain explosive-contaminated sludge. However, it was found that the sumps contained significant quantities of TCE. Subsequent investigations discovered extensive TCE contamination in the soils on the north and west sides of the building. The TCE source was never positively identified.

6. When was the site contaminated?

The release was first observed during 1995. No other information is available regarding historical releases.

7. What EPA waste codes apply and why? Indicate all listed and characteristics codes applicable to the material which contaminated the site.

The most likely EPA listed waste code is F001. This is based on the assumption that the chlorinated solvent release occurred from the solvent degreaser. The only chlorinated solvent that is present in a high enough concentration to potentially fail the toxicity characteristic is trichloroethylene (D940) and only in one sample. Toxicity characteristic testing has not identified any applicable waste codes.

8. Does the media exhibit any characteristics of hazardous waste, in addition to being contaminated with a listed waste? If it does, the media would be subject to hazardous waste rules regardless of listed waste concentration. Media cannot exit hazardous waste system unless treated to remove the characteristics.

The media does not exhibit any other characteristics of hazardous waste.

9. Which specific hazardous substances/constituents are present based on analytical results? Be sure to include breakdown products of the listed waste.

The chlorinated solvent breakdown product,cis-1,2-drichloroethene has been identified in several samples at a maxim concentration of 1.79 mg/kg (16SB2000204). Other breakdown degradation products such as vinyl chloride have not been detected.

10. What is the volume/quantity of media involved? An estimate of the volume/quantity will provide some idea of what size project we are dealing with.

The total volume of soil to be excavated is estimated to 2,749 cubic yards. Approximately 85 cubic yards will be managed as hazardous waste. Figure 2-6 shows the location where excavated wastes will be managed as hazardous.

11. Will the media in question be generated one time only, as a batch or in a continuous manner?

The remedial excavation is a onetime remediation

12. Is treatment of the media involved or necessary?

No treatment of the soils to be excavated is necessary.

13. Analytical results and test methods. Results must be based upon representative sampling.

Table 3-1 contains the analytical data for the chlorinated solvents. Also included are figures 2-2, 2-3, and 2-4 showing the locations of the areas to be excavated and disposed and sample locations. Figure 2-5 is provided to show the depth to bedrock. Figure 2-6 shows the area indicated for disposal as hazardous waste (green polygon). Representative sampling methods were used. All samples were analyzed by standard SW 846 test method in accordance with sampling plans approved by US EPA Region 5.

14. A description of the sampling plan and methods used to assure representative sampling.

The RFI sampling was conducted in accordance with a Quality Assurance Project Plan (QAPP). This QAPP was reviewed and approved by US EPA Region 5 prior to implementation. Subsequent delineation sampling was conducted in accordance with a QAPP developed specifically for delineation sampling. This SAP was also reviewed and approved by EPA Region 5.

15. QA/QC documentaton should be provided. For most industrial default level determinations, we only need a statement that QA/QC procedures were followed and are available if requested. For residential default determinations complete QA/QC documentation must be provided with the request.

An industrial level determination is being requested. The analytical data was validated in accordance with EPA Region 5 requirements. Full data packages were obtained from the laboratory. The data validation letters including supporting QA/QC documentation and analytical laboratory data packages are available in electronic format, if requested.

16. How will the material be managed at the generation site, intermediate sites, and final destination? What time periods are involved?

The soils will be directly loaded into trucks when excavated. Once loaded, each truck will proceed to the NSA Crane weight station for weighing. The truck will then directly travel to the landfill. Once arriving at the landfill the truck will be unloaded. In most cases the trucks are expected to be unloaded on the same day that they are loaded. In some cases the truck will be unloaded the next day. The excavations are expected to be completed within 5 weeks.

17. What is the final destination of the contaminated media and how is it to be managed at the final destination site?

The contaminated media will be transported to the Rumpke Medora landfill. The media will be managed as a solid waste and disposed into the landfill.

18. How will the company assure contained-in threshold levels are attained for media that will be generated on an ongoing basis?

The media will be generated on a one-time basis. Extensive sampling has fully characterized all of the wastes to be shipped for disposal.

John,

I'm sending the Contained-In request to you for SWMU 16 (B146) via AMRDEC. You should receive an email shortly with instructions on how to download. Please let us know if you have any questions or need additional information. I'll be leaving shortly for Thanksgiving and return early Monday morning. Enjoy your Thanksgiving.

Sincerely,
Thomas J. Brent

Mr. Thomas-

When the request is complete, please e-mail it to me for evaluation. If you have any questions, please feel free to contact me.

Thanks.

John Naddy

Cells with yellow highlight denote samples collected under Building 146.
Shaded cells indicate the chemical concentration exceeds the MCS.

J - chemical detected, but the conentration reported is an estimated value
MCS - Media Cleanup Standard
U - concentration not detected at the laboratory detection limit
-- - not analyzed

Re: U.S. Naval Support Activity Crane Division
Solid Waste Management Unit (SWMU) 16
"Contained-in" Determination for
Contaminated Soil
EPA ID No.: IN5170023498
Martin County

Dear Mr. Brent:

This letter is a follow-up to your December 12, 2013 e-mail (attached) requesting concurrence to the disposal of additional overlying soil as a solid waste under the "contained-in" determination issued to your facility and dated December3, 2013.

The December 3, 2013, "contained-in" approved the disposal of approximately 2749 cubic yards of trichloroethylene (TCE) contaminated soil generated at the site with the exception of soil generated in the area centered on sample location 16SB200 and extending to the next sample areas. Sample results had indicated that elevated levels of TCE above the "contained-in" exit criteria were present in the soil near sample location 16SB200 resulting in the determination that the soil generated from that area containing the elevated levels of TCE would be a listed hazardous waste and be subject to regulation under 329 IAC 3.1.

Additional sample data included in your follow-up request indicates that the top two (2) feet of soil located at the 16SB200 sample location does not contain TCE at levels greater than the "contained-in" exit criteria. As such, the request has been put forth to allow for the top eighteen (18) inches of soil to be disposed under the existing "contained-in" determination dated December 3, 2013.

If the additional soil meets the exit criteria under the existing "contained-in" determination and if the addition of this soil does not exceed the 2749 cubic yard amount previously approved, the aforementioned additional soil may be included for disposal in the December 3, 2013 "contained-in" determination approval.

Soils excavated from the area around Sample 16B200 and extending to the next sample containing levels of TCE that do not exceed the "contained-in" exit criteria and are excavated from a depth of eighteen (18) inches below grade to bedrock [approximately forty-eight (48) inches below grade] would be considered to be TCE contaminated hazardous waste and subject to full regulation under 329 IAC 3.1.

If you have any questions, please call John Naddy at 317-233-0404.

Sincerely,

Bruce Kizer, Branch Chief
Compliance and Response Branch
Office of Land Quality

Subject: RE: Contained-In for US Naval Support Activity Crane Division
Attachments: Book3.xlsx; SWMU 16-High Conc TCE Soil Area.pdf

Donna,

We collected a sample from the top 0-2 feet of the high-TCE area using the same QA/QC procedures as the original sample 16SB200. The sample was obtained from as close as practical to the original sample location. Note that roughly the top foot of material is gravel, so this would have been in the 12-24 inch interval. Sample 16SB200 represented the 24-48 inch interval. The results of the recent sample are attached in the spreadsheet (first tab: Results). The results are less than the IDEM RISC industrial direct contact value.

The PDF shows the affected area. The Navy is proposing to remove the top 18 inches for disposal as non-hazardous material. The remaining material [18 inches to bedrock (average approximately 48 inches below ground surface)] would then be disposed as a hazardous waste. Note that we're using 18 inches rather than the full top 2 feet conservatively allowing for unintentional over-excavation as well as bottom surface contamination from contact.

Why are we proposing this approach? Fortuitously, we had built in to the original contract 151 tons for disposal of hazardous waste materials (there were separate excavations that involved metals only that subsequently passed the TCLP). The 2nd tab of the attached spreadsheet (Volume) shows the volumes of the total (0 to 4 feet), top 18 inches, and 18 to 48 inches. If, as the Navy is proposing, the volume from 18 inches to bedrock (approximately 48 inches below ground surface) is disposed as a hazardous waste, then there is sufficient volume in the existing contract to cover the disposal. If IDEM requires the entire volume (0 to 4 feet) to be disposed as hazardous waste, then the existing contract does not have enough volume to cover the disposal.

Please let us know if you concur.

Sincerely,
Tom

Dear Mr. Brent:

Attached is the Contained-In report that Mr. John Naddy for the U.S. Naval Support Activity Crane Division Solid Waste Management Unit (SWMU)16, Crane, Martin County, Indiana. Once you have received this report would you please reply back to me to let me know that you have received the report for our records.

Thank you

INDUSTRIAL WASTE REVIEW SUMMARY

Rumpke Disposal Facility:
Medora Sanitary Landfill
546 County Road 870 West
Medora, IN 47260
Phone: (812) 966-2017

Generator:
NSA Crane

Waste Stream:
Non-hazardous solvent and metals impacted soil and debris

Waste Description:
Unknown processes

Approval Number:
13-1129-369

Re-certification Date:
11/29/14

Technical Supporting Information:
11/8/13 analytical results for TCLP RCRA Metals, TCLP RCRA VOC, TCLP RCRA SVOC

Conditions of Approval:
- Wastes not subject to solidification by Rumpke may not contain any free liquids
- A Rumpke Nonhazardous Industrial Waste manifest or similar manifest with Rumpke approval number should accompany each load of material
- Wastes may not be derived from nor have come in contact with any listed hazardous wastes
- Any changes in the process generating the waste require notification to the Rumpke Industrial Waste Group
- Empty drums (and other containers) should be "RCRA Empty" and open at one end, cut in pieces, and/or crushed

Requirements for Waste in Sealed Drums:
- Each drum should be labeled with a completed Rumpke nonhazardous waste label or other similar label
- The number of drums in the shipment should be identified on the manifest
- Any inapplicable labeling on drums should be removed or obscured
- No bulging drums are acceptable

Disposal Method: ☐ Solidification ☒ Direct Landfill **Waste Code:** 005

Comments: None

Rumpke Decision:	**Approved**

g. Method of Shipment: ☒ Bulk/Loose ☐ Drum ☐ Bagged/Boxed ☐ Other: ____

h. Transportation by: ☐ Rumpke ☒ Other

i. Recommended Special Handling: None

j. Does the waste contain free liquids?	☐ Yes	☒ No
k. Pursuant to 40 CFR 261 and applicable state regulations, is this waste a listed or characteristic hazardous waste?	☐ Yes	☒ No
l. Have Material Safety Data Sheets applicable to the waste been reviewed to determine if the material should be managed as a RCRA, TSCA, and/or othe regulated waste?	☒ Yes	☐ No
m. Does the waste contain regulated asbestos material?	☐ Yes	☒ No
n. Does the waste generate heat, fugitive dust, or exhibit a strong odor? (please specify)	☐ Yes	☒ No
o. Is this waste a listed DOT hazardous material? (please specify)	☐ Yes	☒ No
p. Does the waste contain any radioactive material, including NORM?	☐ Yes	☒ No
q. Does the waste contain any concentrations of PCBs?	☐ Yes	☒ No

RUMPKE

Waste & Recycling Services

WASTE CHARACTERIZATION DATA SHEET

r. Does the waste contain any infectious agents, DEA regulated substances, or FIFRA regulated substances? (please specify)	☐ Yes	☒ No
s. Is this a CERCLA regulated waste?	☐ Yes	☒ No
t. Has the waste been treated? If yes, please describe (attach additional information if necessary):	☐ Yes	☒ No
5. Sampling & Analysis		
a. Has a representative sample (or samples) been analyzed to characterize this waste?	☒ Yes	☐ No

b. Representative Sample Certification:

1. Was the sample obtained in accordance with 40 CFR 261 or equivalent methods? ☒ Yes ☐ No
2. Type of sample(s): ☒ Grab ☐ Composite
3. Applicable sample ID names/numbers: See attached info
4. If multiple samples, briefly describe sampling protocol (attach additional information if necessary): See attached

c. Please attach a copy of the final, signed laboratory report with case narrative and chain of custody. Preliminary reports will not be accepted.

6. Generator Certification

I certify I personally have examined and am familiar with the waste stream identified above and all information is true, accurate, and complete to the best of my knowledge. All analytical results, Material Safety Data Sheets, and other supporting information submitted are truthful and representative of the waste. No waste classified as hazardous waste, regulated PCB waste, infectious waste, or any other waste prohibited from being accepted by the disposal facility will be delivered for disposal. I am aware of the significant penalties for submitting a false certification, including the possibility of fine and imprisonment. I will immediately notify Rumpke of any changes to this waste that may impact its regulatory classification.

☒ I am an employee of the company identified in Section 1 Generator Information.

☐ I am an agent signing on behalf of the company identified in Section 1 Generator Information. Proof of authorization is available upon request.

RE: Project: 13090.02.1100 Pre-Excavation
Pace Project No.: 5088624

Dear Zae Smith:
Enclosed are the analytical results for sample(s) received by the laboratory on October 19, 2013. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kelly M Jones

ANALYTICAL RESULTS

Project: 13090.02.1100 Pre-Excavation
Pace Project No.: 5088624

Sample: HA-4A **Lab ID: 5088624004** Collected: 10/18/13 11:35 Received: 10/19/13 12:20 Matrix: Solid

Results reported on a "dry-weight" basis

Parameters	Results	Units	Report Limit	DF	Prepared	Analyzed	CAS No.	Qual
6010 MET ICP, TCLP	Analytical Method: EPA 6010 Preparation Method: EPA 3010							
	Leachate Method/Date: EPA 1311; 10/22/13 12:00							
Antimony	ND	ug/L	1000	1	10/23/13 13:53	10/24/13 13:30	7440-36-0

QUALIFIERS

Project: 13090.02.1100 Pre-Excavation
Pace Project No.: 5088624

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

Subject: FW: SWMU 16

Brad - Scott is out today, so I'm following up with this correspondence from NAVFAC.

Below you'll see Tom Brent's (NSA Crane Environmental Mgr.) statement about the pest/herb and PCB history at this site.

I need to talk with you this morning about the status of our approval on this project. We have crews scheduled to mobilize on Monday and I need to confirm trucking operations for next week.

Thanks - call me.

Scott,

Pesticides and herbicides would not have been processed at the site. The building and immediate area did not store PCB containing equipment or waste.

Thanks,
Tom

Hello Tom/Tim,

Do you have any knowledge if pesticides or herbicides were processed at or applied to the SWMU 16 site? Was the site ever used to store PCB containing equipment or waste? Landfill is requesting clarification.

Thanks,

R. Scott Powell, P.E.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irritation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irritation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irritation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irritation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irritation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the

Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irritation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irritation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irritation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called sillicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline sillica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline sillica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this [illegible] weights, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called sillicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline sillica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called sillicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline sillica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facillity, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called sillicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline sillica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called sillicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline sillica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facility, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called sillicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline sillica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facillity, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline silica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facillity, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called sillicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline sillica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Dara Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called silicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline sillica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general ventilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

WARNING: Avoid Prolonged Breathing of Dust from Crushed Stone.

Exposure to dust may affect respiratory systems, eyes and/or skin. Crushed stone may contain crystalline silica. Prolonged and repeated breathing of crystalline silica may cause a progressive lung disease called sillicosis. Some researchers have reported that there is evidence that prolonged and repeated breathing of high levels of crystalline sillica dust may cause lung cancer.

Handling: Avoid prolonged inhalation of crushed stone dust. Minimize exposure through wetting or general veutilation. Appropriate protective equipment should be worn when high levels of dust are present.

First Aid: For inhalation, remove to fresh air and seek medical attention if irritation persists. For eye and skin contact, flush eyes with water, wash skin with soap and water and seek medical attention if irratation persists. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Hot Asphalt and its vapors may be harmful to the skin, eyes and lungs.

Handling: Avoid breathing vapors and limit direct skin contact by using appropriate protective equipment.

First Aid: For inhalation, remove to fresh air and seek medical attention. For eye and skin contact, flush with cold water and seek medical attention. For detailed information, see the Material Safety Data Sheet before using or handling this product.

Suggested Delivery Route: RGI has attempted to locate the most efficient route for delivery as an aid to the Hauler. RGI makes no representation regarding the compatibility of the suggested route with and applicable compliance with and applicable state, federal and/or local maximum vehicle weight restrictions. As evidenced by signature, or departure from seller's facilliity, carrier acknowledges that carrier is solely responsible for the accuracy of this vehicle's tare weight, axle weights and gross weight. Carrier shall be responsible for notifying seller when any truck or trailer has been overloaded so as to render it out of compliance with any applicable weight limits. To the maximum extent allowed by law, carrier shall indemnify seller for any loss caused by overloading.

EPA APPROVAL OF SWMU 16 IM REPORT

-----Original Message-----
From: Ramanauskas, Peter [mailto:ramanauskas.peter@epa.gov]
Sent: Monday, August 04, 2014 12:32 PM
To: Brent, Thomas CIV NAVFAC MW, PWD Crane EV
Subject: SWMU 16 IMR

Hi Tom,

Just wanted to let you know that I have no comments on the June 2014 Draft Final Interim Measures Report for SWMU 16.

Curious to know when the indoor air sampling report will be coming in.

Thanks,

Pete
