Re: RESPONSE TO COMMENTS ON DRAFT DELIVERY ORDER COMPLETION REPORT, LANDFILL BOUNDARY DELINEATION, FORESTALL LANDFILL AND DEMOLITION DEBRIS DISPOSAL AREA, NAVAL TRAINING CENTER, GREAT LAKES (Contract No. N68950-96-D-0052, Delivery Order 0092)

1. The Title on the report should include both sites: Forestall Landfill (IR Site 2) and the Demolition Debris Disposal Area (IR Site 13G).

The title has been changed.

2. Explain in the Executive Summary and in the Conclusions that the depth of the waste and the volume of the disposal areas were not calculated since the scope of this project was limited to determining the areal extent of the waste.

The explanation for not calculating the volume or depth of the disposal areas has been added to the Executive Summary and the Conclusions.

3. In section 2.2, provide some additional narrative to IR Site 2 that better explains where the waste was identified related to landmarks like roads and the creek.

Additional narrative has been added as well as a reference to Figure 4.

4. In section 2.3, provide a narrative description of the location of the waste material, relative to landmarks such as the fenceline or existing roads.

Additional narrative has been added as well as a reference to Figure 6.

5. At the bottom of page 3, in the last line "Reports" should be plural.

The correction has been made.

6. Figure 1: Please provide a site location map that shows where the work was conducted under this DO, either adjust what is shown, go to a larger size map, or a different scale.

Figure 1 was provided to illustrate the location of the Great Lakes Naval Training Center. Figure 2 depicts the study sites, which have been color shaded so they are more easily seen.

7. Figure 3: Provide a legend that explains the significance of the circled boring locations.

The circles around the borings in Figure 3 have been removed.
