  - 1.b. **Process Generating Waste** - Describe the process generating the waste in detail. List the specific process/operation or source that generates the waste (e.g., incineration of municipal refuse, asbestos removal, wastewater treatment, building maintenance).  
At a minimum, the Generator should answer the following questions in determining the process generating the waste.
    - What chemicals are stored and/or used at the facility?
    - Is the waste generated from the production/manufacturing of any of the following industries: wood preservation; inorganic pigments; organic pigments; pesticides; explosives; petroleum refining; iron and steel, copper, lead or zinc production?

**GENERATOR INFORMATION**

Section I. Generator Identification:

a. Generator Name: Commander, Navy Region Mid-Atlantic

b. Generator Address: 1510 Gilbert St, Norfolk VA, 23511-2737

-----

c. Generator Phone: Crystal St. Clair-Canali (757)445-6775 /

Tim Reisch (757) 444-6890

Section II. General Waste Profile:

Note: It is the duty of all persons to dispose of their solid waste in a legal manner (Va.Code ' 10.1-1418.1.A). In addition, any person who generates a solid waste shall determine if that waste is a hazardous waste (' 6.1 of the Virginia Hazardous Waste Management Regulations (VR 672-10-1) ("VHWMR")).

a. General description of waste, including its state (e.g., solid liquid, semi-solid, gas):

Solid material that includes Soil and debris (concrete and wood) consistent with construction debris. -----

-----

b. Amount of materials proposed for disposal:

Volume or Weight approximately 6,200 CY

Units cubic yards

The initial full TCLP sampling results, one each, from Grids 1, 2, 3, 7, and 9 determined that these grids would not require in-situ stabilization. Therefore, additional waste characterization (TCLP – Pb only, TPH, and pH) were collected from each grid based on rate of 1 sample per 500 CY. The waste volume estimate for these 5 grids was a total for 7,410 CY. When excavated and staged for disposal, the volume of debris from grid was conservatively estimated, assuming the staged waste was rectangular in shape, to be 8,684 CY, which did not conform to the characterization sampling rate of 1 per 500 CY. VDEQ was made aware of this situation and conservative assumption, and requested additional information. Accurate field measurements of the staged waste were taken to define the volumes for off-site disposal. Based on these accurate volume calculations, 6,160 CY of waste was excavated from these grids, below the original estimate of 7,410 CY.

Grid #	Initial (pre-excavation) Volume Estimated, CY	STOCKPILE / RECTANGLE VOLUME, CY	STOCKPILE / TRAPEZOIDAL VOLUME, CY
1	1482	2949	2182
2	1482	1975	1166
3	1482	0	0
7	1482	2631	2016
9	1482	1129	798
	<b>7410</b>	<b>8684</b>	<b>6162</b>

In consideration of the homogeneous nature of the mixed material and the sampling methodology to ensure the sampling was representative of the waste, the sampling waste characterization data provide herein is deemed adequate to characterize the debris for disposal.

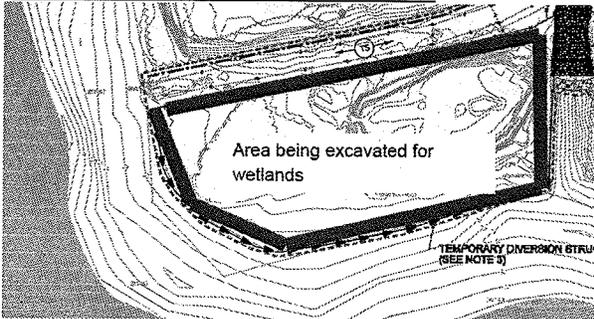

- c. Activities or processes from which the waste was generated, including process flow diagrams specifically addressing the waste stream(s), a description of the source of the waste, and a statement of whether the waste was formerly managed as a hazardous waste.

This waste material is being generated as a result of the excavation for construction of an engineered wetlands. The material was deposited originally as fill material adjacent to the top of a former landfill operated by Norfolk Naval Shipyard (NNSY). On top of the fill a calcium hydroxide berm impoundment was built. That impoundment has been removed. The remaining fill material dimensional lumber, (wood debris) and soil mix needs to be removed to accommodate the construction of an engineered landfill.

NOTE: Attach a flow diagram and indicate any deletions due to proprietary or trade secret information. The Department cannot protect proprietary information or trade secrets.

d. Location of generation:

The removal site is located between Paradise Creek on the southern boundary, and the northern boundary is the NNSY former Eastern Area Landfill and the Western Area Landfill. The area being excavated is on a bend in Paradise Creek : Attached map shows GRIDS 1, 2, 3, 7, and 9 AREAS SPECIFICALLY

e. Method of transportation:

Describe the manner in which the material is being transported for disposal (e.g., bulk containers):

Bulk shipment via Dump Trucks

3. That the materials do not contain 50.0 parts per million or more of polychlorinated biphenyls (PCB's);
4. That the materials do not contain more than 1.0 part per billion of dioxins;

At a minimum, the Generator should answer the following questions in determining the process generating the waste.
  - What chemicals are stored and/or used at the facility?
  - Is the waste generated from the production/manufacturing of any of the following industries: wood preservation; inorganic pigments; organic pigments; pesticides; explosives; petroleum refining; iron and steel, copper, lead or zinc production?

This waste material is being generated as a result of the excavation for construction of an engineered wetlands. The material was deposited originally as fill material adjacent to the toe of a former landfill operated by Norfolk Naval Shipyard (NNSY). On top of the fill a calcium hydroxide berm impoundment was built. That impoundment has been removed. The remaining fill material dimensional lumber, (wood debris) and soil mix needs to be removed to accommodate the construction of an engineered landfill.

**GENERATOR INFORMATION**

Section I. Generator Identification:

a. Generator Name: Commander, Navy Region Mid-Atlantic

b. Generator Address: 1510 Gilbert St, Norfolk VA, 23511-2737

-----

c. Generator Phone: Crystal St. Clair-Canaii (757)445-6775 /

Tim Reisch (757) 444-6890

Section II. General Waste Profile:

Note: It is the duty of all persons to dispose of their solid waste in a legal manner (Va.Code ' 10.1-1418.1.A). In addition, any person who generates a solid waste shall determine if that waste is a hazardous waste (' 6.1 of the Virginia Hazardous Waste Management Regulations (VR 672-10-1) ("VHWMR")).

a. General description of waste, including its state (e.g., solid liquid, semi-solid, gas):

Solid material that includes Soil and debris (concrete and wood) consistent with construction debris mixed with Portland cement.

-----

b. Amount of materials proposed for disposal:

Volume or Weight approximately 3,000

Units cubic yards

The initial full TCLP sampling results from Grid 8 identified this grid for in-situ stabilization. Upon completion of the in-situ stabilization, additional waste characterization samples (TCLP – Pb only, TPH, and pH) were collected from the grid based on rate of 1 sample per 500 CY based on the initial volume estimate of 1, 500 CY for the grid. However, when excavated and staged for disposal, the volume of debris from grid was conservatively estimated, assuming the staged waste was rectangular in shape, to be 3033 CY, which did not conform to the characterization sampling rate of 1 per 500 CY. VDEQ was made aware of this situation and conservative assumption, and requested additional information. Accurate field measurements of the staged waste were taken to define the volumes for off-site disposal. Based on these accurate volume calculations, 2,914 CY of waste was excavated from Grid 8.

In consideration of the homogeneous nature of the mixed material and the sampling methodology to ensure the sampling was representative of the waste, the sampling waste characterization data provide herein is deemed adequate to characterize the debris for disposal.

- c. Activities or processes from which the waste was generated, including process flow diagrams specifically addressing the waste stream(s), a description of the source of the waste, and a statement of whether the waste was formerly managed as a hazardous waste.

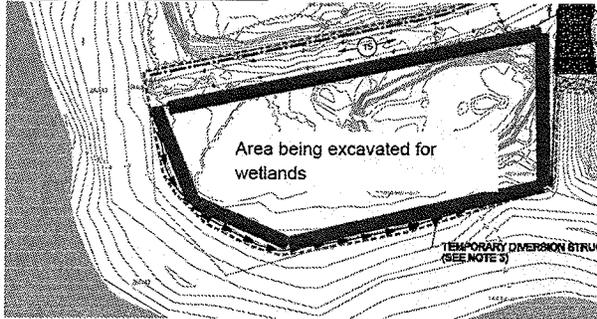

This waste material is being generated as a result of the excavation for construction of an engineered wetlands. The material was deposited originally as fill material adjacent to the toe of a former landfill operated by Norfolk Naval Shipyard (NNSY). On top of the fill a calcium hydroxide berm impoundment was built. That impoundment has been removed. The remaining fill material dimensional lumber, (wood debris) and soil mix needs to be removed to accommodate the construction of an engineered landfill.

NOTE: Attach a flow diagram and indicate any deletions due to proprietary or trade secret information. The Department cannot protect proprietary information or trade secrets.

- d. Location of generation:

The removal site is located between Paradise Creek on the southern boundary, and the northern boundary is the NNSY former Eastern Area Landfill and the Western Area Landfill.

The area being excavated is on a bend in Paradise Creek : Attached map shows GRID 8 AREA SPECIFICALLY

e. Method of transportation:

Describe the manner in which the material is being transported for disposal (e.g., bulk containers):

Bulk shipment via Dump Trucks

3. That the materials do not contain 50.0 parts per million or more of polychlorinated biphenyls (PCB's);
4. That the materials do not contain more than 1.0 part per billion of dioxins;  
*There is no reason to expect presence of dioxins.*
5. That the material is not a radioactive waste or possess the property of radioactivity;

1.

TPH DRO samples are to be taken during removal prior to disposal for meeting disposal facility criteria at the frequency of 1 per 500 cubic yards material.

6. That the materials are not prohibited or restricted from disposal in a Virginia solid waste management facility; and
7. That the analytical results, completed application and attached documentation submitted in support of this special waste disposal request are a representative, true, and accurate description of these materials.

**Section II. General Waste Profile:**

**Note:** It is the duty of all persons to dispose of their solid waste in a legal manner (Va.Code ' 10.1-1418.1.A). In addition, any person who generates a solid waste shall determine if that waste is a hazardous waste (' 6.1 of the Virginia Hazardous Waste Management Regulations (VR 672-10-1) ("VHWMR")).

a. General description of waste, including its state (e.g., solid liquid, semi-solid, gas):

Solid material that includes Soil and debris (concrete and wood) consistent with construction debris mixed with Portland cement.

-----

-----

b. Amount of materials proposed for disposal:

Volume or Weight approximately 1,500

Units cubic yards

- c. Activities or processes from which the waste was generated, including process flow diagrams specifically addressing the waste stream(s), a description of the source of the waste, and a statement of whether the waste was formerly managed as a hazardous waste.

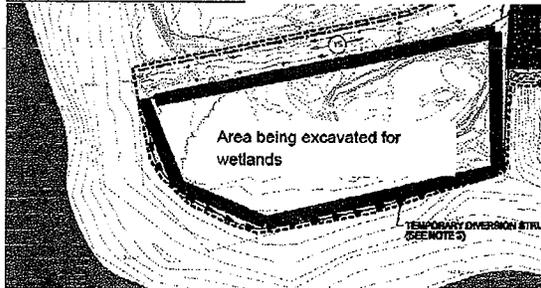

This waste material is being generated as a result of the excavation for construction of an engineered wetlands. The material was deposited originally as fill material adjacent to the toe of a former landfill operated by Norfolk Naval Shipyard (NNSY). On top of the fill a calcium hydroxide berm impoundment was built. That impoundment has been removed. The remaining fill material dimensional lumber, (wood debris) and soil mix needs to be removed to accommodate the construction of an engineered landfill.

NOTE: Attach a flow diagram and indicate any deletions due to proprietary or trade secret information. The Department cannot protect proprietary information or trade secrets.

- d. Location of generation:

The removal site is located between Paradise Creek on the southern boundary, and the northern boundary is the NNSY former Eastern Area Landfill and the Western Area Landfill. The area being excavated is on a bend in Paradise Creek : Attached map shows GRID 6

AREA SPECIFICALLY

- e. Method of transportation:

Describe the manner in which the material is being transported for disposal (e.g., bulk containers):

Bulk shipment via Dump Trucks

c. Generator Phone: (757)445-6703 Tim Reisch (757) 444-6890

**Section II. General Waste Profile:**

Note: It is the duty of all persons to dispose of their solid waste in a legal manner (Va.Code ' 10.1-1418.1.A). In addition, any person who generates a solid waste shall determine if that waste is a hazardous waste (' 6.1 of the Virginia Hazardous Waste Management Regulations (VR 672-10-1) ("VHWMR")).

a. General description of waste, including its state (e.g., solid liquid, semi-solid, gas):

Solid material that includes Soil and debris (concrete and wood) consistent with

construction debris. -----

-----

b. Amount of materials proposed for disposal:

Volume or Weight approximately 1,500

Units cubic yards

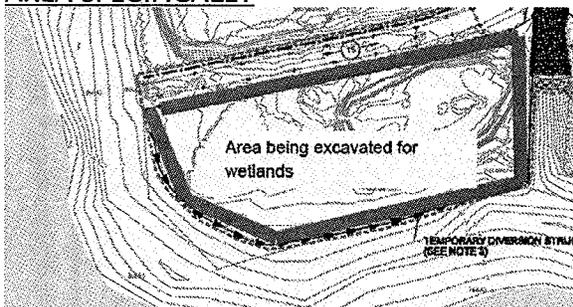

- c. Activities or processes from which the waste was generated, including process flow diagrams specifically addressing the waste stream(s), a description of the source of the waste, and a statement of whether the waste was formerly managed as a hazardous waste.

This waste material is being generated as a result of the excavation for construction of an engineered wetlands. The material was deposited originally as fill material adjacent to the toe of a former landfill operated by Norfolk Naval Shipyard (NNSY). On top of the fill a calcium hydroxide berm impoundment was built. That impoundment has been removed. The remaining fill material dimensional lumber, (wood debris) and soil mix needs to be removed to accommodate the construction of an engineered landfill.

NOTE: Attach a flow diagram and indicate any deletions due to proprietary or trade secret information. The Department cannot protect proprietary information or trade secrets.

- d. Location of generation:

The removal site is located between Paradise Creek on the southern boundary, and the northern boundary is the NNSY former Eastern Area Landfill and the Western Area Landfill. The area being excavated is on a bend in Paradise Creek : Attached map shows GRID 5 AREA SPECIFICALLY

- e. Method of transportation:

Describe the manner in which the material is being transported for disposal (e.g., bulk containers):

Bulk shipment via Dump Trucks

#### B. Waste Stream Information

- 1.a. **Name of Waste** - Enter a name generally descriptive of this waste (e.g., paint sludge, fluorescent bulbs).
- 1.b. **Process Generating Waste** - Describe the process generating the waste in detail. List the specific process/operation or source that generates the waste (e.g., incineration of municipal refuse, asbestos removal, wastewater treatment, building maintenance).

At a minimum, the Generator should answer the following questions in determining the process generating the waste.

  - What chemicals are stored and/or used at the facility?
  - Is the waste generated from the production/manufacturing of any of the following industries: wood preservation; inorganic pigments; organic pigments; pesticides; explosives; petroleum refining; iron and steel, copper, lead or zinc production?
  - Is the waste a result from degreasing, solvent parts cleaning, recovery/reclaiming of solvents (bottoms), wastewater treatment (sludges), or electroplating?
- 1.c. **Color** - Describe the color of the waste (e.g., blue, transparent, varies).
- 1.d. **Strong odor** - **DO NOT SMELL THE WASTE!** If the waste has a known odor, then describe (e.g., acrid, pungent, solvent, sweet).

- c. Activities or processes from which the waste was generated, including process flow diagrams specifically addressing the waste stream(s), a description of the source of the waste, and a statement of whether the waste was formerly managed as a hazardous waste.

This waste material is being generated as a result of the excavation for construction of an engineered wetlands. The material was deposited originally as fill material adjacent to the toe of a former landfill operated by Norfolk Naval Shipyard (NNSY). On top of the fill a calcium hydroxide berm impoundment was built. That impoundment has been removed. The remaining fill material dimensional lumber, (wood debris) and soil mix needs to be removed to accommodate the construction of an engineered landfill.

NOTE: Attach a flow diagram and indicate any deletions due to proprietary or trade secret information. The Department cannot protect proprietary information or trade secrets.

- d. Location of generation:

The removal site is located between Paradise Creek on the southern boundary, and the northern boundary is the NNSY former Eastern Area Landfill and the Western Area Landfill. The area being excavated is on a bend in Paradise Creek : Attached map shows GRID 12, 13, and 14 AREA SPECIFICALLY

- e. Method of transportation:

Describe the manner in which the material is being transported for disposal (e.g., bulk containers):

Bulk shipment via Dump Trucks

Section III. Generator Certification:

I hereby certify, based upon my diligent inquiry into the activities, materials, and processes generating the materials described on this form:

1. That these materials are not classified as listed or characteristic hazardous waste governed by the Commonwealth of Virginia or the state of origin of this waste;
2. That the materials are not regulated medical waste governed by the Virginia Regulated Medical Waste Management Regulations (VR 672-40-01);
3. That the materials do not contain 50.0 parts per million or more of polychlorinated biphenyls (PCB's);
4. That the materials do not contain more than 1.0 part per billion of dioxins;  
*There is no reason to expect presence of dioxins.*
5. That the material is not a radioactive waste or possess the property of radioactivity;
6. That the materials are not prohibited or restricted from disposal in a Virginia solid waste management facility; and
7. That the analytical results, completed application and attached documentation submitted in support of this special waste disposal request are a representative, true, and accurate description of these materials.
