**\*\* High Priority \*\***

Randy:

The importance of this sampling event cannot be overstated. May 1 is not possible. I first need to ascertain if I can obtain EPA in-house review support for this Work Plan. Since St. Js has a high likelihood of making the NPL, I want to make sure that the tox folks in-house at EPA will accept the work the Navy is doing to establish background concentrations. May 30 is most likely the minimum amount of time I need.

t. Juliens Background
