Subject: SJCA Site 5 Stabilization Technical Memorandum
Attachments: ch2mhill logo.bmp

Team,

Attached, please find an electronic submission of the Draft Technical Memorandum summarizing the stabilization approach for the hazardous grids at Site 5. We discussed the approach during the February 2008 partnering meeting, but did not distribute a document because its contents were going to be incorporated into the final work plan and we hadn't yet characterized the whole site. Because of the continued delays on the approval of the ESS, the JV is distributing this tech memo in advance of the work plan to give you a less-rushed opportunity to review the approach. That way, when the revised work plan comes out, the only portion that you will not have reviewed will be the ESS/UXO-related operational approaches.

Please let Tim Wenk and Taylor Sword know if you have any comments or questions on the tech memo. The approach will later be incorporated into the revised work plan.

We will also discuss this during our Site 5 topic Thursday in partnering.

Thanks~
