Re: SITE FOR SPREADING OF NAVY FUEL FARM SOIL PILES,
NAVAL AIR STATION, WILLOW GROVE, PA

Dear Ms. Goldberg:

As you know, the soil piles from the Navy's Fuel Farm were recently sampled and analyzed. The results showed that the chemical concentrations of compounds within the piles fell below PADER interim guidance values. Therefore, it was decided to spread the soils somewhere on site and revegetate.

As requested, I have attached two site maps showing the proposed location for spreading of the soil piles from the Navy's Fuel Farm. As illustrated, there are no streams or other surface bodies of water within 100 feet of the proposed location.

The only information available regarding depth of groundwater in this area comes from a Remedial Investigation (RI) conducted for Site 2, Antenna Field Landfill. The data is contained in our Final RI Report dated February 1993. Based on sampling of the well closest to the proposed siting (ALW-2), depth to groundwater is approximately 13 feet below grade surface (bgs). Also, groundwater flow in this area is directed towards the southwest.

If you required additional information, please give me a call at (610) 595-0567, extension 163. I would like to ask that if this site is satisfactory, that written concurrence be sent back as soon as possible.

Sincerely,

A handwritten signature in cursive script that reads "James L. Colter".

JAMES L. COLTER
Remedial Project Manager
by direction of the Commanding Officer
