RE: Contamination Assessment Report Addendum II/No Further
Action Proposal and Biomonitoring Proposal, JP-5 Spill
Containment Areas, Naval Air Station Cecil Field, Florida.

Dear Mr. Kizer:

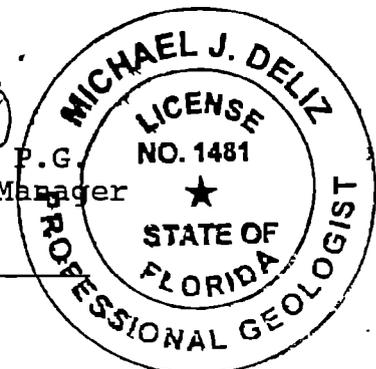

I have reviewed the Preliminary Contamination Assessment Report (CAR) Addendum II/No Further Action Proposal and Biomonitoring Proposal dated July 1997 (received July 28, 1997), submitted for this site. Based upon my review and comments, the enclosed Site Rehabilitation Completion Order was signed by Mr. John M. Ruddell, Director of the Division of Waste Management. The No Further Action Proposal was incorporated by reference in the Site Rehabilitation Completion Order for the Alpha Dam, Avord Dam, Gate 10 Dam, and Gate 14 sites. In addition, biomonitoring at Possum Dam should include toxicity tests using *Hyalella azteca* and *Chironomus tentans*. These tests should be conducted in December 1997 in the approximate location of CEF-POS-SD/TOX 4A. Furthermore, the sediment should also be sampled for TRPH and lead.

If I can be of any further assistance with this matter, please contact me at (904) 921-9991.

Sincerely,

Michael J. Deliz, P.G.

RE: Contamination Assessment Report Addendum II/No Further
Action Proposal and Biomonitoring Proposal, JP-5 Spill
Containment Areas, Naval Air Station Cecil Field
Florida.

Dear Mr. Kizer:

The Bureau of Waste Cleanup has reviewed the Contamination Assessment Report (CAR) Addendum II/No Further Action Proposal (NFAP) and Biomonitoring Proposal, dated July 1997 (received July 28, 1997), submitted for this site. Documentation submitted with the NFAP confirms that criteria set forth in Rule 62-770.600(5), Florida Administrative Code (F.A.C.), have been met. The NFAP is hereby incorporated by reference in this Order. Therefore, you are released from any further obligation to conduct site rehabilitation at the Alpha Dam, Avord Dam, Gate 10 Dam, and Gate 14 sites, except as set forth below. In addition, biomonitoring at Possum Dam should include toxicity tests using *Hyalella azteca* and *Chironomus tentans*. These tests should be conducted in December 1997 in the approximate location of CEF-POS-SD/TOX 4A. Furthermore, the sediment should also be sampled for TRPH and lead.

If a subsequent discharge of petroleum or petroleum product occurs at the site, the Department may require site rehabilitation in order to reduce contaminant concentrations to the levels approved through review of the NFAP or otherwise allowed by Chapter 62-770, F.A.C.
