1.0 INTRODUCTION

This Base Realignment and Closure Program Phase II Sampling and Analysis Outline briefly describes and proposes a plan for assessment of Building 577 at Naval Air Station (NAS) Cecil Field. Building 577 is located approximately 400 feet northeast of the intersection of 6th Street and H Avenue (Figure 1). The facility is referred to as the Golf Course Pavilion in the Environmental Baseline Survey (EBS) Report (ABB Environmental Services, Inc. [ABB-ES], 1994). The building is a small open shelter for a range ball dispensing machine.

2.0 ENVIRONMENTAL BASELINE SURVEY COLOR DESIGNATION

The golf course and associated buildings, including Building 577, were color-coded Gray in the EBS Report because of the routine application of pesticides, herbicides, and fungicides. The applications appear to be consistent with typical golf course maintenance activities. No other concerns specific to Building 577 were identified in the EBS Report. This is consistent with field observations made during a walkover reconnaissance of the site by ABB-ES in January 1996.

3.0 RECOMMENDATIONS

Although several areas of potential environmental concern have been identified at the NAS Cecil Field Golf Course, none of the specific concerns identified are associated with, or likely to impact Building 577. These areas of concern will be evaluated individually.

Residual concentrations of pesticides and herbicides, consistent with typical routine golf course applications, are likely to be present in surface soils surrounding Building 577. However, proper application of pesticides and herbicides does not constitute a release. Therefore, based on the information available, a reclassification of the color code, from Gray to Light Green, is recommended for Building 577 without further evaluation.
