Dear Mike,

This letter has been prepared to provide the professional review certification for the approved no further action confirmatory sampling reports (CSRs) listed below. The CSRs were prepared using sound hydrogeologic principles and judgment. The results and conclusions are based on the geological investigation and the associated information detailed in the text and appended to the report. If conditions are determined to exist that differ from those described, the undersigned geologist should be notified to evaluate the effects of any additional information on the confirmatory sampling described in the reports. The confirmatory sampling reports were developed for the tank sites (listed below) at NAS Cecil Field, Jacksonville, Florida and should not be construed to apply to any other site.

No Further Action CSRs
