June 1999

Revision 0.0

**Sampling and Analysis Outline Addendum
Base Realignment and Closure
Facility 267**

This addendum to the Sampling and Analysis Outline (SAO) for Facility 267 documents the rationale and decision to reclassify the facility from 7/Grey to 1/White. The environmental status of Facility 267 was reviewed during the Base Realignment and Closure (BRAC) Cleanup Team meeting on January 13, 1999.

Facility 267 is identified in the Environmental Baseline Survey (EBS) Report (ABB-ES, 1994) as the Storage Air Operations Department building. Facility 267 was formerly located along the east-west flightline adjacent to Facility 233 (Aircraft Wash Rack). Facility 267 was demolished and disposed of prior to January 1995.

Facility 267 was color-coded Grey in the EBS Report because rust stains on the concrete apron west of the building suggested historical storage of drums. However, during a site walkover in January 1995, no environmental concerns were observed at the former building site. No friable asbestos or lead-based paint was identified during a survey conducted in 1994 by Kemron Environmental Services, Inc. (Kemron, 1995a and 1995b).

The former location of Facility 267 is located within the boundaries of Installation Restoration (IR) Site 36/37. Groundwater at IR Site 36/37 is contaminated, and is being investigated separately.

Facility 267 no longer exists and, therefore, does not represent a hazard to human health or the environment. The NAS Cecil Field BRAC Cleanup Team (BCT) concurred with the recommendation to revise the color code for Facility 267 from Grey to White.
