Subject: Technical Memorandum for No Further Action, Potential Source of  
Contamination 43, Building 617, NAS Cecil Field, Jacksonville, FL

Dear Mr. Davidson:

The U.S. Environmental Protection Agency (EPA) has completed reviewing the subject document. Though the document was generally adequate I would recommend adding a brief discussion on how the vertical depth of the excavation was determined and the rationale for no confirmation sampling. These changes were discussed at the September 2000, BCT meeting. Please revise the draft report accordingly. The final recommendations for no further action is appropriate as is the recommendation for the revised BRAC classification of 4/Dark Green.

EPA's review is based on available information presented by the Navy. If future information is made available which changes this decision, further investigation may be required.

Please contact me at 404/562-8539, if you have any questions.

Sincerely,

A handwritten signature in cursive script, appearing to read "Deborah A. Vaughn-Wright".
