Client Project: 23975

Matrix: WATER

Laboratory Project: 184949

Number Samples: 15

Date Received: 3/23/00

Date Collected: 3/20/00

Sample Receipt Notes: Samples were properly preserved and received on 3/23/00. Analyses were extracted and performed within method required holding times following Test Methods for Evaluating Solid Waste, Physical/Chemical Methods (SW-846). Package was completed as a 'Level IV'.

QC Notes:

Polyaromatic Hydrocarbons (PAH's) SW 8310- BATCH 7429

Fifteen water samples (SAI #'s 00-A38718-32) were extracted and analyzed for PAH's by Method SW846 8310. The extracted method blank was non-detect for target compounds. One surrogate was added during the extraction procedure- p-Terphenyl-d14. All surrogate % recoveries (Form 2A) were acceptable. Reagent water was analyzed as the matrix spike/matrix spike duplicate. All QC results were acceptable Blank and initial/continuing calibration data are available in the raw data section. Raw data is unavailable for the initial PAH curve from 1-25-00 due to inability to 'retrieve from archive; however, a summary form is provided for the initial curve for both the UV and Flourescence channels. All initial and continuing calibration requirements were met. A run log and extraction data are available at the end of the raw data section.

As you review this data package, please call me if you require any additional information at # 1-800-765-0980 (ext. 265).

Thank you.

CASE NARRATIVE for Project Number: 25726
Client Project: NAS Cecil Field 103rd Street GW Sampling / 154282 / CTO - 0029
Task Order Manager: Keith Conn

The following items were noted concerning this project:

1. The following samples were received by Accura Analytical Laboratory on 09/29/00 at 0930:

Client I.D.	Laboratory I.D.
029-SMW01-Q3-00-04	AC00424
029-SMW02-Q3-00-04	AC00425

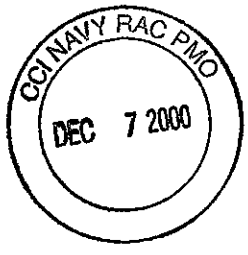
029-SMW11-Q3-00-04	AC00429
029-DUP-Q3-00-04	AC00430
029-EQB-Q3-00-04	AC00431
Trip Blank	AC00432

2. The sample cooler temperature was 2^{0}C.



3. The pH for all VOC samples was noted to be < 2 prior to analysis.

4. The following analysis was performed by a subcontract laboratory:

   PAH by HPLC-SW-846-8310

5. The J values noted for the Metal-Lead, VOC, and FL-PRO analyses indicate estimated values where the compounds are present at concentrations that are less than the quantitation limits, but above the method detection limits.

6. The "B" flags applied to the VOC and FL-PRO results indicate that the analytes were detected in the Method Blank at concentrations above the method detection limit, and the concentrations in the samples were less than ten times the concentration in the Method Blank. These results should be considered estimated due to Method Blank contamination.

7. The following surrogates were outside the method specified limits:

FL-PRO	FL-PRO
ortho-Terphenyl	Nonatriacontane (C39)

Laboratory Control Sample	Method Blank
Laboratory Control Sample Duplicate	Laboratory Control Sample
	Laboratory Control Sample Duplicate

All recoveries were within established in-house limits; therefore the data was accepted.

8. The recoveries for the Laboratory Control Sample and Laboratory Control Sample Duplicate associated with the FL-PRO analysis were outside the client specified limits, but within established in-house limits; therefore the data was accepted.

9. The QC for the following analysis consists of Laboratory Control Sample/Laboratory Control Sample Duplicate due to limited sample volume:

   FL-PRO

   Note that the Laboratory Control Sample/Laboratory Control Sample Duplicate are reported as the Matrix Spike/Matrix Spike Duplicate on the QC table.

Norcross, GA 30071

Client Project: N/A

Matrix: WATER

Laboratory Project: 209998

Number Samples: 8

Date Received: 9/30/00

Date Collected: 9/28/00

Sample Receipt Notes: Samples were properly preserved and received on 9/30/00 (see 'Sample Non-Conformance Form' for additional sample anomalies). One sample was submitted in duplicate. Analyses were extracted and performed within method required holding times following Test Methods for Evaluating Solid Waste, Physical/Chemical Methods (SW-846). Package was completed as a 'Level IV' with 'TETRATEC' electronic deliverables.

QC Notes:

Polyaromatic Hydrocarbons (PAH's)- SW 8310- BATCH 445

Eight water samples (TAI #'s 00-A139645-52) were extracted and analyzed for PAH's by Method SW846 8310. The extracted method blank was non-detect for target compounds No dilutions were required for the samples. One surrogate was added during the extraction procedure: p-Terphenyl-d14. All surrogate % recoveries (Form 2A) were acceptable Reagent water was analyzed as the matrix spike/matrix spike duplicate. All QC results were acceptable. Blank and initial/continuing calibration data are available in the raw data section. All initial and continuing calibration requirements were met An analysis run log and extraction data are available at the end of the raw data section

pH SW 9040- BATCH 6870

Eight water samples (TAI #'s 00-A139645-52) were analyzed for pH by Method SW846 9040. A duplicate was performed on client sample # SMW-01 (TAI # 00-A139645) yielding an acceptable RPD value. The pH meters used were calibrated to acceptable tolerances within method limits.

The following items were noted concerning this project:

1. The following samples were received at Accura Analytical Laboratory on 12/21/00 at 1100.

Client I.D.	Laboratory I.D.
029-SMW01-Q4-00-07	AC05535
029-SMW02-Q4-00-07	AC05536
029-SMW03-Q4-00-07	AC05537

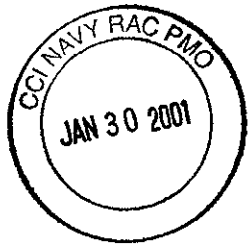
029-EQB-Q4-00-07	AC05542
Trip Blank	AC05543



2. The sample cooler temperature was noted to be 2^0C upon receipt.

3. The pH for the samples for the VOC analysis was noted at <2.0 prior to analysis.

4. The J values noted for the FL-PRO and VOC analyses indicate estimated values where the compounds are present at concentrations that are less than the quantitation limits, but above the method detection limits.

5. The B values noted for the FL-PRO and VOC analyses indicate that the compounds are present in the blank and in the samples, and the results should be considered estimated due to blank contamination.

6. The PAH by HPLC analysis was performed by a subcontract laboratory.

7. TICS were detected for the VOC analysis for sample 029-SW07-Q4-00-07.

8. The following samples required dilution due to high analyte concentration, resulting in elevated detection limits:

VOC – SW-846-8260B	FL-PRO
029-SMW11-Q4-00-07 (1,2,4-Trimethylbenzene)	029-SMW11-Q4-00-07

This report may not be reproduced, except in full, without written approval from Accura Analytical Laboratory, Inc.

9. The detection limits are elevated for the following sample due to limited sample volume:

PAH by HPLC – SW-846-8310

Client Project: #26563
Laboratory Project: 220787
Date Received: 12/21/00

Matrix: Water
Number of samples : 8
Date Collected : 12/20/00

Sample Receipt Notes: Per enclosed Chain of Custody, samples were properly preserved and received in good condition on 12/21/00. There were no anomalies noted in sample log-in. Analyses were extracted and performed within method required holding times following Test Methods for Evaluating Solid Waste, Physical/Chemical Methods (SW-846). Package was completed as a 'Level IV' with 'TETRATEC' electronic deliverables.

QC Notes:

PAH by SW846/8310 – BATCH: 5773
Eight ground water samples (TA #'s 00-A183950-183957) was extracted and analyzed for PAH by Method SW846 8310. All QC calibrations were within method required QC limits. All analyte compounds were calculated using linear regression. The method prep blank had no reported detection for analyte compounds. Surrogate recoveries were within required QC limit of 20-140%, except for 029-SMW7-04-00-07 – 19% was outside the required QC limit biased low. The sample used for MS/MSD was Sample ID: 029-SMW11-04-00-07 of this delivery group. The MS/MSD had fourteen out of the thirty-six spiked compounds outside the required QC limit for this QC batch. The %RPD had four of the spiked compounds outside the required QC limits. The Control spiked compounds were within required historical QC limits. The QC was accepted for this batch.

Note:
The Concentration of the Control is at 2.0ug/L because prep lab inadvertently added 2 mls of the standard when they should have added 1 ml.

PH by SW846/9040/150.1- Batch: 1168
Eight ground water samples (TA #'s 00-A183950-183957) were analyzed for PH by Method SW846 9040 150.1. A duplicate was performed on client sample # 029-SMW11-Q4-00-07 (TA # 00-A183955) yielding an acceptable RPD value. The pH meters used were calibrated to acceptable tolerances within method limits.

029-EQB-Q1-01-10	AC10504
029-TB-Q1-01-10	AC10505

2. The sample cooler temperature was noted to be 2^0C upon receipt.

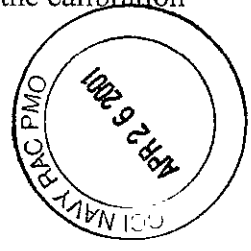
3. The "J" values noted for the VOC and FL-PRO results indicate estimated concentrations that were above the method detection limits, but below the reporting limits.

4. The "B" value noted for the FL-PRO analysis indicates that the compound was detected in the sample and in the Method Blank, and the result should be considered estimated due to Method Blank contamination.

5. The "E" value noted for the VOC analysis indicate that the compound was over the calibration range, and the result for the compound should be considered estimated.

6. The PAH by HPLC analysis was performed by a subcontract laboratory.

7. The pH of the samples was 1.0 for the VOC analysis.



8. The following sample required dilution due to high analyte concentration, resulting in an elevated detection limit:

FL-PRO
029-SMW11-Q1-01-10

This report may not be reproduced, except in full, without written approval from Accura Analytical Laboratory, Inc.

9. The following surrogates were outside the method specified limits:

OTP + C(39) were added to each standard then standard diluted to 1000 ul with $MeCl_2$. For last point the total volume is 1,105 ul leading to a PHS of 7692 not 8500. Also because of volume change the OTP = 45.2 and C(39) = 271.5. These values have been changed in curve.

029-TB-Q2-01-12	AC14042

2. The sample cooler temperature was noted to be 2^0C upon receipt.

3. The "J" values noted for the VOC results indicate estimated concentrations that were above the method detection limits, but below the reporting limits.

4. The pH of the samples was 1.0 for the VOC analysis.

5. The PAH by HPLC analysis was performed by a subcontract laboratory.

This report may not be reproduced, except in full, without written approval from Accura Analytical Laboratory, Inc.

6. The following samples required dilution due to high analyte concentration or matrix interference, resulting in elevated detection limits:

FLA-PRO	VOC – SW-846-8260B	
029-DUP-Q2-01-12	029-SMW11-Q2-01-12	(1,2,4-Trimethylbenzene)

7. The following surrogates were outside the method specified limits as indicated by "Z" qualifier:

FLA-PRO

QC Notes:

PAH by SW846/8310 – BATCH: 3139
Fifteen ground water samples (TA #'s 01-A71048-71062) were extracted and analyzed for PAH by Method SW846 8310. All QC calibrations were within method required QC limits. The method prep blank had no reported detection for analyte compounds. All surrogate recoveries were within required QC limit of 20-140%. The sample used for MS/MSD was Sample ID: 029-DMW13-Q2-01-12 of this sample delivery group. The MS/MSD had five out of the thirty-six spiked compounds outside the required QC limit for this QC batch. The %RPD had five of the spiked compounds outside the required QC limits. The Control was within historical QC limits. The QC was accepted for this batch.

PH by SW846/9040/150.1- Batch: 9619
Ten ground water samples (TA #'s 01-A71048-71057) were analyzed for PH by Method SW846 9040 150.1. A duplicate was performed on client sample # 029-SMW10-Q2-01-12 (TA # 01-A71057) yielding an acceptable RPD value. The pH meters used were calibrated to acceptable tolerances within method limits.

PH by SW846/9040/150.1- Batch: 9620
Five ground water samples (TA #'s 01-A71058-71062) were analyzed for PH by Method SW846 9040 150.1. A duplicate was performed on client sample # 029-EQB-Q2-01-12 (TA # 01-A71062) yielding an acceptable RPD value. The pH meters used were calibrated to acceptable tolerances within method limits.
