1.0 Introduction

CH2M HILL Constructors, Inc. (CCI) has been contracted by the Department of the Navy, Southern Division Naval Facilities Engineering Command (NAVFAC), to provide operation and maintenance (O&M) services at 103rd Street and "A" Avenue Jet Fuel Transfer Pipeline (103rd Street and "A" Avenue), Naval Air Station (NAS) Cecil Field, Jacksonville, Florida, under Response Action Contract No. N62467-98-D-0995, Contract Task Order (CTO) No. 0029. The purpose of this Annual O&M Report is to provide a summary of activities performed at the site during the period of May 23, 2000, to May 31, 2001. The Florida Department of Environmental Protection (FDEP) Annual Status Report Summary form is provided in Appendix A.

1.1 Objective

The objective of the remedial action at the site of 103rd Street and "A" Avenue is to reduce the concentrations of petroleum related contaminants in the groundwater and unsaturated soils to target levels specified by Florida Administrative Code (FAC) 62-777. Air sparging/ soil vapor extraction (SVE) is the technology being utilized to achieve this objective.

1.2 Site History

The 103rd Street and "A" Avenue site is located approximately ¼-mile east of the "A" Avenue gate to NAS Cecil Field. An 8-inch diameter, steel jet fuel transfer pipeline was completed in 1952 to transfer jet fuel from NAS Jacksonville to NAS Cecil Field. A small leak (1/8-inch diameter) was discovered in July 1997 in the pipeline located beneath the eastbound lane of 103rd Street. In July 1997, Bechtel Environmental, Inc. removed approximately 900 cubic yards of petroleum-contaminated soil that had resulted from the leak. The pipeline is currently de-fueled and inactive (Tetra Tech NUS [TtNUS], 1999).

Site assessment activities were performed by TtNUS from 1998 to 1999 to delineate the extent of the light non-aqueous phase liquid (LNAPL), and soil and groundwater contamination at the site and a Remedial Action Plan (RAP) was submitted in August 1999. The RAP specified air sparging and soil vapor extraction as the chosen remedial alternatives to address the soil and groundwater contamination at the site (TtNUS, 1999). The RAP-specified remediation system was constructed by CCI/J.A. Jones during the period of March to May 2000 and start-up was completed on May 23, 2000. The system has been operated and maintained by CCI/J.A. Jones Environmental Services, Inc. (J.A. Jones) since start-up.

1.3 Remediation System/Technology Description

Air sparging is a method of expediting the transfer of saturated zone volatile organic compounds (VOCs) from the groundwater table to the vadose zone, where an SVE system can complete the VOC removal process. Hydrocarbon-free air is injected into air sparge wells, which are screened within the groundwater contaminant plume. As the injected air

passes upward through the VOC laden groundwater and soil, VOCs are partitioned to the passing air and migrate to the vadose zone. The SVE wells, which are located in the vadose zone above the sparge area, apply a vacuum such that the sparge air is captured and removed from the subsurface. The 103rd Street and "A" Avenue air sparge system consists of 20 air sparge wells, labeled as AS-1 through AS-20 that are screened from 22 to 25 feet below land surface (feet bls), a rotary screw-type compressor, a receiver tank, and associated piping and instrumentation. The air sparge system is designed for each air sparge well to operate at an airflow rate of 10 to 12 cubic feet per minute (cfm) at a maximum pressure of 12 pounds per square inch (psi). The locations of the air sparge wells are shown on Figure 1-1.

SVE is performed by applying a negative pressure, or vacuum, to SVE wells placed in the vadose zone. The actual removal is accomplished by lowering the relative pressure in the soil mass below the equilibrium pressure of the contaminant using a vacuum blower. The contaminant in the soil will volatilize and then be removed via the SVE wells. The SVE system at the 103rd Street and "A" Avenue site consists of 21 vertical vapor extraction wells, VE-1 through VE-21; a positive displacement type vacuum blower; a moisture separator equipped with a transfer pump and storage tank; and associated piping and instrumentation. The extracted vapors are treated by two 1,000-pound granular activated carbon (GAC) units placed in series prior to being discharged to the atmosphere. The SVE system is designed for each vapor extraction well to operate at an airflow rate of 16 to 17 cfm and at a vacuum pressure of 4 inches of mercury (Hg) at the wellhead. The locations of the SVE wells are shown on Figure 1-1.

NOTES

1.) THE SPECIFIC PURPOSE OF THIS SURVEY IS TO GRAPHICALLY ILLUSTRATE THE LOCATION OF EXISTING WELLS AND IMPROVEMENTS ON SUBJECT SITE.

2.) THIS SURVEY IS NOT VALID WITHOUT THE SIGNATURE AND THE ORIGINAL RAISED SEAL OF A FLORIDA LICENSED SURVEYOR AND MAPPER.

3.) NORTH ARROW SHOWN HEREON IS BASED ON COORDINATES FURNISHED BY THE CLIENT.

4.) UNDERGROUND LINES SHOWN HEREON ARE AS PER CONTRACTOR AND WERE NOT VERIFIED BY THIS FIRM.

5.) REMEDIATION STRUCTURES NOTED AS FIELD MARKED BY OTHERS.

6.) THIS MAP IS NOT TO BE CONSTRUED AS A BOUNDARY SURVEY.

7.) THIS MAP DOES NOT DETERMINE OR REFLECT OWNERSHIP OF LOCATIONS.

2.0 System Performance Monitoring

O&M checks of the system were performed daily for the first week of operation and weekly thereafter. System checks were performed daily during the first week of operation and monthly thereafter.

During an O&M check, a preventative maintenance checklist (based upon manufacturer's recommendations) is completed, and any required maintenance activity is performed. A system check consists of an O&M check and system performance monitoring, including reading of all meters and gauges and sample collection.

2.1 Operational Efficiencies

Air Sparging System		
	Period	**To Date**
Hours of Possible Operation	8952	8952
Hours of Actual Operation	5722	5722
Percent hours of Operation	63.9	63.9
Soil Vapor Extraction System		
Hours of Possible Operation	8952	8952
Hours of Actual Operation	7455	7455
Percent hours of Operation	83.3	83.3

2.2 Summary of Maintenance and System Downtime

2.2.1 Air Sparging System

During the period of May 23, 2000, to May 31, 2001, the air sparing system ran a total of 238.4 days out of a possible 373 days, resulting in 3,230 hours of down time. The air sparging system down time is detailed as follows:

- Down for total of 1129 hours due to high level in the SVE moisture separator holding tank. The air sparge compressor is electronically interlocked to shut down when the SVE system shuts down.
- Down for a total of 975 hours due to electrical problem in the air compressor control circuitry. The problem was corrected by replacing the defective motor starter for the air compressor motor and adjusting the compressor controls to cycle properly.
- Down for total of 724 hours due to electrical problem in air compressor cooling fan circuitry. The problem was corrected by replacing the defective motor starter for the cooling fan motor.
- Manually shut down for total of 161 hours for quarterly and annual groundwater sampling events.

- Down for 108 hours for air compressor high temperature alarm. Reset alarm and restart system.
- Manually shut down for total of 104 hours for monthly water level measurements.
- Manually shut down for total of 29 hours for routine maintenance.

2.2.2 SVE System

During the period of May 22, 2000, to May 31, 2001, the SVE system ran a total of 310.6 days out of a possible 373 days, resulting in 1,497 hours of down time. The SVE system down time is detailed as follows:

- Down for total of 1129 hours for high level in the moisture separator water storage tank. which resulted from water being drawn into the SVE wells during rain events. The water in the storage tank was removed for proper disposal and the system was restarted.
- Manually shut down for total of 161 hours for quarterly and annual groundwater sampling events.
- Manually shut down for total of 104 hours for water level measurements.
- Down for 91 hours to replace the silencer on the blower. The system was restarted.
- Manually shut down for total of 12 hour for routine maintenance.

2.3 Pressure/Flow Rate Monitoring

2.3.1 Air Sparge System

During the monitoring period, pressure was measured at each sparge wellhead on a monthly basis for the period of May 23, 2000, to May 31, 2001. The data are provided in Table 2-1.

During normal operation, the wellhead pressures for the shallow sparge wells averaged 9.4 psi, compared to the design pressure of 9 psi.

2.3.2 Vapor Extraction System

During the monitoring period, vacuum pressure and flow rate were measured at each vapor extraction wellhead on a monthly basis for the period of May 23, 2000 to May 31, 2001. The data from the flow and vacuum pressure measurement events are provided on Table 2-2.

During normal operation, the wellhead vacuum pressures for the vapor extraction wells averaged 14 inches of water column, compared to the design vacuum pressure of 54 inches of water column. The actual wellhead vacuum is maintained at a level that is less than the design wellhead vacuum in order to minimize the groundwater/rainwater drawn into the SVE wells due to the shallow water table and low lying topography. The average total flow rate for the SVE system was 544.6 standard cubic feet per minute (scfm) during the monitoring period, compared to the design flow rate of 350 scfm. The airflow rates averaged 25.9 scfm for each extraction well compared to the design extraction flow rate of 16 to 17 scfm per well.

2.4 Water Level Measurements

Depth to water measurements were recorded at selected monitoring wells on a monthly basis during the monitoring period. The results from the water level measurements are provided in Table 2-3.

Light non-aqueous phase liquid (LNAPL) was not noted in any monitoring well during the monitoring period.

3.0 Summary of Sampling and Laboratory Analytical Results

3.1 Vapor Monitoring

GAC units were used to treat the SVE effluent air before discharge to the atmosphere. The GACs were removed on February 8, 2001 because the effluent VOC concentration was less than the FDEP treatment requirement of 13.7 pounds per day. Prior to GAC removal, the GAC influent, mid-fluent and effluent were sampled monthly for analyses by U.S. Environmental Protection Agency (EPA) Method 18, TO-14. After GAC removal, the SVE effluent was sampled monthly for analysis by EPA Method 18, TO-14. Copies of the analytical laboratory reports from the air sampling events are provided in Appendix B, and analytical results are summarized in Tables 3-1, 3-2, and 3-3. The pounds per day loading (air emission) rate summary is provided in Table 3-4.

Based upon an average pounds per day VOC removal rate and an on-stream time of 310.6 days, a total of 6.1 pounds of VOCs were removed from the subsurface during the monitoring period via volatilization. It should be noted that this calculation does not take into account the reductions that were a result of biodegradation of the contaminants in the groundwater.

3.2 Groundwater Monitoring

Monitoring wells CEF-103-SMW-01, CEF-103-SMW-02, CEF-103-SMW-03, CEF-103-SMW-07, CEF-103-SMW-10, and CEF-103-SMW-11 were sampled for VOCs, semivolatile organic compounds (SVOCs), lead, and total recoverable petroleum hydrocarbon (TRPH) on a quarterly basis during the monitoring period. Monitoring wells CEF-103-SMW-04, CEF-103-SMW-05, CEF-103-SMW-06, CEF-103-SMW-08, CEF-103-SMW-09, CEF-103-SMW-12, and CEF-103-DMW-01 were only sampled during the annual sampling event performed on May 20, 2001. The annual sampling event includes 12 shallow monitoring wells (11 to 18 feet below ground surface) and 1 deep monitoring well (38.75 feet bls). The deep well and 11 of the 12 shallow monitoring wells exhibited significant decreases in contaminant concentrations from the baseline groundwater sampling event that was performed on March 20 2000, prior to system start up. The deep monitoring well and 11 shallow monitoring wells exhibited concentrations below groundwater cleanup target levels (GCTLs) for all constituents. The twelfth monitoring well, CEF-103-SMW-11, is the eastern most monitoring well; it is located outside the treatment zone of the air sparge system. This well has exhibited decreases in contaminant concentrations but the levels are still above the GCTLs for trimethylbenzenes, isopropylbenzene, naphthalene, and total xylenes. A site map showing the locations of the monitoring wells are shown on Figure 1-1. Copies of the analytical laboratory reports from the groundwater sampling events are provided in Appendix C, and analytical results are summarized in Table 3-5.

Dissolved oxygen (DO) measurements were recorded during sampling of the monitoring wells. The results indicate that the DO concentrations in the monitoring wells located within the treatment zone were elevated as a result of remediation system operation. It should be noted that the DO concentration in monitor well CEF-103-SMW-11 is not elevated indicating that it is not affected by the remediation system. The results from the DO measurement events are summarized in Table 3-6.

4.0 Conclusions and Recommendations

Out of the 12 shallow monitoring wells and 1 deep monitoring well, only one well, CEF-103-SMW11 was found to have contaminant concentrations greater than the GCTL during the annual groundwater sampling event. The concentrations in CEF-103-SMW11 were decreased from the baseline sampling event and were below the Natural Attenuation Default Source Concentrations specified by FAC 62-777 except for isopropylbenzene.

LNAPL was not noted in any monitoring well during the monitoring period.

It is recommended that the remediation system continue to operate. If contaminant concentrations in monitoring well CEF-103-SMW-11 do not continue to decrease below the GCTLs, then extending the air sparge treatment zone to include the CEF-103-SMW-11 area will be evaluated.

FDEP Annual Status Report Form

Active Remediation
Annual Status Report Summary

DEP Form # 62-770.900(5)
Form Title: Active Remediation Annual Status Report Summary
Effective Date: September 23, 1997

Site Name 103rd St & "A" Ave Jet Fuel Transfer Pipelin
Location NAS Cecil field, Jacksonville, Florida
RAP Approval Date / /
Media Contaminated: ☑ Groundwater ☑ Soil

FDEP Facility ID No. _____
Applicable Dates 5 /23/0 to 5 /31/1
System Startup Date 5 /23/0

Method of Groundwater Remediation:

☐ Pump-and-Treat
- Design Flow Rate _____ (gpm)
- Actual Flow Rate _____ (gpm)
- Total Vol. Recovered to Date _____ (1000 gal)

☑ In Situ Air Sparging
- Design Air Flow Rate 220 scfm (cfm)
- Actual Air Flow Rate N/A (cfm)
- Estimated Radius of Influence 30 (ft)

☐ Biosparging
- Design Flow Rate _____ (gpm)
- Actual Flow Rate _____ (gpm)

☐ Bioremediation

☐ Other _____

Estimated Total Mass Recovered or Remediated This Period: 6.1 (lbs)
- Mass Removed by Pump-and-Treat _____ (lbs)
- Mass Removed by VES and/or AS 6.1 (lbs)
- Mass Removed by FP Recovery _____ (lbs)
- Other Estimated Mass Removed _____ (lbs)
  (specify method: _____)

Concentration of Total VOAs in Designated Wells at End of:

	This Period	Previous Period
• MW-4	2.5 ppb	1136 ppb
• MW-5	1.1 ppb	138 ppb
• MW-6	1.5 ppb	137 ppb
• MW-11	160 ppb	674 ppb

Method of Soil Remediation:

☑ Vapor Extraction System (VES)
- Design Air Flow Rate 350 SCFM (cfm)
- Actual Air Flow Rate 544.6 SCFM (cfm)
- Estimated Radius of Influence 15 (ft)
- Air Emissions Treatment
  ☑ Discontinued / date 2 /8 /1 ☐ Ongoing

☐ Soil Bioventing
- Design Air Flow Rate _____ (cfm)
- Actual Air Flow Rate _____ (cfm)

☐ In Situ Bioremediation

☐ Other _____

Free Product Present: ☐ Yes ☑ No
- Volume Recovered to Date _____ (gal)

Estimated Time of Cleanup for Active Remediation: 1477 (days)
- Estimated time of cleanup based on target level concentration C and on the exponential decay equation, $C_1 = C_0 e^{xt_1}$, where C_1 = present concentration at the most contaminated source well (ppb); C_0 = highest initial concentration of applicable chemical of concern at system startup (ppb); x = decay coefficient; and t_1 = length of time between initial and present concentration (days). A semi-log plot for cleanup times should be provided.

Cleanup Time Predicted in RAP: 730 (days) [explain below, difference between RAP and calculated]

O & M Problems: ☑ Yes ☐ No (if yes, provide explanation below)
- No. of scheduled O & M visits weekly
- Down-time AS: 135, SVE: 63 (days)
- No. of unscheduled O & M visits _____

Description of O & M Problems: Water drawn into SVE wells due to high water table and low topography, electrical problems with air sparge equipment that have now been solved.

Short Description of Effectiveness of Cleanup: COC concentrations have decreased below GCTLs in all wells except MW-11. MW-11 is outside of the influence of the treatment system. MW-11 clean-up is due to source removal & reduction from from treatment system. The calculated clean-up time is based upon MW-11.

Recommendations and Proposed Modifications: _____

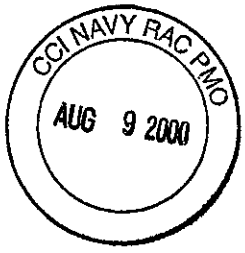
Laboratory Analytical Reports for Air Samples

ACCURA ANALYTICAL LABORATORY, INC.
6017 Financial Drive, Norcross, Georgia, 30071, Phone (770) 449-8800



CASE NARRATIVE for Project Number: 25115
Client Project: N.A.S. Cecil Field 103RD Street / 154282 CTO-0029

The following items were noted concerning this project:

1. The following analysis was performed by a subcontract laboratory:
   VOC's TO-14A

2. The following sample required dilution due to high analyte concentration, resulting in elevated detection limits:
   VOC's TO-14A
   029-ACA-I-A-0724-00-02 Xylenes (m,p)

Quality Assurance

This report may not be reproduced, except in full, without written approval from Accura Analytical Laboratory, Inc.

Norcross, GA 30071

Re: Laboratory Project No. 20031
Case: 20031; SDG:79113

Dear Mr. Wilmoth:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on July 27, 2000. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 7/27/00 ETR No: 79113		
425405	029ACAIA07240002	07/24/00	Air
425406	029ACA2IA07240002	07/24/00	Air
425407	029ACAEA07240002	07/24/00	Air

Method TO-14A Modified-Volatile Organics;
Please note due to a limitation of characters inherent in the reporting software, the first six characters of the client identification above were truncated.

Please note that the original volatile organic analysis of sample I072400002 was accomplished at a dilution based upon initial screen data that indicated target compound Xylene (m,p) was present at concentrations that would have been above the calibration in a full strength acquisition. This sample was subsequently reanalyzed at an appropriate dilution yielding acceptable results. Both sets of results have been presented in this submittal.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

Sincerely,

Christopher A. Ouellette
Laboratory Director

Re: Laboratory Project No. 20020
Project Name: NAS Jacksonville, FL
Case: 20020; SDG: 79066

Dear Mr. Wilmoth:

Enclosed are the results of analyses performed on samples received at Severn Trent Laboratories on July 25, and 28, 2000. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 7/25/00 ETR No: 79006		
424985	028SVE106EA07200028	07/20/00	Air

Method TO-14A Modified-Volatile Organics;
Please note due to a limitation of characters inherent in the reporting software, the first six characters of the client identification above were truncated.

The laboratory noted no exceptions to method quality control requirements for this analytical work.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

Sincerely,

Christopher A. Ouellette
Laboratory Director

Re: Laboratory Project No. 20031
Case: 20031; SDG:79113

Dear Mr. Wilmoth:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on July 27, 2000. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 7/27/00 ETR No: 79113		
425405	029ACAIA07240002	07/24/00	Air
425406	029ACA2IA07240002	07/24/00	Air
425407	029ACAEA07240002	07/24/00	Air

Method TO-14 Modified-Volatile Organics;
Please note due to a limitation of characters inherent in the reporting software, the first six characters of the client identification above were truncated.

Please note that the original volatile organic analysis of sample I072400002 was accomplished at a dilution based upon initial screen data that indicated target compound Xylene (m,p) was present at concentrations that would have been above the calibration in a full strength acquisition. This sample was subsequently reanalyzed at an appropriate dilution yielding acceptable results. Both sets of results have been presented in this submittal

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

Sincerely,

Christopher A. Ouellette
Laboratory Director

Re: Laboratory Project No. 20020
Project Name: NAS Jacksonville, FL
Case: 20020; SDG: 79066

Dear Mr. Wilmoth:

Enclosed are the results of analyses performed on samples received at Severn Trent Laboratories on July 25, and 28, 2000. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 7/25/00 ETR No: 79006		
424985	028SVE106EA07200028	07/20/00	Air

Method TO-14A Modified-Volatile Organics;
Please note due to a limitation of characters inherent in the reporting software, the first six characters of the client identification above were truncated.

The laboratory noted no exceptions to method quality control requirements for this analytical work.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

Sincerely,

Christopher A. Ouellette
Laboratory Director

The following Qualifiers may be used when reporting any Organic parameters analyzed by Gas Chromatography/mass Spectometry (GCMS). Any additional qualifiers used in the reports will be described in the case narrative. These flags are based on the EPA Contract Laboratory Program statement of work.

GC/MS Qualifiers

A- The reported Tentatively Identified Compound (TIC) is a suspected Aldol-condensation product.

B- The reported analyte was detected in the associated method blank as well as the sample.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. This flag alerts data users that any discrepancies between the concentrations reported for the dilutions may be due to dilution of the sample or extract. It additionally indicates that spike recoveries may have been diluted below quantifiable levels.

E- Compound quantitation is above the instrument's calibration range for this analysis.

J - Indicates an estimated value.

U- Indicates compound was analyzed for but not detected above the reporting limit.

X,Y,Z - Laboratory defined flags. These flags must be fully described, and such description attached to the Sample Data Summary Package and the case Narrative. Begin by using "X" and go on to "Y" as necessary. These flags may also be used to combine several flags, as needed.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
H - Operator selected an alternate compound hit.

CASE NARRATIVE for Project Number: 25374
Client Project: N.A.S. Cecil Field 103 Rd. St. Monthly Air / 154282 CTO-0029
Task Order Manager: Keith Conn

The following items were noted concerning this project:

1. The following analysis was performed by a subcontract laboratory:
   T0-14A

2. The following sample required dilution due to high analyte concentration, resulting in elevated detection limits:
   T0-14A
   029-ACA-I-A-0815-00-03

Quality Assurance

Mr. Jeff Wilmoth
Accura Analytical Laboratories
6017 Financial Drive
Norcross, GA 30071

Re: Laboratory Project No. 20031
Case: 20031; SDG:79442

Dear Mr. Wilmoth:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on August 18, 2000. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 8/18/00	ETR No: 79442	
427756	029ACAIA08150003	08/15/00	Air
427757	029ACA2IA08150003	08/15/00	Air
427758	029ACAEA08150003	08/15/00	Air

Method TO-14A Modified-Volatile Organics;
Please note due to a limitation of characters inherent in the reporting software, the first four characters of the client identification above were truncated.

Please note that the volatile organic analysis of sample CAIA08150003 was accomplished at a dilution based upon initial screen data that indicated target compound Toluene was present at concentrations that would have been above the calibration in a full strength acquisition.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

Sincerely,

Christopher A. Ouellette
Laboratory Director

Mr. Jeff Wilmoth
Accura Analytical Laboratories
6017 Financial Drive
Norcross, GA 30071

Re: Laboratory Project No. 20031
Case: 20031; SDG:79442

Dear Mr. Wilmoth:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on August 18, 2000. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 8/18/00 ETR No: 79442		
427756	029ACAIA08150003	08/15/00	Air
427757	029ACA2IA08150003	08/15/00	Air
427758	029ACAEA08150003	08/15/00	Air

Method TO-14A Modified-Volatile Organics;
Please note due to a limitation of characters inherent in the reporting software, the first four characters of the client identification above were truncated.

Please note that the volatile organic analysis of sample CAIA08150003 was accomplished at a dilution based upon initial screen data that indicated target compound Toluene was present at concentrations that would have been above the calibration in a full strength acquisition.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

Sincerely,

Christopher A. Ouellette
Laboratory Director

CAO/bas
Enclosure

00072A

The following Qualifiers may be used when reporting any Organic parameters analyzed by Gas Chromatography/mass Spectometry (GCMS). Any additional qualifiers used in the reports will be described in the case narrative. These flags are based on the EPA Contract Laboratory Program statement of work.

GC/MS Qualifiers

A- The reported Tentatively Identified Compound (TIC) is a suspected Aldol-condensation product.

B- The reported analyte was detected in the associated method blank as well as the sample.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. This flag alerts data users that any discrepancies between the concentrations reported for the dilutions may be due to dilution of the sample or extract. It additionally indicates that spike recoveries may have been diluted below quantifiable levels.

E- Compound quantitation is above the instrument's calibration range for this analysis.

J - Indicates an estimated value. This flag is used when the result is less than the reporting limit, but > ½ reporting limit.

U- Indicates compound was analyzed for but not detected above the reporting limit.

X,Y,Z - Laboratory defined flags. These flags must be fully described, and such description attached to the Sample Data Summary Package and the case Narrative. Begin by using "X" and go on to "Y" as necessary. These flags may also be used to combine several flags, as needed.

September 29, 2000

Mr. Jeff Wilmoth
Accura Analytical Laboratories
6017 Financial Drive
Norcross, GA 30071

Re: Laboratory Project No. 20031
Case: 20031; SDG:79819

Dear Mr. Wilmoth:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on September 20, 2000. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 9/20/00 ETR No: 79819		
430662	029ACAIA09180004	09/18/00	Air
430663	029ACA2IA09180004	09/18/00	Air
430664	029ACAEA09180004	09/18/00	Air

Method TO-14A Modified-Volatile Organics;
Please note that due to a limitation of characters inherent in the reporting software, some characters of the client identification above were truncated.

Please note that in the analyses of samples in this delivery group, one additional qualifier was utilized. It is defined as follows:

Z = Quantitation of the Tentatively Identified Compound is based on the integration of chromatographic peak which represents more than a single component co-eluting at the same retention time.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 0001 and ending with page 0130.

Mr. Jeff Wilmoth
Accura Analytical Laboratories
6017 Financial Drive
Norcross, GA 30071

Re: Laboratory Project No. 20031
Case: 20031; SDG:79819

Dear Mr. Wilmoth:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on September 20, 2000. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 9/20/00 ETR No: 79819		
430662	029ACAIA09180004	09/18/00	Air
430663	029ACA2IA09180004	09/18/00	Air
430664	029ACAEA09180004	09/18/00	Air

Method TO-14A Modified-Volatile Organics;
Please note that due to a limitation of characters inherent in the reporting software, some characters of the client identification above were truncated.

Please note that in the analyses of samples in this delivery group, one additional qualifier was utilized. It is defined as follows:

Z = Quantitation of the Tentatively Identified Compound is based on the integration of chromatographic peak which represents more than a single component co-eluting at the same retention time.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 0001 and ending with page 0130.

The following Qualifiers may be used when reporting any Organic parameters analyzed by Gas Chromatography/mass Spectometry (GCMS). Any additional qualifiers used in the reports will be described in the case narrative. These flags are based on the EPA Contract Laboratory Program statement of work.

GC/MS Qualifiers

A- The reported Tentatively Identified Compound (TIC) is a suspected Aldol-condensation product.

B- The reported analyte was detected in the associated method blank as well as the sample.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. This flag alerts data users that any discrepancies between the concentrations reported for the dilutions may be due to dilution of the sample or extract. It additionally indicates that spike recoveries may have been diluted below quantifiable levels.

E- Compound quantitation is above the instrument's calibration range for this analysis.

J - Indicates an estimated value. This flag is used when the result is less than the reporting limit, but > ½ reporting limit.

U- Indicates compound was analyzed for but not detected above the reporting limit.

X,Y,Z - Laboratory defined flags. These flags must be fully described, and such description attached to the Sample Data Summary Package and the case Narrative. Begin by using "X" and go on to "Y" as necessary. These flags may also be used to combine several flags, as needed.

STL Burlington is a part of Severn Trent Laboratories, Inc.

Norcross, GA 30071

Re: Laboratory Project No. 20031
Case: 20031; SDG: 80293

Dear Mr. Fuller:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on October 23, 2000. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 10/23/00 ETR No: 80293		
434688	029ACAIA10180005	10/18/00	Air
434689	029ACA2IA10180005	10/18/00	Air
434690	029ACAEA10180005	10/18/00	Air

Method TO-14A Modified-Volatile Organics;
Please note that due to a limitation of characters inherent in the reporting software, some characters of the client identification above were truncated.

The laboratory noted no exceptions to method quality control requirements for this analytical work.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 001 and ending with page 9le.

Norcross, GA 30071

Re: Laboratory Project No. 20031
Case: 20031; SDG: 80293

Dear Mr. Fuller:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on October 23, 2000. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 10/23/00	ETR No: 80293	
434688	029ACAIA10180005	10/18/00	Air
434689	029ACA2IA10180005	10/18/00	Air
434690	029ACAEA10180005	10/18/00	Air

Method TO-14A Modified-Volatile Organics;
Please note that due to a limitation of characters inherent in the reporting software, some characters of the client identification above were truncated.

The laboratory noted no exceptions to method quality control requirements for this analytical work.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 001 and ending with page 9 (1).

I certify that this package is in compliance with the NELAC requirements, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Director or his designee, as verified by the following signature.

Sincerely,

Christopher A. Ouellette
Laboratory Director

The following Qualifiers may be used when reporting any Organic parameters analyzed by Gas Chromatography/mass Spectometry (GCMS). Any additional qualifiers used in the reports will be described in the case narrative. These flags are based on the EPA Contract Laboratory Program statement of work.

GC/MS Qualifiers

A- The reported Tentatively Identified Compound (TIC) is a suspected Aldol-condensation product.

B- The reported analyte was detected in the associated method blank as well as the sample.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. This flag alerts data users that any discrepancies between the concentrations reported for the dilutions may be due to dilution of the sample or extract. It additionally indicates that spike recoveries may have been diluted below quantifiable levels.

E- Compound quantitation is above the instrument's calibration range for this analysis.

J - Indicates an estimated value. This flag is used when the result is less than the reporting limit, but > ½ reporting limit.

U- Indicates compound was analyzed for but not detected above the reporting limit.

X,Y,Z - Laboratory defined flags. These flags must be fully described, and such description attached to the Sample Data Summary Package and the case Narrative. Begin by using "X" and go on to "Y" as necessary. These flags may also be used to combine several flags, as needed.

November 29, 2000

Mr. David Fuller
Accura Analytical Laboratories
6017 Financial Drive
Norcross, GA 30071

Re: Laboratory Project No. 20031
Case: 20031; SDG: 80694

Dear Mr. Fuller:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on November 16, 2000. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 11/16/00	ETR No: 80694	
438420	029ACAIA11130006	11/13/00	Air
438421	029ACA2IA11130006	11/13/00	Air
438422	029ACAEA11130006	11/13/00	Air

Method TO-14A Modified-Volatile Organics;
Please note that due to a limitation of characters inherent in the reporting software, some characters of the client identification above were truncated.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 001 and ending with page 129.

I certify that this package is in compliance with the NELAC requirements, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Director or his designee, as verified by the following signature.

Sincerely,

Christopher A. Ouellette
Laboratory Director

Mr. David Fuller
Accura Analytical Laboratories
6017 Financial Drive
Norcross, GA 30071

Re: Laboratory Project No. 20031
Case: 20031; SDG: 80694

Dear Mr. Fuller:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on November 16, 2000. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 11/16/00	ETR No: 80694	
438420	029ACAIA11130006	11/13/00	Air
438421	029ACA2IA11130006	11/13/00	Air
438422	029ACAEA11130006	11/13/00	Air

Method TO-14A Modified-Volatile Organics;
Please note that due to a limitation of characters inherent in the reporting software, some characters of the client identification above were truncated.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 001 and ending with page 129.

I certify that this package is in compliance with the NELAC requirements, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Director or his designee, as verified by the following signature.

Sincerely,

Christopher A. Ouellette
Laboratory Director

SEVERN TRENT SERVICES

The following Qualifiers may be used when reporting any Organic parameters analyzed by Gas Chromatography/mass Spectometry (GCMS). Any additional qualifiers used in the reports will be described in the case narrative. These flags are based on the EPA Contract Laboratory Program statement of work.

GC/MS Qualifiers

A- The reported Tentatively Identified Compound (TIC) is a suspected Aldol-condensation product.

B- The reported analyte was detected in the associated method blank as well as the sample.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. This flag alerts data users that any discrepancies between the concentrations reported for the dilutions may be due to dilution of the sample or extract. It additionally indicates that spike recoveries may have been diluted below quantifiable levels.

E- Compound quantitation is above the instrument's calibration range for this analysis.

J - Indicates an estimated value. This flag is used when the result is less than the reporting limit, but > ½ reporting limit.

U- Indicates compound was analyzed for but not detected above the reporting limit.

X,Y,Z - Laboratory defined flags. These flags must be fully described, and such description attached to the Sample Data Summary Package and the case Narrative. Begin by using "X" and go on to "Y" as necessary. These flags may also be used to combine several flags, as needed.

Norcross, GA 30071

Re: Laboratory Project No. 20031
Case: 20031; SDG: 81024

Dear Mr. Fuller:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on December 15, 2000. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 12/15/00 ETR No: 81024		
440589	029ACAIA12110007	12/11/00	Air
440590	029ACA2IA12110007	12/11/00	Air
440591	029ACAEA12110007	12/11/00	Air

Method TO-14A Modified-Volatile Organics;
Please note that due to a limitation of characters inherent in the reporting software, some characters of the client identification above were truncated.

The laboratory noted no exceptions to method quality control requirements for this analytical work.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 001 and ending with page 121.

I certify that this package is in compliance with the NELAC requirements, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Director or his designee, as verified by the following signature.

Sincerely,

Christopher A. Ouellette
Laboratory Director

Re: Laboratory Project No. 20031
Case: 20031; SDG: 81024

Dear Mr. Fuller:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on December 15, 2000. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 12/15/00	ETR No: 81024	
440589	029ACAIA12110007	12/11/00	Air
440590	029ACA2IA12110007	12/11/00	Air
440591	029ACAEA12110007	12/11/00	Air

Method TO-14A Modified-Volatile Organics;
Please note that due to a limitation of characters inherent in the reporting software, some characters of the client identification above were truncated.

The laboratory noted no exceptions to method quality control requirements for this analytical work.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 001 and ending with page 121.

The following Qualifiers may be used when reporting any Organic parameters analyzed by Gas Chromatography/mass Spectometry (GCMS). Any additional qualifiers used in the reports will be described in the case narrative. These flags are based on the EPA Contract Laboratory Program statement of work.

GC/MS Qualifiers

A- The reported Tentatively Identified Compound (TIC) is a suspected Aldol-condensation product.

B- The reported analyte was detected in the associated method blank as well as the sample.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. This flag alerts data users that any discrepancies between the concentrations reported for the dilutions may be due to dilution of the sample or extract. It additionally indicates that spike recoveries may have been diluted below quantifiable levels.

E- Compound quantitation is above the instrument's calibration range for this analysis.

J - Indicates an estimated value. This flag is used when the result is less than the reporting limit, but > ½ reporting limit.

U- Indicates compound was analyzed for but not detected above the reporting limit.

X,Y,Z - Laboratory defined flags. These flags must be fully described, and such description attached to the Sample Data Summary Package and the case Narrative. Begin by using "X" and go on to "Y" as necessary. These flags may also be used to combine several flags, as needed.

Re: Laboratory Project No. 20031
Case: 20031; SDG: 81391

Dear Ms. Hogue:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on January 19, 2001. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 01/19/01 ETR No: 81391		
442842	029ACAIA01170108	01/17/01	Air
442843	029ACA2IA01170108	01/17/01	Air
442844	029ACAEA01170108	01/17/01	Air

Method TO-14A Modified-Volatile Organics;
Please note that due to a limitation of characters inherent in the reporting software, some characters of the client identification above were truncated.

The laboratory noted no exceptions to method quality control requirements for this analytical work.

Please note that client specific matrix spike/matrix spike duplicate samples were not performed, nor requested with this sample delivery group.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 001 and ending with page 131.

Re: Laboratory Project No. 20031
Case: 20031; SDG: 81391

Dear Ms. Hogue:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on January 19, 2001. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 01/19/01	ETR No: 81391	
442842	029ACAIA01170108	01/17/01	Air
442843	029ACA2IA01170108	01/17/01	Air
442844	029ACAEA01170108	01/17/01	Air

Method TO-14A Modified-Volatile Organics;
Please note that due to a limitation of characters inherent in the reporting software, some characters of the client identification above were truncated.

The laboratory noted no exceptions to method quality control requirements for this analytical work.

Please note that client specific matrix spike/matrix spike duplicate samples were not performed, nor requested with this sample delivery group.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 001 and ending with page 131.

I certify that this package is in compliance with the NELAC requirements, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Director or his designee, as verified by the following signature.

Sincerely,

Christopher A. Ouellette
Laboratory Director

The following Qualifiers may be used when reporting any Organic parameters analyzed by Gas Chromatography/mass Spectometry (GCMS). Any additional qualifiers used in the reports will be described in the case narrative. These flags are based on the EPA Contract Laboratory Program statement of work.

GC/MS Qualifiers

A- The reported Tentatively Identified Compound (TIC) is a suspected Aldol-condensation product.

B- The reported analyte was detected in the associated method blank as well as the sample.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. This flag alerts data users that any discrepancies between the concentrations reported for the dilutions may be due to dilution of the sample or extract. It additionally indicates that spike recoveries may have been diluted below quantifiable levels.

E- Compound quantitation is above the instrument's calibration range for this analysis.

J - Indicates an estimated value. This flag is used when the result is less than the reporting limit, but > ½ reporting limit.

U- Indicates compound was analyzed for but not detected above the reporting limit.

X,Y,Z - Laboratory defined flags. These flags must be fully described, and such description attached to the Sample Data Summary Package and the case Narrative. Begin by using "X" and go on to "Y" as necessary. These flags may also be used to combine several flags, as needed.

Re: Laboratory Project No. 20020
Project Name: NAS Jacksonville, FL
Case: 20020; SDG: 81932; Job: CTO0029

Dear Ms. Hogue:

Enclosed are the results of analyses performed on samples received at Severn Trent Laboratories on March 1, 2001. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 03/01/01 ETR No: 81932		
446442	029SVEEA02260109	02/26/01	Air

Method TO-14A Modified-Volatile Organics;
Due to a limitation of characters inherent in the reporting software, some characters of the client identifications above were truncated.

No exceptions to the method quality control requirements were noted during anysis.

Please note that client specific matrix spike/matrix spike duplicate samples were not performed, nor requested with this sample delivery group.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 0001 and ending with page 0051.

STL Burlington is a part of Severn Trent Laboratories, Inc.

Re: Laboratory Project No. 20020
Project Name: NAS Jacksonville, FL
Case: 20020; SDG: 81932; Job: CTO0029

Dear Ms. Hogue:

Enclosed are the results of analyses performed on samples received at Severn Trent Laboratories on March 1, 2001. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 03/01/01 ETR No: 81932		
446442	029SVEEA02260109	02/26/01	Air

Method TO-14A Modified-Volatile Organics;
Due to a limitation of characters inherent in the reporting software, some characters of the client identifications above were truncated.

No exceptions to the method quality control requirements were noted during anysis.

Please note that client specific matrix spike/matrix spike duplicate samples were not performed, nor requested with this sample delivery group.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 0001 and ending with page 0091.

STL Burlington is a part of Severn Trent Laboratories, Inc.

I certify that this package is in compliance with the NELAC requirements, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Director or his designee, as verified by the following signature.

Sincerely,

Christopher A. Ouellette
Laboratory Director

The following Qualifiers may be used when reporting any Organic parameters analyzed by Gas Chromatography/mass Spectometry (GCMS). Any additional qualifiers used in the reports will be described in the case narrative. These flags are based on the EPA Contract Laboratory Program statement of work.

GC/MS Qualifiers

A- The reported Tentatively Identified Compound (TIC) is a suspected Aldol-condensation product.

B- The reported analyte was detected in the associated method blank as well as the sample.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. This flag alerts data users that any discrepancies between the concentrations reported for the dilutions may be due to dilution of the sample or extract. It additionally indicates that spike recoveries may have been diluted below quantifiable levels.

E- Compound quantitation is above the instrument's calibration range for this analysis.

J - Indicates an estimated value. This flag is used when the result is less than the reporting limit, but > ½ reporting limit.

U- Indicates compound was analyzed for but not detected above the reporting limit.

X,Y,Z - Laboratory defined flags. These flags must be fully described, and such description attached to the Sample Data Summary Package and the case Narrative. Begin by using "X" and go on to "Y" as necessary. These flags may also be used to combine several flags, as needed.

Norcross, GA 30071

Re: Laboratory Project No. 20031
Case: 20031; SDG: 82093

Dear Ms. Hogue:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on March 15, 2001. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 03/15/01	ETR No: 82093	
447347	029SVEEA03120110	03/12/01	Air

Method TO-14A Modified-Volatile Organics;
The volatile organic analyses of the blank spike and blank spike duplicate samples, W6_LCS, exhibited percent recoveries of the target compound Methylene Chloride, which were marginally below the control criteria. These exceedences are identified on the associated Form IIIs.

Please note that client specific matrix spike/matrix spike duplicate samples were not performed, nor requested with this sample delivery group.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 0001 and ending with page 0106.

STL Burlington is a part of Severn Trent Laboratories, Inc.

Re: Laboratory Project No. 20031
Case: 20031; SDG: 82093

Dear Ms. Hogue:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on March 15, 2001. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 03/15/01	ETR No: 82093	
447347	029SVEEA03120110	03/12/01	Air

Method TO-14A Modified-Volatile Organics;
The volatile organic analyses of the blank spike and blank spike duplicate samples, W6_LCS, exhibited percent recoveries of the target compound Methylene Chloride, which were marginally below the control criteria. These exceedences are identified on the associated Form IIIs.

Please note that client specific matrix spike/matrix spike duplicate samples were not performed, nor requested with this sample delivery group.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 0001 and ending with page 0106.

STL Burlington is a part of Severn Trent Laboratories, Inc.

The following Qualifiers may be used when reporting any Organic parameters analyzed by Gas Chromatography/mass Spectometry (GCMS). Any additional qualifiers used in the reports will be described in the case narrative. These flags are based on the EPA Contract Laboratory Program statement of work.

GC/MS Qualifiers

A- The reported Tentatively Identified Compound (TIC) is a suspected Aldol-condensation product.

B- The reported analyte was detected in the associated method blank as well as the sample.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. This flag alerts data users that any discrepancies between the concentrations reported for the dilutions may be due to dilution of the sample or extract. It additionally indicates that spike recoveries may have been diluted below quantifiable levels.

E- Compound quantitation is above the instrument's calibration range for this analysis.

J - Indicates an estimated value. This flag is used when the result is less than the reporting limit, but > ½ reporting limit.

U- Indicates compound was analyzed for but not detected above the reporting limit.

X,Y,Z - Laboratory defined flags. These flags must be fully described, and such description attached to the Sample Data Summary Package and the case Narrative. Begin by using "X" and go on to "Y" as necessary. These flags may also be used to combine several flags, as needed.

Accura Analytical Laboratories
6017 Financial Drive
Norcross, GA 30071

Re: Laboratory Project No. 20031
Case: 20031; SDG: 82724

Dear Ms. Hogue:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on April 30, 2001. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 04/30/01	ETR No: 82724	
451721	029SVEEA04260111	04/26/01	Air

Method TO-14A Modified-Volatile Organics;
Please note that due to a limitation of characters inherent in the reporting software, some characters of the client identification above were truncated.

The volatile organic analyses of the Independent Calibration Verification sample C2_ICVLCS and duplicate sample exhibited a percent recoveries of the target compound Tetrachloroethene that were above control criteria. This exceedence is identified on the associated Form IIIs.

Please note that client specific matrix spike/matrix spike duplicate samples were not performed, nor requested with this sample delivery group.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 0001 and ending with page 91.

Ms. Bonnie Hogue
Accura Analytical Laboratories
6017 Financial Drive
Norcross, GA 30071

Re: Laboratory Project No. 20031
Case: 20031; SDG: 82724

Dear Ms. Hogue:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on April 30, 2001. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 04/30/01	ETR No: 82724	
451721	029SVEEA04260111	04/26/01	Air

Method TO-14A Modified-Volatile Organics;
Please note that due to a limitation of characters inherent in the reporting software, some characters of the client identification above were truncated.

The volatile organic analyses of the Independent Calibration Verification sample C2_ICVLCS and duplicate sample exhibited a percent recoveries of the target compound Tetrachloroethene that were above control criteria. This exceedence is identified on the associated Form IIIs.

Please note that client specific matrix spike/matrix spike duplicate samples were not performed, nor requested with this sample delivery group.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 0001 and ending with page 91.

STL Burlington is a part of Severn Trent Laboratories, Inc.

The following Qualifiers may be used when reporting any Organic parameters analyzed by Gas Chromatography/mass Spectometry (GCMS). Any additional qualifiers used in the reports will be described in the case narrative. These flags are based on the EPA Contract Laboratory Program statement of work.

GC/MS Qualifiers

A- The reported Tentatively Identified Compound (TIC) is a suspected Aldol-condensation product.

B- The reported analyte was detected in the associated method blank as well as the sample.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. This flag alerts data users that any discrepancies between the concentrations reported for the dilutions may be due to dilution of the sample or extract. It additionally indicates that spike recoveries may have been diluted below quantifiable levels.

E- Compound quantitation is above the instrument's calibration range for this analysis.

J - Indicates an estimated value. This flag is used when the result is less than the reporting limit, but > ½ reporting limit.

U- Indicates compound was analyzed for but not detected above the reporting limit.

X,Y,Z - Laboratory defined flags. These flags must be fully described, and such description attached to the Sample Data Summary Package and the case Narrative. Begin by using "X" and go on to "Y" as necessary. These flags may also be used to combine several flags, as needed.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

4a Express Package Service — Packages up to 150 lbs. Delivery commitment may be later in some areas

- FedEx Priority Overnight — Next business morning
- FedEx Standard Overnight — Next business afternoon
- FedEx First Overnight — Earliest next business morning delivery to select locations
- ☐ FedEx 2Day — Second business day. FedEx Envelope rate not available. Minimum charge. One-pound rate
- FedEx Express Saver — Third business day
- NEW FedEx Extra Hours — Later drop off with next business afternoon delivery for select locations

4b Express Freight Service — Packages over 150 lbs. Delivery commitment may be later in some areas

- FedEx 1Day Freight* — Next business day
- FedEx 2Day Freight — Second business day
- FedEx 3Day Freight — Third business day

* Call for Confirmation. * Declared value limit $500

5 Packaging

- FedEx Envelope*
- FedEx Pak* — Includes FedEx Small Pak, FedEx Large Pak, and FedEx Sturdy Pak
- ☐ Other Pkg — Includes FedEx Box, FedEx Tube, and customer pkg

6 Special Handling — Include FedEx address in Section 3

- SATURDAY Delivery — Available only for FedEx Priority Overnight and FedEx 2Day to select ZIP codes
- SUNDAY Delivery — Available only for FedEx Priority Overnight to select ZIP codes
- HOLD Weekday at FedEx Location — Not available with FedEx First Overnight
- HOLD Saturday at FedEx Location — Available only for FedEx Priority Overnight and FedEx 2Day to select locations

Does this shipment contain dangerous goods? One box must be checked

- ☒ No
- Yes — As per attached Shipper's Declaration

Ms. Bonnie Hogue
Accura Analytical Laboratories
6017 Financial Drive
Norcross, GA 30071

Re: Laboratory Project No. 20031
Case: 20031; SDG: 83075

Dear Ms. Hogue:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on May 23, 2001. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 05/23/01 ETR No: 83075		
454594	029SVEEA05210112	05/21/01	Air

Method TO-14A Modified-Volatile Organics;
Please note that due to a limitation of characters inherent in the reporting software, some characters of the client identification above were truncated.

The volatile organic analyses of the blank spike sample E7_LCS and duplicate sample exhibited percent recoveries of the target compounds Chloromethane and Toluene that were below the control criteria. These exceedences are identified on the associated Form IIIs.

Please note that client specific matrix spike/matrix spike duplicate samples were not performed, nor requested with this sample delivery group.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 0001 and ending with page 110.

Norcross, GA 30071

Re: Laboratory Project No. 20031
Case: 20031; SDG: 83075

Dear Ms. Hogue:

Enclosed are the analytical results of samples received intact by Severn Trent Laboratories on May 23, 2001. Laboratory numbers have been assigned and designated as follows:

Lab ID	Client Sample ID	Sample Date	Sample Matrix
	Received: 05/23/01 ETR No: 83075		
454594	029SVEEA05210112	05/21/01	Air

Method TO-14A Modified-Volatile Organics;
Please note that due to a limitation of characters inherent in the reporting software, some characters of the client identification above were truncated.

The volatile organic analyses of the blank spike sample E7_LCS and duplicate sample exhibited percent recoveries of the target compounds Chloromethane and Toluene that were below the control criteria. These exceedences are identified on the associated Form IIIs.

Please note that client specific matrix spike/matrix spike duplicate samples were not performed, nor requested with this sample delivery group.

If there are any questions regarding this submittal, please contact Ron Pentkowski at (802) 655-1203.

This report shall not be reproduced, except in full, without the written approval of the laboratory. This report is sequentially numbered starting with page 0001 and ending with page 110.

The following Qualifiers may be used when reporting any Organic parameters analyzed by Gas Chromatography/mass Spectometry (GCMS). Any additional qualifiers used in the reports will be described in the case narrative. These flags are based on the EPA Contract Laboratory Program statement of work.

GC/MS Qualifiers

A- The reported Tentatively Identified Compound (TIC) is a suspected Aldol-condensation product.

B- The reported analyte was detected in the associated method blank as well as the sample.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. This flag alerts data users that any discrepancies between the concentrations reported for the dilutions may be due to dilution of the sample or extract. It additionally indicates that spike recoveries may have been diluted below quantifiable levels.

E- Compound quantitation is above the instrument's calibration range for this analysis.

J - Indicates an estimated value. This flag is used when the result is less than the reporting limit, but > ½ reporting limit.

U- Indicates compound was analyzed for but not detected above the reporting limit.

X,Y,Z - Laboratory defined flags. These flags must be fully described, and such description attached to the Sample Data Summary Package and the case Narrative. Begin by using "X" and go on to "Y" as necessary. These flags may also be used to combine several flags, as needed.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
Q - Qualifier signal failed the ratio test.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

CASE NARRATIVE for Project Number: 23975
Client Project: 103 RD ST. BASELINE G.W. Sampling / 083 CTO 029

The following items were noted concerning this project:

1. The samples were received at 2°C.

2. The following samples required dilution due to high analyte concentration, resulting in elevated detection limits:
   VOC SW-846-8260B
   029-SMW04-Q1-00
   029-SMW11-Q1-00

3. The following surrogate was outside the method specified limits due to matrix interference:
   VOC SW-846-8260B
   Bromofluorobenzene 029-SMW05-Q1-00

4. For the following samples, C(39) surrogate was outside the method specified limits but within the established in-house limits:
   FL-PRO
   Method Blank
   Laboratory Control Sample (LCS)

5. For the following samples, o-Terphenyl and C(39) surrogates were outside the method specified limits but within the established in-house limits:
   FL-PRO

029-SMW02-Q1-00	029-SMW08-Q1-00
029-SMW04-Q1-00	029-SMW09-Q1-00
029-SMW05-Q1-00	029-DMW01-Q1-00
029-SMW07-Q1-00	029-DUP01-Q1-00

6. For the following samples, o-Terphenyl surrogate was outside the method specified limits but within the established in-house limits:
   FL-PRO
   029-SMW01-Q1-00
   029-SMW03-Q1-00
   029-SMW10-Q1-00
   029-SMW11-Q1-00
   029-SMW12-Q1-00

This report may not be duplicated, except in full, without written permission from Accura Analytical Laboratory, Inc.

7. The following analysis was performed by a subcontract laboratory:
   PAH SW-846-8310

8. The following samples required dilution due to high analyte concentration and/or the nature of the matrix, resulting in elevated detection limits:
   PAH SW-846-8310
   029-SMW04-Q1-00
   029-SMW11-Q1-00

9. The J flags noted for the VOC and FL-PRO analyses indicate estimated values in which the compounds are present at concentrations that are less than the quantitation limit, but above the method detection limit. These results should be considered estimated.

10. The B flags noted for the VOC and FL-PRO analyses indicate that the analyte was detected in the method blank at a concentration above the MDL, and the samples had concentrations that were less than ten times the reported hit in the method blank. These results should be considered estimated.

11. The matrix spike and/or matrix spike duplicate recoveries were outside the project specific acceptance limits for the following analytes due to matrix interference:
   PAH SW-846-8310

Acenaphthene	(MSD)
Dibenzo (a,h) anthracene	(MS/MSD)

12. The LCS recovery for the FL-PRO analysis was outside the project specific limits, but within the established in-house limits; therefore the data satisfies the method requirement.

ACCURA ANALYTICAL LABORATORY, INC. - STANDARD TERMS AND CONDITIONS

1.0 General

1.1) Accura Analytical Labs, Inc. "AAL" is the laboratory being contracted. The ' Client " is our valued Client. Our agreement with the Client is made up of these Standard Terms, any written proposal or confirmation letter, and our pricing documents.

2.0 AAL General Responsibilities

2.1) AAL agrees to provide the Client professional environmental services. AAL will provide written reports containing analytical results produced in conformance with agreed upon testing criteria In performing our services, AAL will use that degree of care and skill ordinarily exercised under similar circumstances by reputable members of our profession

2.2) Tests and observations will be conducted in accordance with appropriate test procedures and laboratory protocols. If the Client specifies tests that vary from AAL's standard or recommended procedures, the Client agrees to hold AAL harmless from all claims, damages, and expenses arising from Client's direction.

2.3) AAL will not release information regarding our services for the Client or any information that AAI received from the Client unless authorized in writing, except for information that is in the public domain and except as we are required by law AAL agrees to comply with more restrictive confidentiality requirements, if requested in writing

3.0 Clients General Responsibilities

3.1) Likewise, the Client will not use AAL's name and/or data in any manner which might cause harm to the company's reputation and/or business. Under no circumstances is the name of AAL, to be published, either alone or in association will that of any other party, without prior written approval from AAL

3 2) The Client will assign a representative(s) who has authority to transmit instructions, receive information, make decisions relative to AAL's work.

3.3) The Client will provide warnings on all samples that are suspected of containing chemical or radioactive hazards This information shall be given to AAL in writing as a part of the order prior to shipment of the samples Copies shall also accompany the samples

4.0 Delivery and Acceptance of Samples

4.1) Until AAL accepts delivery of samples by notation on a chain-of -custody document or otherwise in writing accepts the Client's samples. AAL is not responsible for damage or loss to samples.

4.2) The Client agrees that samples delivered after **10:30 AM** or with one half of the holding time expired, may be subject to a rush fee, if required In the event the samples are received after **10:30 AM**, the turnaround time will begin the following working day Turnaround times for requested analyses should be stated in working days.

4.3) Samples remain the property of the Client at all times. Samples will be properly disposed by AAL 90 days after the sampling date, unless prior written arrangement has been made with AAL to return the materials to the Client at the Client's expense. All samples classified as mixed wastes will be returned to the Client.

5.0 Changes to Orders

5 1) Only designated representatives for each order are authorized to act regarding changes to an order AAL will only accept changes to an order from the Client's designated representative(s)

5.2) AAL will notify the Client of any activity that AAL regards as a change to the terms and conditions of an order Depending upon the nature of the change, AAL may request a revised Client Confirmation Letter or contract amendment.

5.3) The Client will respond to this notification and any request for a revised Client Confirmation Letter or contract amendment within reasonable time to allow analyses to be completed within the holding time

5.4) Orders may be terminated in writing by either party AAL shall be compensated for expenses incurred and for services that are already in process and cannot be reasonable avoided

6 0 Compensation

6.1) AAL pricing is predicated upon the Client's acceptance of the conditions and allocations of risks and responsibilities described in this Agreement. The Client agrees to pay for services as presented in AAL s proposal or Client confirmation letter and accepted by the Client, or according to AAL's current pricing if there is no other written pricing agreement

6 2) The Client agrees to pay invoices within 30 days Past due amounts are subject to a late payment penalty of one and one-half (1.5%) percent per month, but not to exceed the maximum rate allowed by law .Attorneys' fees and other costs incurred in the collecting past due amounts shall be paid by the Client.

6 3) The Client's obligation to pay for the services contracted is in no way dependent or conditioned upon the Client's ability to obtain financing, approval of governmental or regulatory agencies, or upon the Client's successful completion of the project

6.4) The Client agrees to compensate AAL for our services and normally reimbursable expenses if AAL is required to respond to legal process related to AAL services for the Client Compensated services include hourly charges for all personnel involved in the response and attorney fees reasonably incur in obtaining advice concerning the response, the preparation of the testifier, and appearances related to the legal process.

7.0 Miscellaneous Provisions

7.1) AAL may subcontract laboratory procedures as AAL deems necessary to meet AAL obligations to Client.

7 2) Neither Client nor AAL shall have any liability for nonperformance caused in whole or in part by causes beyond our reasonable control. Such causes include but are not limited to Acts of God, civil unrest and war, labor unrest and strikes, acts of authorities

7.3) If any of the provisions of this Agreement are held to be invalid or unenforceable in any respect, the remaining terms shall be in full effect and shall be construed as if the invalid or unenforceable matters were never included in it. No waiver of any default shall be a waiver of any future default.

7.4) Due to limited space on this chain of custody document, complete terms and conditions are available upon request. Contact the laboratory for a complete copy.

ACCURA ANALYTICAL LABORATORY, INC. - STANDARD TERMS AND CONDITIONS

1.0 General

1.1) Accura Analytical Labs, Inc. "AAL" is the laboratory being contracted. The "Client" is our valued Client. Our agreement with the Client is made up of these Standard Terms, any written proposal or confirmation letter, and our pricing documents.

2.0 AAL General Responsibilities

2.1) AAL agrees to provide the Client professional environmental services. AAL will provide written reports containing analytical results produced in conformance with agreed upon testing criteria. In performing our services, AAL will use that degree of care and skill ordinarily exercised under similar circumstances by reputable members of our profession

2.2) Tests and observations will be conducted in accordance with appropriate test procedures and laboratory protocols. If the Client specifies tests that vary from AAL's standard or recommended procedures, the Client agrees to hold AAL harmless from all claims, damages, and expenses arising from Client's direction.

2.3) AAL will not release information regarding our services for the Client or any information that AAL received from the Client unless authorized in writing, except for information that is in the public domain and except as we are required by law. AAL agrees to comply with more restrictive confidentiality requirements, if requested in writing

3.0 Clients General Responsibilities

3.1) Likewise, the Client will not use AAL's name and/or data in any manner which might cause harm to the company's reputation and/or business. Under no circumstances is the name of AAL, to be published, either alone or in association will that of any other party, without prior written approval from AAL.

3.2) The Client will assign a representative(s) who has authority to transmit instructions, receive information, make decisions relative to AAL's work

3.3) The Client will provide warnings on all samples that are suspected of containing chemical or radioactive hazards. This information shall be given to AAL in writing as a part of the order prior to shipment of the samples. Copies shall also accompany the samples

4.0 Delivery and Acceptance of Samples

4.1) Until AAL accepts delivery of samples by notation on a chain-of-custody document or otherwise in writing accepts the Client's samples, AAL is not responsible for damage or loss to samples

4.2) The Client agrees that samples delivered after **10:30 AM** or with one half of the holding time expired, may be subject to a rush fee, if required. In the event the samples are received after **10:30 AM**, the turnaround time will begin the following working day. Turnaround times for requested analyses should be stated in working days.

4.3) Samples remain the property of the Client at all times. Samples will be properly disposed by AAL 90 days after the sampling date, unless prior written arrangement has been made with AAL to return the materials to the Client at the Client's expense. All samples classified as mixed wastes will be returned to the Client.

5.0 Changes to Orders

5.1) Only designated representatives for each order are authorized to act regarding changes to an order AAL will only accept changes to an order from the Client's designated representative(s)

5.2) AAL will notify the Client of any activity that AAL regards as a change to the terms and conditions of an order. Depending upon the nature of the change, AAL may request a revised Client Confirmation Letter or contract amendment.

5.3) The Client will respond to this notification and any request for a revised Client Confirmation Letter or contract amendment within reasonable time to allow analyses to be completed within the holding time

5.4) Orders may be terminated in writing by either party. AAL shall be compensated for expenses incurred and for services that are already in process and cannot be reasonable avoided

6.0 Compensation

6.1) AAL pricing is predicated upon the Client's acceptance of the conditions and allocations of risks and responsibilities described in this Agreement. The Client agrees to pay for services as presented in AAL's proposal or Client confirmation letter and accepted by the Client, or according to AAL's current pricing if there is no other written pricing agreement

6.2) The Client agrees to pay invoices within 30 days. Past due amounts are subject to a late payment penalty of one and one-half (1.5%) percent per month, but not to exceed the maximum rate allowed by law. Attorneys' fees and other costs incurred in the collecting past due amounts shall be paid by the Client.

6.3) The Client's obligation to pay for the services contracted is in no way dependent or conditioned upon the Client's ability to obtain financing, approval of governmental or regulatory agencies, or upon the Client's successful completion of the project

6.4) The Client agrees to compensate AAL for our services and normally reimbursable expenses if AAL is required to respond to legal process related to AAL services for the Client. Compensated services include hourly charges for all personnel involved in the response and attorney fees reasonably incur in obtaining advice concerning the response, the preparation of the testifier, and appearances related to the legal process.

7.0 Miscellaneous Provisions

7.1) AAL may subcontract laboratory procedures as AAL deems necessary to meet AAL obligations to Client.

7.2) Neither Client nor AAL shall have any liability for nonperformance caused in whole or in part by causes beyond our reasonable control. Such causes include but are not limited to Acts of God, civil unrest and war, labor unrest and strikes, acts of authorities.

7.3) If any of the provisions of this Agreement are held to be invalid or unenforceable in any respect, the remaining terms shall be in full effect and shall be construed as if the invalid or unenforceable matters were never included in it. No waiver of any default shall be a waiver of any future default.

7.4) Due to limited space on this chain of custody document, complete terms and conditions are available upon request. Contact the laboratory for a complete copy.

IntFile : PRO0914.e
Quant Time: Mar 30 10:41 2000 Quant Results File: PRO0112.RES

Quant Method : C:\HPCHEM\1\METHODS\PRO0112.M (Chemstation Integrator)
Title : FL PRO
Last Update : Thu Mar 09 14:46:05 2000
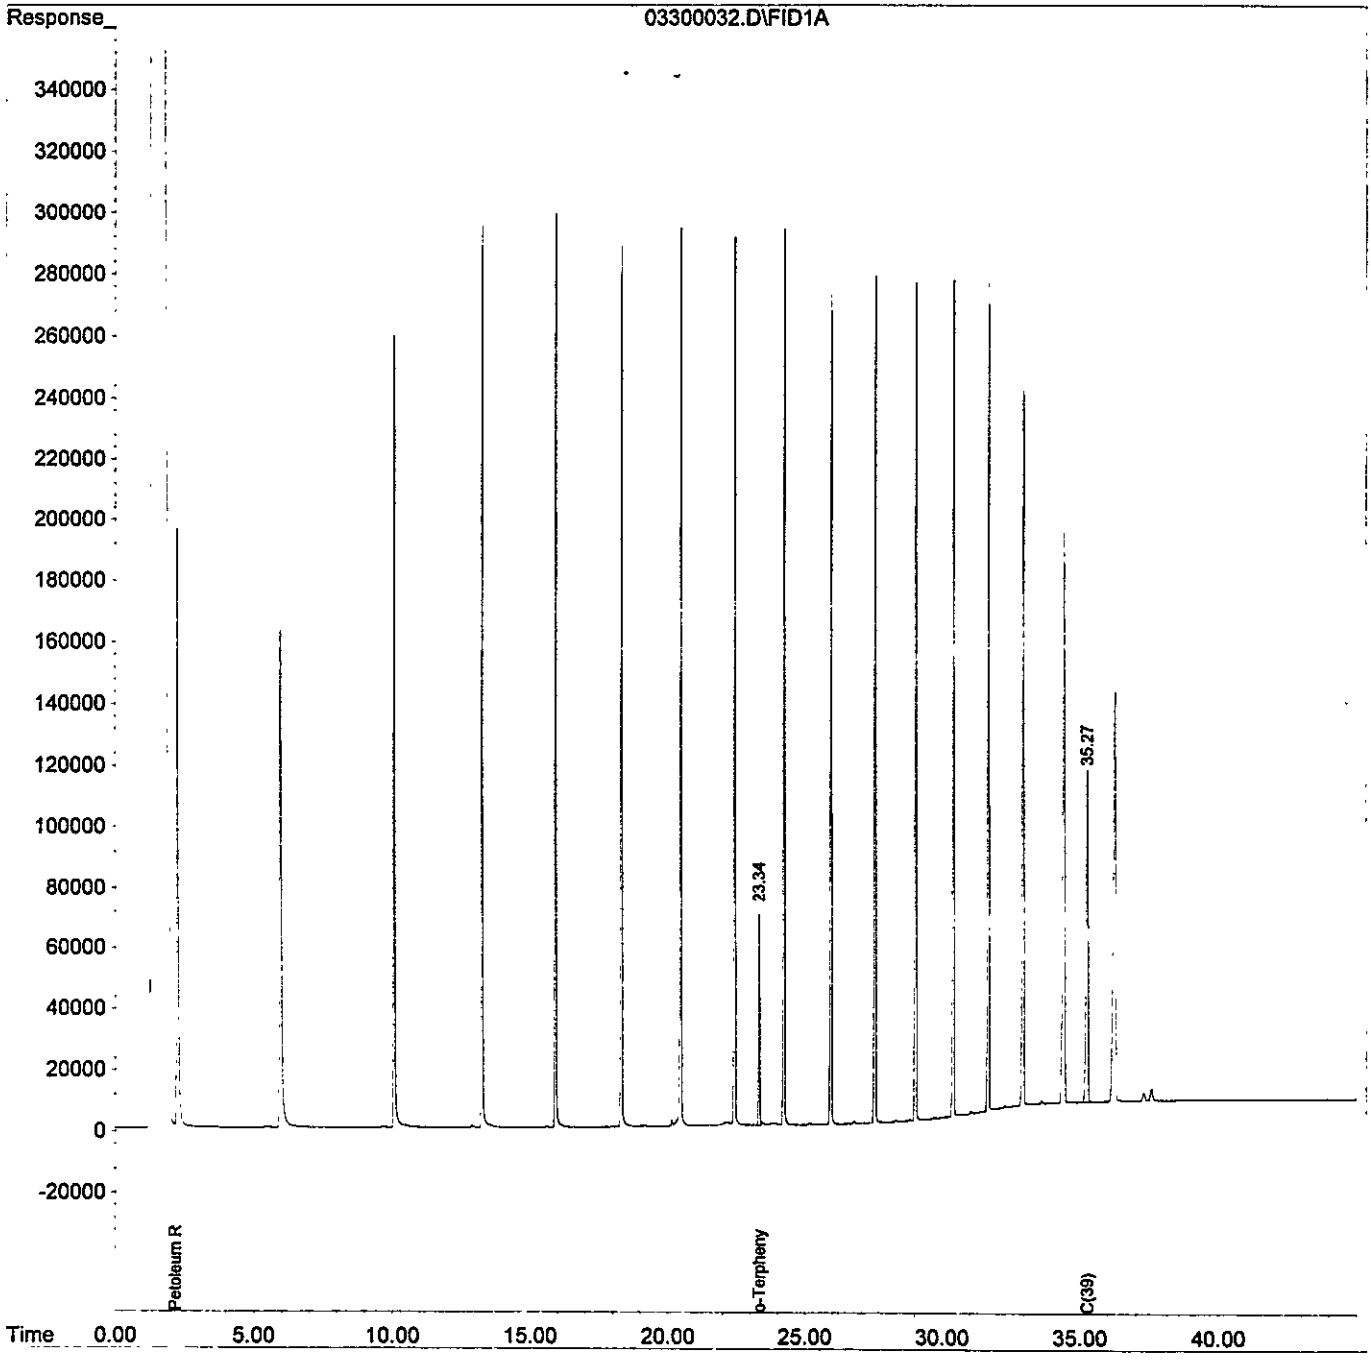
Response via : Multiple Level Calibration
DataAcq Meth : PRO0112.M

Volume Inj. :
Signal Phase :
Signal Info :



Quantitation Report (QT Reviewed)

Data File : C:\HPCHEM\1\DATA\032800\03280014.D Vial: 4
Acq On : 29 Mar 2000 2:05 am Operator: MT
Sample : PROW LCS 0326 Inst : DUAL FID
Misc : Multiplr: 1.00
IntFile : PRO0914.e
Quant Time: Mar 29 10:04 2000 Quant Results File: PRO0112.RES

Quant Method : C:\HPCHEM\1\METHODS\PRO0112.M (Chemstation Integrator)
Title : FL PRO
Last Update : Thu Mar 09 14:46:05 2000
Response via : Initial Calibration
DataAcq Meth : PRO0112.M

Volume Inj. :
Signal Phase :
Signal Info :

Compound	R.T.	Response	Conc Units
System Monitoring Compounds			
2) SC o-Terphenyl	23.38	1774417	42.520 ug/mlm
Spiked Amount 50.000	Recovery =		85.04% ✓MT
3) SC C(39)	35.27	507150	13.198 ug/mlm
Spiked Amount 150.000	Recovery =		8.80% x MT
Target Compounds			
1) HM Petoleum Range Organics	2.15	168212013	3614.772 ug/ml / 1000ml =

3.615/4.25 x 100% =

85% /
MT

RR CCV failed

(f)=RT Delta > 1/2 Window (m)=manual int.
