RE: Draft Monitoring Only Groundwater Report, 1<sup>st</sup> Annual, 1<sup>st</sup> Year (March and September 2006), Ocala F-18 Crash Site, Naval Air Station Cecil Field

Dear Mr. Davidson:

I have completed my review of the Draft Monitoring Only Groundwater Report, 1<sup>st</sup> Annual, 1<sup>st</sup> Year (March and September 2006), Ocala F-18 Crash Site, Naval Air Station Cecil Field, dated January 3, 2007 (received January 4, 2007), prepared by Tetra Tech NUS, Inc. I have the following comments on the report:

- (1) I could not find the laboratory analytical report in Appendix B corresponding with the detection of benzo(a)anthracene and benzo(b)fluoranthene in groundwater sampled from monitoring well CEF-CS8 in March 2006.
- (2) The laboratory analytical report in Appendix B reports the concentrations of a very limited number of volatile and semi-volatile compounds. For example, on pages 8 and 9 of 60 of the Accutest Laboratory Technical Report, the only volatile compounds reported are benzene, 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene; the only semi-volatile compound reported are benzo(a)pyrene, naphthalene, 1-methylnaphthalene and 2-methylnaphthalene.
- (3) On Figure 5, in the chem-box with the data for monitoring well CEF-CS10, the well is incorrectly identified as CEF-CS1A.

Please address the comments in the final, signed report. If you have any concerns regarding this letter, please contact me at (850) 245-8997.

Mark Davidson  
Ocala F-18 Crash Site
