Tallahassee, Florida 32399-2400

November 1, 1999

Dear Mike,

This letter has been prepared to provide the results of soil boring (OW-SB4A) which was advanced at the Building 200 oil-water separator site to assess an area which previously had excessively contaminated soil. The oil-water separator was removed by the Detachment Charleston in December 1998 and the excavated area did not include the above referenced area of excessively contaminated soil. The soil boring was used to investigate the area north of the excavation which previously had excessively contaminated soil. The location of the soil boring is shown in the attached figure. Soil boring OW-SB4A was screened with an OVA to a depth of 5 feet bls. No excessively contaminated soil was detected in the soil boring. The highest OVA reading was 4 ppm at a depth of 0-1 feet bls.

Therefore, as described in the May 1999 Confirmatory Sampling Report, it is recommended that no further action take place at the oil-water separator 200-OW and Tank 200-OW site.

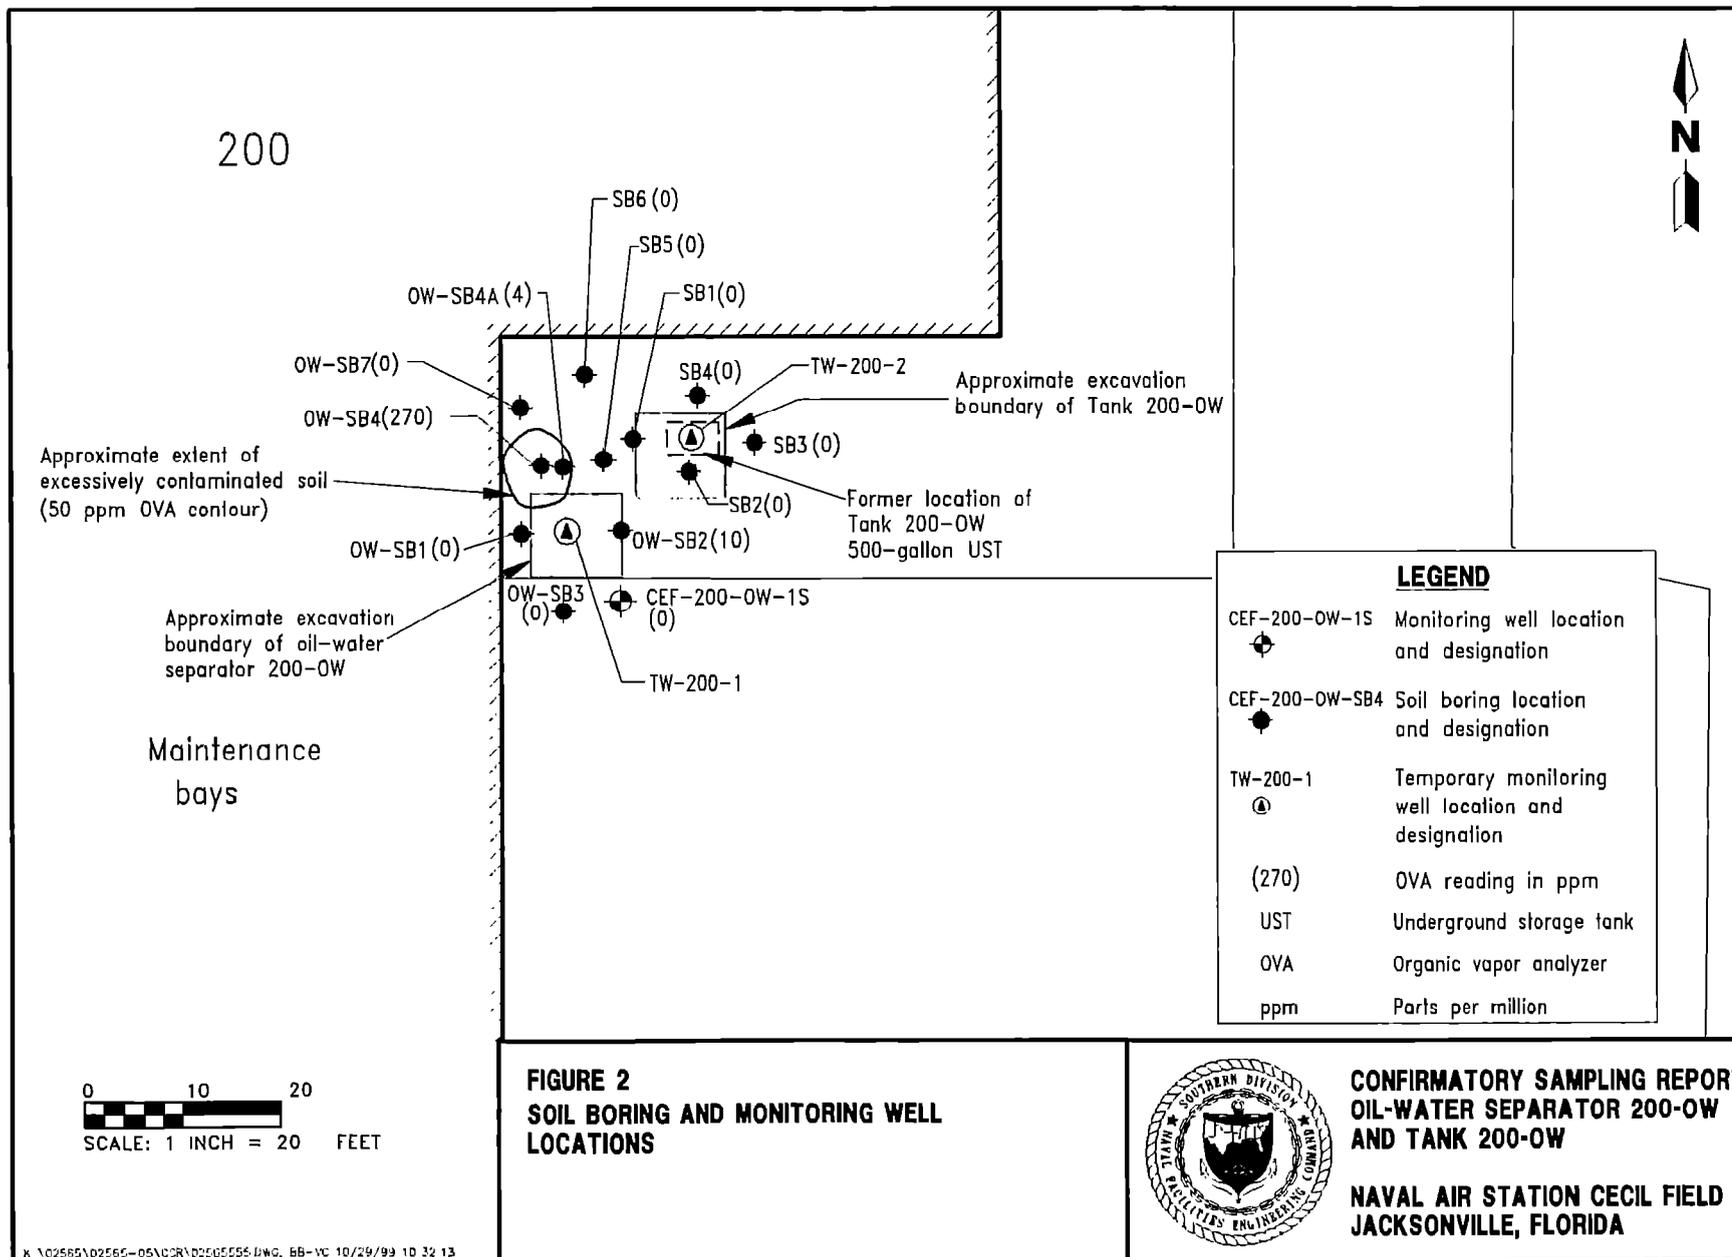

Sincerely,

A handwritten signature in black ink, appearing to read "Eric A. Blomberg".
