RE: Quarterly Groundwater Monitoring Report, 4th Quarter, Year 1 Event - July 2009,
Building 815 Wash Rack Area, Naval Air Station Cecil Field, Jacksonville, Florida

Dear Mr. Art Sanford:

I have completed my review of the Quarterly Groundwater Monitoring Report, 4th Quarter, Year 1 Event - July 2009, Building 815 Wash Rack Area, Naval Air Station Cecil Field, dated December 1, 2009 (received December 4, 2009), prepared and submitted by Tetra Tech NUS, Inc. The naphthalene concentration in monitoring well CEF-815-1S is greater than allowed in the Department's November 6, 2008 Monitored Natural Attenuation Approval Order. However, I concur that groundwater monitoring should continue in order to confirm the increased concentration in CEF-815-1S since naphthalene in that well had before this not exceeded its natural attenuation default concentration for several years.

If you have any concerns regarding this letter, please contact me at (850) 245-8997.

Sincerely,

David P. Grabka, P.G.
