RE: Technical Memorandum for No Further Action, Potential Source  
of Contamination 46, Facilities 72 and 177, Naval Air  
Station Cecil Field, Florida.

Dear Mr. Davidson:

I have completed my review of the Technical Memorandum for No Further Action, Potential Source of Contamination 46 (PSC 46), Facilities 72 and 177, Naval Air Station Cecil Field, dated August 2001 (received September 4, 2001), prepared and submitted by Tetra Tech NUS, Inc. The report documents that 385.55 tons of PAH-contaminated soil was removed and replaced with certified clean fill. While soil removal activities have been conducted in accordance with an approved Action Memorandum, I cannot concur that No Further Action is warranted with regards to soils at the site. Soil removal activities were conducted only to remove contamination to levels protective for a commercial or industrial use setting. As such, land use controls will be required to maintain a non-residential use for the area. A Land Use Control Implementation Plan should be prepared for the site in accordance with the Memorandum of Agreement between the Navy, EPA Region 4 and FDEP. As the Site 36 groundwater plume underlies the site, remedial actions addressing groundwater will be required prior to any reclassification of the BRAC color code for the site.

If you have any concerns regarding this letter, please contact me at (850)921-9991.

Sincerely,

David P. Grabka  
Remedial Project Manager
